

XiXteen

A comprehensive critical thinking curriculum built from 16 skills and objective quiz items.

16 Skills	**2,560** Items	**5** Levels per skill	**160** Items per skill

This curriculum turns the XiXteen item bank into a teachable sequence. Each chapter introduces one critical thinking skill, explains why it matters, gives a solving method, and then presents the full item set with answer feedback and teaching commentary.

Generated from the current XiXteen corpus on 2026-10-29.

How To Use This Curriculum

XiXteen is organized around daily practice: one objective item from each of 16 critical thinking skills. This PDF expands that structure into a curriculum reference for learners, teachers, tutors, debate coaches, and anyone who wants to build a steadier habit of judgment.

Each chapter begins with a rigorous skill introduction and then lists items by difficulty. The feedback is intentionally choice-level: students should learn not only why the right answer is right, but why each tempting alternative is weaker.

Teaching Routine

1. Read the prompt slowly and name the target skill before looking at the choices.

2. Predict the kind of answer the skill calls for: claim, definition, conclusion, assumption, relevance, evidence, source warning, logical gap, fallacy, probability move, statistic, causal caution, alternative explanation, bias, tradeoff, or belief update.

3. Choose an answer, then read every feedback note. The distractor feedback is where much of the learning happens.

4. Use the process commentary to reconstruct the path from prompt to answer.

Curriculum Map

01 What's the Claim? Clarify the Claim Find the exact claim being made.	**09 What's the Fallacy?** Recognize Common Fallacies Match a bad argument to its mistake.
02 What Do the Words Mean? Define Key Terms Find the word or phrase that needs a clearer meaning.	**10 How Likely Is It?** Think Probabilistically Choose the answer that handles chance and uncertainty well.
03 What's the Argument? Find the Argument Find the conclusion, reason, evidence, example, or side comment.	**11 What Do the Numbers Say?** Use Statistical Sense Read numbers with the right context.
04 What's Assumed? Spot Hidden Assumptions Find the unstated idea the argument needs.	**12 Cause or Coincidence?** Separate Correlation and Causation Explain why a cause claim is not proven yet.
05 Does That Matter? Test Relevance Decide whether a fact actually matters for the claim.	**13 What Else Could Explain It?** Consider Alternative Explanations Pick another explanation that also fits the facts.
06 How Good Is the Evidence? Evaluate Evidence Quality Pick the strongest evidence from the details given.	**14 What Bias Is Showing?** Recognize Cognitive Biases Name the thinking bias shown in a choice.
07 Can We Trust the Source? Check Source Reliability Judge a source using expertise, motives, method, and openness.	**15 What Are the Tradeoffs?** Weigh Tradeoffs and Consequences Find the clearest cost, benefit, risk, or second effect.
08 Does the Logic Follow? Detect Logical Gaps Find the step that does not follow.	**16 How Should Belief Change?** Update Beliefs Responsibly Change confidence by the right amount.

Skill 01

Clarify the Claim

What's the Claim?

Find the exact claim being made. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What exactly is the speaker asking us to accept?
Why it matters	Every argument is easier to judge once you know exactly what someone is asking you to accept. Without this skill, people waste time attacking side details, stories, or evidence while the real point quietly escapes inspection.
Conceptual core	This skill trains students to locate the target of judgment before judging it. A prompt may include background, measurements, motives, vivid details, and a speaker's conclusion. The claim is the statement that would need support after the background has been cleared away. Students should learn that claims can be descriptive, predictive, causal, evaluative, or practical recommendations, and that each type requires different later tests.
Student method	Look for the sentence that would still need support if all the background details were removed. Separate the recommendation from the reason, the measured result, the audience, and any claim that goes beyond what the speaker actually said.
Analogy	Think of a claim as the destination on a map. Evidence is the road, scenery is background, and exaggerations are roads to somewhere else.
Assessment focus	A good answer names the exact point being supported and rejects answers that are merely supporting facts, side details, or overclaims.

Teaching Sequence

1. Find the speaker and mark the sentence that sounds like the point of the argument.

2. Separate the claim from the evidence that is offered for it.

3. Check whether an answer overstates the claim by adding always, only, proven, everyone, or everywhere.

4. Restate the claim in plain language before choosing an answer.

Common Confusions To Watch For

1. Students often pick the most concrete fact because it feels important, even when it is only evidence.

2. Students may pick an extreme version of the claim because it sounds more decisive than the actual conclusion.

3. Students sometimes confuse the issue being discussed with the position someone takes on that issue.

Teacher Prompts

1. Who is trying to persuade whom?

2. Which sentence would the speaker need to defend if challenged?

3. Which choices are evidence, background, or exaggeration rather than the claim?

Worked Example

Scenario	A city tests later library hours and visits rise from 400 to 460 per week. A council member says, because of that test, the city should keep the later hours.
Teacher think-aloud	The visit count is evidence. The issue is library hours. The council member's claim is the recommendation to keep later hours. A choice saying the test proves later hours always work would go beyond the claim.
Student takeaway	The main claim is the point being defended, not the measurement used to defend it.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A student writes: 'Our library closes at 5 p.m. During a four-week trial of closing at 7 p.m., weekly visits rose from 400 to 460. The council should keep the later closing time.'

What To Do

1. Copy the main claim: the proposal the writer wants the council to accept.

2. Copy the supporting evidence and label the remaining sentence as background.

3. Write one sentence explaining why the visit count is not itself the main claim.

Check before reading the answer. Have you separated the proposed action from the fact used to support it? Do not add 'always' or claim that the trial proves the policy works everywhere.

Model Answer

Claim: the council should keep the later closing time. Evidence: weekly visits rose from 400 to 460 during the trial. Background: the library normally closes at 5 p.m. The count supports the proposal; it is not the proposed action.

Why it is adequate. The answer names the roles of all three sentences without strengthening what the writer said.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

clarify_claim-001 | Level 1 | Answer A

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Riley asking people to accept?

A. The city council should extend evening bus service until midnight. correct	**B.** The city council has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice	**D.** The new buses were repainted blue. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, transportation, d1

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-002 | Level 1 | Answer C

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Maya asking people to accept?

A. The school board has proven the idea will work everywhere without needing more evidence. choice	**B.** Ninth-grade students are the only ones affected, so no other concern matters. choice
C. The school board should require phone lockers during class. correct	**D.** The lockers are installed near the gym. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The school board should require phone lockers during class.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-003 | Level 1 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Sam asking people to accept?

A. The hospital should send medication reminder texts before evening doses. correct	**B.** A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. choice
C. The text messages use a green pill icon. choice	**D.** The hospital has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, health, d1

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-004 | Level 1 | Answer C

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Avery asking people to accept?

A. The test calendar starts on a Monday. choice	**B.** The company has proven the idea will work everywhere without needing more evidence. choice
C. The company should test a Monday-through-Thursday workweek. correct	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, workplace, d1

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-005 | Level 1 | Answer B

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Taylor asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence. choice	**B.** The grocery chain should add larger unit-price labels on shelf tags. correct
C. Weekly grocery shoppers are the only ones affected, so no other concern matters. choice	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, retail, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-006 | Level 1 | Answer C

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Morgan asking people to accept?

A. The library has proven the idea will work everywhere without needing more evidence. choice	**B.** Families checking out children's books are the only ones affected, so no other concern matters. choice
C. The library should waive late fines for children's books. correct	**D.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The library should waive late fines for children's books.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, public services, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-007 | Level 1 | Answer C

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Casey asking people to accept?

A. The login button changed from green to blue. choice	**B.** The platform has proven the idea will work everywhere without needing more evidence. choice
C. The platform should require two-factor login for site administrators. correct	**D.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, technology, d1

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-008 | Level 1 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Jordan asking people to accept?

A. The neighborhood association should add brighter LED streetlights on Maple Street. correct	**B.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. choice
C. Residents on Maple Street are the only ones affected, so no other concern matters. choice	**D.** The neighborhood association has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, public safety, d1

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-009 | Level 1 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Riley asking people to accept?

A. The university has proven the idea will work everywhere without needing more evidence. choice	**B.** The tutoring room has new chairs. choice
C. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice	**D.** The university should expand peer tutoring in statistics. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-010 | Level 1 | Answer A

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Maya asking people to accept?

A. The restaurant group should show calorie labels on printed lunch menus. correct	**B.** The lunch menus are printed on thicker paper. choice
C. The restaurant group has proven the idea will work everywhere without needing more evidence. choice	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, nutrition, d1

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-011 | Level 1 | Answer A

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Sam asking people to accept?

A. The bank should send overdraft warning texts before fees post. correct	**B.** The warning texts arrive from a short code. choice
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice	**D.** Checking-account customers are the only ones affected, so no other concern matters. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, finance, d1

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-012 | Level 1 | Answer D

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Avery asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice
C. The digital passes include a small trail map. choice	**D.** The park service should use timed-entry passes for weekend trail visits. correct

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, environment, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

---

clarify_claim-013 | Level 1 | Answer C

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Taylor asking people to accept?

A. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice	**B.** Local families are the only ones affected, so no other concern matters. choice
C. The museum should offer free admission on Fridays. correct	**D.** The museum has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The museum should offer free admission on Fridays.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, culture, d1

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-014 | Level 1 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Morgan asking people to accept?

A. The concussion checklist is printed on yellow paper. choice	**B.** The sports league should add mandatory sideline concussion checks. correct
C. The sports league has proven the idea will work everywhere without needing more evidence. choice	**D.** Youth soccer players are the only ones affected, so no other concern matters. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, sports, d1

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

---

clarify_claim-015 | Level 1 | Answer B

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Casey asking people to accept?

A. The receipt email subject line changed. choice	**B.** The nonprofit should send donation receipts within one day. correct
C. First-time donors are the only ones affected, so no other concern matters. choice	**D.** The nonprofit has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-016 | Level 1 | Answer D

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Jordan asking people to accept?

A. The training room has a ceiling-mounted projector. choice	**B.** Warehouse staff are the only ones affected, so no other concern matters. choice
C. The warehouse has proven the idea will work everywhere without needing more evidence. choice	**D.** The warehouse should offer monthly lifting-safety and ergonomic training. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-017 | Level 1 | Answer B

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Riley asking people to accept?

A. The lobby compost bins have foot pedals. choice	**B.** The city sanitation office should place compost bins in apartment lobbies. correct
C. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice	**D.** Apartment residents are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-018 | Level 1 | Answer D

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Maya asking people to accept?

A. New app users are the only ones affected, so no other concern matters. choice	**B.** The privacy screen uses a shield icon. choice
C. The app maker has proven the idea will work everywhere without needing more evidence. choice	**D.** The app maker should make new user profiles private by default. correct

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The app maker should make new user profiles private by default.. The other options are either support, background, or an overclaim.

clarify_claim-019 | Level 1 | Answer D

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Sam asking people to accept?

A. The appointment cards are white. choice	**B.** The clinic has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice	**D.** The clinic should reserve same-day appointment slots. correct

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

---

clarify_claim-020 | Level 1 | Answer B

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Avery asking people to accept?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice	**B.** The airline should board passengers by seat zone. correct
C. The gate signs are backlit. choice	**D.** Domestic flight passengers are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The airline should board passengers by seat zone.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, travel, d1

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-021 | Level 1 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Taylor asking people to accept?

A. The landlord has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. choice
C. The repair portal uses a house logo. choice	**D.** The landlord should launch an online apartment repair portal. correct

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, housing, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-022 | Level 1 | Answer A

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Morgan asking people to accept?

A. The cafeteria should move fruit bowls to the front of the cafeteria line. correct	**B.** Middle-school students are the only ones affected, so no other concern matters. choice
C. The fruit bowls are ceramic. choice	**D.** The cafeteria has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-023 | Level 1 | Answer B

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Casey asking people to accept?

A. The coaching slides use blue headers. choice	**B.** The call center should give support agents weekly script coaching. correct
C. Support agents are the only ones affected, so no other concern matters. choice	**D.** The call center has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-024 | Level 1 | Answer C

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Jordan asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence. choice	**B.** Local homeowners are the only ones affected, so no other concern matters. choice
C. The water utility should send automatic household water-leak alerts. correct	**D.** The water-leak alert screen includes a blue droplet icon. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-025 | Level 1 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Riley asking people to accept?

A. The police department has proven the idea will work everywhere without needing more evidence. choice	**B.** Patrol officers are the only ones affected, so no other concern matters. choice
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**D.** The police department should send body-camera activation reminders before patrol shifts. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-026 | Level 1 | Answer A

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Maya asking people to accept?

A. The election office should offer online mail-ballot tracking. correct	**B.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice
C. The election office has proven the idea will work everywhere without needing more evidence. choice	**D.** The ballot-tracking page uses county colors. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-027 | Level 1 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Sam asking people to accept?

A. The review prompts use a bell icon. choice	**B.** The tutoring app should send spaced-review prompts for language vocabulary. correct
C. Language learners are the only ones affected, so no other concern matters. choice	**D.** The tutoring app has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary.. The other options are either support, background, or an overclaim.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-028 | Level 1 | Answer C

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Avery asking people to accept?

A. The gym has proven the idea will work everywhere without needing more evidence. choice	**B.** The orientation mats are black. choice
C. The gym should offer a beginner gym orientation. correct	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The gym should offer a beginner gym

orientation.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, fitness, d1

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

---

clarify_claim-029 | Level 1 | Answer B

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Taylor asking people to accept?

A. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. choice	**B.** The insurer should send weekly safe-driving feedback. correct
C. Auto-insurance policyholders are the only ones affected, so no other concern matters. choice	**D.** The insurer has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, insurance, d1

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-030 | Level 1 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Morgan asking people to accept?

A. The newsroom has proven the idea will work everywhere without needing more evidence. choice	**B.** Newsletter readers are the only ones affected, so no other concern matters. choice
C. The newsroom should place corrections at the top of articles. correct	**D.** The correction box has a gray border. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the

top of articles.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-031 | Level 1 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Casey asking people to accept?

A. The farmers market should require clearer price signs at vendor stalls. correct	**B.** The farmers market has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice	**D.** Weekend farmers market shoppers are the only ones affected, so no other concern matters. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-032 | Level 1 | Answer D

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Jordan asking people to accept?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice	**B.** The hotel has proven the idea will work everywhere without needing more evidence. choice
C. Overnight hotel guests are the only ones affected, so no other concern matters. choice	**D.** The hotel should send quiet-hours text reminders to hotel guests. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, hospitality, d1

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

clarify_claim-033 | Level 2 | Answer B

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Maya asking people to accept?

A. The new buses were repainted blue. choice	**B.** The city council should extend evening bus service until midnight. correct
C. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice	**D.** Late-shift workers are the only ones affected, so no other concern matters. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, transportation, d2

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-034 | Level 2 | Answer A

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Sam asking people to accept?

A. The school board should require phone lockers during class. correct	**B.** Ninth-grade students are the only ones affected, so no other concern matters. choice
C. The school board has proven the idea will work everywhere without needing more evidence. choice	**D.** The lockers are installed near the gym. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The school board should require phone lockers during class.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d2

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-035 | Level 2 | Answer D

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Avery asking people to accept?

A. The text messages use a green pill icon. choice	**B.** Patients over 60 are the only ones affected, so no other concern matters. choice
C. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. choice	**D.** The hospital should send medication reminder texts before evening doses. correct

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-036 | Level 2 | Answer C

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Taylor asking people to accept?

A. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice	**B.** The company has proven the idea will work everywhere without needing more evidence. choice
C. The company should test a Monday-through-Thursday workweek. correct	**D.** Software engineers are the only ones affected, so no other concern matters. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, workplace, d2

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-037 | Level 2 | Answer B

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Morgan asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence. choice	**B.** The grocery chain should add larger unit-price labels on shelf tags. correct
C. The shelf labels use bold black numbers. choice	**D.** Weekly grocery shoppers are the only ones affected, so no other concern matters. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, retail, d2

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-038 | Level 2 | Answer A

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Casey asking people to accept?

A. The library should waive late fines for children's books. correct	**B.** The children's-book checkout desk moved six feet. choice
C. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice	**D.** Families checking out children's books are the only ones affected, so no other concern matters. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The library should waive late fines for children's books.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, public services, d2

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-039 | Level 2 | Answer D

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Jordan asking people to accept?

A. The platform has proven the idea will work everywhere without needing more evidence. choice	**B.** Site administrators are the only ones affected, so no other concern matters. choice
C. The login button changed from green to blue. choice	**D.** The platform should require two-factor login for site administrators. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, technology, d2

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-040 | Level 2 | Answer C

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Riley asking people to accept?

A. The new light poles are made of aluminum. choice	**B.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. choice
C. The neighborhood association should add brighter LED streetlights on Maple Street. correct	**D.** Residents on Maple Street are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-041 | Level 2 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Maya asking people to accept?

A. The university has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice
C. The tutoring room has new chairs. choice	**D.** The university should expand peer tutoring in statistics. correct

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d2

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-042 | Level 2 | Answer C

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Sam asking people to accept?

A. The restaurant group has proven the idea will work everywhere without needing more evidence. choice	**B.** The lunch menus are printed on thicker paper. choice
C. The restaurant group should show calorie labels on printed lunch menus. correct	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-043 | Level 2 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Avery asking people to accept?

A. The bank has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice
C. The bank should send overdraft warning texts before fees post. correct	**D.** Checking-account customers are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-044 | Level 2 | Answer D

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Taylor asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence. choice	**B.** Weekend trail hikers are the only ones affected, so no other concern matters. choice
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice	**D.** The park service should use timed-entry passes for weekend trail visits. correct

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-045 | Level 2 | Answer A

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Morgan asking people to accept?

A. The museum should offer free admission on Fridays. correct	**B.** The museum has proven the idea will work everywhere without needing more evidence. choice
C. The Friday tickets are scanned at the east door. choice	**D.** Local families are the only ones affected, so no other concern matters. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The museum should offer free admission on Fridays.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, culture, d2

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-046 | Level 2 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Casey asking people to accept?

A. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. choice	**B.** The sports league should add mandatory sideline concussion checks. correct
C. Youth soccer players are the only ones affected, so no other concern matters. choice	**D.** The concussion checklist is printed on yellow paper. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, sports, d2

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-047 | Level 2 | Answer C

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Jordan asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters. choice	**B.** The receipt email subject line changed. choice
C. The nonprofit should send donation receipts within one day. correct	**D.** The nonprofit has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, nonprofit, d2

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-048 | Level 2 | Answer D

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Riley asking people to accept?

A. Warehouse staff are the only ones affected, so no other concern matters. choice	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice
C. The training room has a ceiling-mounted projector. choice	**D.** The warehouse should offer monthly lifting-safety and ergonomic training. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-049 | Level 2 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Maya asking people to accept?

A. The city sanitation office should place compost bins in apartment lobbies. correct	**B.** Apartment residents are the only ones affected, so no other concern matters. choice
C. The lobby compost bins have foot pedals. choice	**D.** The city sanitation office has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, environment, d2

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-050 | Level 2 | Answer B

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Sam asking people to accept?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice	**B.** The app maker should make new user profiles private by default. correct
C. The privacy screen uses a shield icon. choice	**D.** The app maker has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, technology, d2

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-051 | Level 2 | Answer A

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Avery asking people to accept?

A. The clinic should reserve same-day appointment slots. correct	**B.** The clinic has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice	**D.** Primary-care patients are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, health, d2

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-052 | Level 2 | Answer B

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Taylor asking people to accept?

A. Domestic flight passengers are the only ones affected, so no other concern matters. choice	**B.** The airline should board passengers by seat zone. correct
C. The airline has proven the idea will work everywhere without needing more evidence. choice	**D.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The airline should board passengers by seat zone.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-053 | Level 2 | Answer B

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Morgan asking people to accept?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. choice	**B.** The landlord should launch an online apartment repair portal. correct
C. The repair portal uses a house logo. choice	**D.** Apartment tenants are the only ones affected, so no other concern matters. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

---

clarify_claim-054 | Level 2 | Answer A

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Casey asking people to accept?

A. The cafeteria should move fruit bowls to the front of the cafeteria line. correct	**B.** The fruit bowls are ceramic. choice
C. Middle-school students are the only ones affected, so no other concern matters. choice	**D.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

---

clarify_claim-055 | Level 2 | Answer D

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Jordan asking people to accept?

A. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice	**B.** Support agents are the only ones affected, so no other concern matters. choice
C. The coaching slides use blue headers. choice	**D.** The call center should give support agents weekly script coaching. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-056 | Level 2 | Answer C

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Riley asking people to accept?

A. Local homeowners are the only ones affected, so no other concern matters. choice	**B.** The water-leak alert screen includes a blue droplet icon. choice
C. The water utility should send automatic household water-leak alerts. correct	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, utilities, d2

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-057 | Level 2 | Answer B

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Maya asking people to accept?

A. The reminder tone is two beeps. choice	**B.** The police department should send body-camera activation reminders before patrol shifts. correct
C. Patrol officers are the only ones affected, so no other concern matters. choice	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

---

clarify_claim-058 | Level 2 | Answer A

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Sam asking people to accept?

A. The election office should offer online mail-ballot tracking. correct	**B.** The ballot-tracking page uses county colors. choice
C. Mail voters are the only ones affected, so no other concern matters. choice	**D.** The election office has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-059 | Level 2 | Answer C

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Avery asking people to accept?

A. The review prompts use a bell icon. choice	**B.** The tutoring app has proven the idea will work everywhere without needing more evidence. choice
C. The tutoring app should send spaced-review prompts for language vocabulary. correct	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary.. The other options are either support, background, or an overclaim.

clarify_claim-060 | Level 2 | Answer A

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Taylor asking people to accept?

A. The gym should offer a beginner gym orientation. correct	**B.** New gym members are the only ones affected, so no other concern matters. choice
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice	**D.** The gym has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-061 | Level 2 | Answer D

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Morgan asking people to accept?

A. Auto-insurance policyholders are the only ones affected, so no other concern matters. choice	**B.** The insurer has proven the idea will work everywhere without needing more evidence. choice
C. The feedback dashboard uses star ratings. choice	**D.** The insurer should send weekly safe-driving feedback. correct

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

---

clarify_claim-062 | Level 2 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Casey asking people to accept?

A. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice	**B.** The newsroom has proven the idea will work everywhere without needing more evidence. choice
C. The newsroom should place corrections at the top of articles. correct	**D.** Newsletter readers are the only ones affected, so no other concern matters. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

---

clarify_claim-063 | Level 2 | Answer B

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Jordan asking people to accept?

A. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice	**B.** The farmers market should require clearer price signs at vendor stalls. correct
C. Weekend farmers market shoppers are the only ones affected, so no other concern matters. choice	**D.** The stall price signs are laminated. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

---

clarify_claim-064 | Level 2 | Answer D

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Riley asking people to accept?

A. The quiet-hours text reminder uses a small moon icon. choice	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice
C. The hotel has proven the idea will work everywhere without needing more evidence. choice	**D.** The hotel should send quiet-hours text reminders to hotel guests. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, hospitality, d2

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

clarify_claim-065 | Level 3 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Sam asking people to accept?

A. The new buses were repainted blue. choice	**B.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice
C. The city council should extend evening bus service until midnight. correct	**D.** The city council has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-066 | Level 3 | Answer D

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Avery asking people to accept?

A. The lockers are installed near the gym. choice	**B.** The school board has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. choice	**D.** The school board should require phone lockers during class. correct

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The school board should require phone lockers during class.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-067 | Level 3 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Taylor asking people to accept?

A. The hospital should send medication reminder texts before evening doses. correct	**B.** Patients over 60 are the only ones affected, so no other concern matters. choice
C. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. choice	**D.** The text messages use a green pill icon. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, health, d3

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-068 | Level 3 | Answer B

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Morgan asking people to accept?

A. The test calendar starts on a Monday. choice	**B.** The company should test a Monday-through-Thursday workweek. correct
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice	**D.** The company has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, workplace, d3

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-069 | Level 3 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Casey asking people to accept?

A. The shelf labels use bold black numbers. choice	**B.** Weekly grocery shoppers are the only ones affected, so no other concern matters. choice
C. The grocery chain should add larger unit-price labels on shelf tags. correct	**D.** The grocery chain has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-070 | Level 3 | Answer D

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Jordan asking people to accept?

A. The library has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice
C. The children's-book checkout desk moved six feet. choice	**D.** The library should waive late fines for children's books. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The library should waive late fines for children's books.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-071 | Level 3 | Answer A

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Riley asking people to accept?

A. The platform should require two-factor login for site administrators. correct	**B.** Site administrators are the only ones affected, so no other concern matters. choice
C. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. choice	**D.** The login button changed from green to blue. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-072 | Level 3 | Answer B

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Maya asking people to accept?

A. The neighborhood association has proven the idea will work everywhere without needing more evidence. choice	**B.** The neighborhood association should add brighter LED streetlights on Maple Street. correct
C. Residents on Maple Street are the only ones affected, so no other concern matters. choice	**D.** The new light poles are made of aluminum. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-073 | Level 3 | Answer A

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Sam asking people to accept?

A. The university should expand peer tutoring in statistics. correct	**B.** First-year statistics students are the only ones affected, so no other concern matters. choice
C. The tutoring room has new chairs. choice	**D.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d3

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-074 | Level 3 | Answer B

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Avery asking people to accept?

A. The restaurant group has proven the idea will work everywhere without needing more evidence. choice	**B.** The restaurant group should show calorie labels on printed lunch menus. correct
C. The lunch menus are printed on thicker paper. choice	**D.** Lunch customers are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, nutrition, d3

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-075 | Level 3 | Answer D

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Taylor asking people to accept?

A. The warning texts arrive from a short code. choice	**B.** The bank has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice	**D.** The bank should send overdraft warning texts before fees post. correct

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-078 | Level 3 | Answer C

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Jordan asking people to accept?

A. The concussion checklist is printed on yellow paper. choice	**B.** Youth soccer players are the only ones affected, so no other concern matters. choice
C. The sports league should add mandatory sideline concussion checks. correct	**D.** The sports league has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks.. The other options are either support, background, or an overclaim.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-079 | Level 3 | Answer D

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Riley asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters. choice	**B.** The nonprofit has proven the idea will work everywhere without needing more evidence. choice
C. The receipt email subject line changed. choice	**D.** The nonprofit should send donation receipts within one day. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, nonprofit, d3

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-080 | Level 3 | Answer B

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Maya asking people to accept?

A. The warehouse has proven the idea will work everywhere without needing more evidence. choice	**B.** The warehouse should offer monthly lifting-safety and ergonomic training. correct
C. The training room has a ceiling-mounted projector. choice	**D.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-081 | Level 3 | Answer D

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Sam asking people to accept?

A. Apartment residents are the only ones affected, so no other concern matters. choice	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice
C. The lobby compost bins have foot pedals. choice	**D.** The city sanitation office should place compost bins in apartment lobbies. correct

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, environment, d3

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-082 | Level 3 | Answer B

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Avery asking people to accept?

A. The app maker has proven the idea will work everywhere without needing more evidence. choice	**B.** The app maker should make new user profiles private by default. correct
C. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice	**D.** The privacy screen uses a shield icon. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-083 | Level 3 | Answer B

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Taylor asking people to accept?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice	**B.** The clinic should reserve same-day appointment slots. correct
C. Primary-care patients are the only ones affected, so no other concern matters. choice	**D.** The appointment cards are white. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-085 | Level 3 | Answer C

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Casey asking people to accept?

A. The landlord has proven the idea will work everywhere without needing more evidence. choice	**B.** Apartment tenants are the only ones affected, so no other concern matters. choice
C. The landlord should launch an online apartment repair portal. correct	**D.** The repair portal uses a house logo. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, housing, d3

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-086 | Level 3 | Answer D

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Jordan asking people to accept?

A. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. choice	**B.** Middle-school students are the only ones affected, so no other concern matters. choice
C. The fruit bowls are ceramic. choice	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line.. The other options are either support, background, or an overclaim.

clarify_claim-087 | Level 3 | Answer A

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Riley asking people to accept?

A. The call center should give support agents weekly script coaching. correct	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice
C. The call center has proven the idea will work everywhere without needing more evidence. choice	**D.** Support agents are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching.. The other options are either support, background, or an overclaim.

clarify_claim-088 | Level 3 | Answer B

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Maya asking people to accept?

A. Local homeowners are the only ones affected, so no other concern matters. choice	**B.** The water utility should send automatic household water-leak alerts. correct
C. The water utility has proven the idea will work everywhere without needing more evidence. choice	**D.** The water-leak alert screen includes a blue droplet icon. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-089 | Level 3 | Answer A

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Sam asking people to accept?

A. The police department should send body-camera activation reminders before patrol shifts. correct	**B.** Patrol officers are the only ones affected, so no other concern matters. choice
C. The police department has proven the idea will work everywhere without needing more evidence. choice	**D.** The reminder tone is two beeps. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-090 | Level 3 | Answer C

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Avery asking people to accept?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice	**B.** The election office has proven the idea will work everywhere without needing more evidence. choice
C. The election office should offer online mail-ballot tracking. correct	**D.** Mail voters are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-091 | Level 3 | Answer A

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Taylor asking people to accept?

A. The tutoring app should send spaced-review prompts for language vocabulary. correct	**B.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice
C. The review prompts use a bell icon. choice	**D.** Language learners are the only ones affected, so no other concern matters. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, learning, d3

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-092 | Level 3 | Answer C

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Morgan asking people to accept?

A. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice	**B.** New gym members are the only ones affected, so no other concern matters. choice
C. The gym should offer a beginner gym orientation. correct	**D.** The orientation mats are black. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The gym should offer a beginner gym

orientation.. The other options are either support, background, or an overclaim.

clarify_claim-094 | Level 3 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Jordan asking people to accept?

A. The newsroom has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice
C. The newsroom should place corrections at the top of articles. correct	**D.** Newsletter readers are the only ones affected, so no other concern matters. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles.. The other options are either support, background, or an overclaim.

clarify_claim-095 | Level 3 | Answer D

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Riley asking people to accept?

A. The stall price signs are laminated. choice	**B.** The farmers market has proven the idea will work everywhere without needing more evidence. choice
C. Weekend farmers market shoppers are the only ones affected, so no other concern matters. choice	**D.** The farmers market should require clearer price signs at vendor stalls. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls.. The other options are either support, background, or an overclaim.

clarify_claim-096 | Level 3 | Answer C

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Maya asking people to accept?

A. The hotel has proven the idea will work everywhere without needing more evidence. choice	**B.** Overnight hotel guests are the only ones affected, so no other concern matters. choice
C. The hotel should send quiet-hours text reminders to hotel guests. correct	**D.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

clarify_claim-097 | Level 4 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Avery asking people to accept?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice	**B.** The new buses were repainted blue. choice
C. The city council should extend evening bus service until midnight. correct	**D.** Late-shift workers are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight.. The other options are either support, background, or an overclaim.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-098 | Level 4 | Answer A

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Taylor asking people to accept?

A. The school board should require phone lockers during class. correct	**B.** The lockers are installed near the gym. choice
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. choice	**D.** The school board has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The school board should require phone lockers during class.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-099 | Level 4 | Answer C

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Morgan asking people to accept?

A. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. choice	**B.** Patients over 60 are the only ones affected, so no other concern matters. choice
C. The hospital should send medication reminder texts before evening doses. correct	**D.** The hospital has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses.. The other options are either support, background, or an overclaim.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-100 | Level 4 | Answer A

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Casey asking people to accept?

A. The company should test a Monday-through-Thursday workweek. correct	**B.** Software engineers are the only ones affected, so no other concern matters. choice
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice	**D.** The company has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-101 | Level 4 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Jordan asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence. choice	**B.** Weekly grocery shoppers are the only ones affected, so no other concern matters. choice
C. The grocery chain should add larger unit-price labels on shelf tags. correct	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-102 | Level 4 | Answer A

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Riley asking people to accept?

A. The library should waive late fines for children's books. correct	**B.** The children's-book checkout desk moved six feet. choice
C. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice	**D.** Families checking out children's books are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The library should waive late fines for children's books.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, public services, d4

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-103 | Level 4 | Answer C

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Maya asking people to accept?

A. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. choice	**B.** Site administrators are the only ones affected, so no other concern matters. choice
C. The platform should require two-factor login for site administrators. correct	**D.** The login button changed from green to blue. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-104 | Level 4 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Sam asking people to accept?

A. The neighborhood association should add brighter LED streetlights on Maple Street. correct	**B.** Residents on Maple Street are the only ones affected, so no other concern matters. choice
C. The neighborhood association has proven the idea will work everywhere without needing more evidence. choice	**D.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-105 | Level 4 | Answer B

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Avery asking people to accept?

A. The tutoring room has new chairs. choice	**B.** The university should expand peer tutoring in statistics. correct
C. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice	**D.** The university has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-106 | Level 4 | Answer A

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Taylor asking people to accept?

A. The restaurant group should show calorie labels on printed lunch menus. correct	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice
C. The restaurant group has proven the idea will work everywhere without needing more evidence. choice	**D.** Lunch customers are the only ones affected, so no other concern matters. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-107 | Level 4 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Morgan asking people to accept?

A. The bank has proven the idea will work everywhere without needing more evidence. choice	**B.** The warning texts arrive from a short code. choice
C. The bank should send overdraft warning texts before fees post. correct	**D.** Checking-account customers are the only ones affected, so no other concern matters. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-108 | Level 4 | Answer D

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Casey asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence. choice	**B.** Weekend trail hikers are the only ones affected, so no other concern matters. choice
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice	**D.** The park service should use timed-entry passes for weekend trail visits. correct

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-110 | Level 4 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Riley asking people to accept?

A. The sports league has proven the idea will work everywhere without needing more evidence. choice	**B.** The sports league should add mandatory sideline concussion checks. correct
C. The concussion checklist is printed on yellow paper. choice	**D.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-111 | Level 4 | Answer C

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Maya asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters. choice	**B.** The receipt email subject line changed. choice
C. The nonprofit should send donation receipts within one day. correct	**D.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, nonprofit, d4

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-112 | Level 4 | Answer D

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Sam asking people to accept?

A. Warehouse staff are the only ones affected, so no other concern matters. choice	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice
C. The training room has a ceiling-mounted projector. choice	**D.** The warehouse should offer monthly lifting-safety and ergonomic training. correct

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, workplace safety, d4

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-113 | Level 4 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Avery asking people to accept?

A. The city sanitation office should place compost bins in apartment lobbies. correct	**B.** The lobby compost bins have foot pedals. choice
C. The city sanitation office has proven the idea will work everywhere without needing more evidence. choice	**D.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-114 | Level 4 | Answer B

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Taylor asking people to accept?

A. New app users are the only ones affected, so no other concern matters. choice	**B.** The app maker should make new user profiles private by default. correct
C. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice	**D.** The app maker has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, technology, d4

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-115 | Level 4 | Answer C

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Morgan asking people to accept?

A. The appointment cards are white. choice	**B.** A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice
C. The clinic should reserve same-day appointment slots. correct	**D.** The clinic has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-116 | Level 4 | Answer D

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Casey asking people to accept?

A. The airline has proven the idea will work everywhere without needing more evidence. choice	**B.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice
C. Domestic flight passengers are the only ones affected, so no other concern matters. choice	**D.** The airline should board passengers by seat zone. correct

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The airline should board passengers by seat zone.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, travel, d4

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-117 | Level 4 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Jordan asking people to accept?

A. The repair portal uses a house logo. choice	**B.** The landlord has proven the idea will work everywhere without needing more evidence. choice
C. Apartment tenants are the only ones affected, so no other concern matters. choice	**D.** The landlord should launch an online apartment repair portal. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-118 | Level 4 | Answer B

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Riley asking people to accept?

A. The fruit bowls are ceramic. choice	**B.** The cafeteria should move fruit bowls to the front of the cafeteria line. correct
C. The cafeteria has proven the idea will work everywhere without needing more evidence. choice	**D.** Middle-school students are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-119 | Level 4 | Answer D

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Maya asking people to accept?

A. Support agents are the only ones affected, so no other concern matters. choice	**B.** The call center has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice	**D.** The call center should give support agents weekly script coaching. correct

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-120 | Level 4 | Answer B

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Sam asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence. choice	**B.** The water utility should send automatic household water-leak alerts. correct
C. Local homeowners are the only ones affected, so no other concern matters. choice	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, utilities, d4

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-121 | Level 4 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Avery asking people to accept?

A. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**B.** The police department has proven the idea will work everywhere without needing more evidence. choice
C. The reminder tone is two beeps. choice	**D.** The police department should send body-camera activation reminders before patrol shifts. correct

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-122 | Level 4 | Answer B

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Taylor asking people to accept?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice	**B.** The election office should offer online mail-ballot tracking. correct
C. Mail voters are the only ones affected, so no other concern matters. choice	**D.** The ballot-tracking page uses county colors. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-123 | Level 4 | Answer D

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Morgan asking people to accept?

A. Language learners are the only ones affected, so no other concern matters. choice	**B.** The review prompts use a bell icon. choice
C. The tutoring app has proven the idea will work everywhere without needing more evidence. choice	**D.** The tutoring app should send spaced-review prompts for language vocabulary. correct

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary.. The other options are either support, background, or an overclaim.

clarify_claim-124 | Level 4 | Answer B

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Casey asking people to accept?

A. The gym has proven the idea will work everywhere without needing more evidence. choice	**B.** The gym should offer a beginner gym orientation. correct
C. The orientation mats are black. choice	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

---

clarify_claim-125 | Level 4 | Answer B

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Jordan asking people to accept?

A. The insurer has proven the idea will work everywhere without needing more evidence. choice	**B.** The insurer should send weekly safe-driving feedback. correct
C. The feedback dashboard uses star ratings. choice	**D.** Auto-insurance policyholders are the only ones affected, so no other concern matters. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

---

clarify_claim-126 | Level 4 | Answer A

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Riley asking people to accept?

A. The newsroom should place corrections at the top of articles. correct	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice
C. Newsletter readers are the only ones affected, so no other concern matters. choice	**D.** The newsroom has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, media, d4

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

---

clarify_claim-127 | Level 4 | Answer C

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Maya asking people to accept?

A. Weekend farmers market shoppers are the only ones affected, so no other concern matters. choice	**B.** The farmers market has proven the idea will work everywhere without needing more evidence. choice
C. The farmers market should require clearer price signs at vendor stalls. correct	**D.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, local commerce, d4

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-128 | Level 4 | Answer D

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Sam asking people to accept?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice	**B.** Overnight hotel guests are the only ones affected, so no other concern matters. choice
C. The hotel has proven the idea will work everywhere without needing more evidence. choice	**D.** The hotel should send quiet-hours text reminders to hotel guests. correct

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, hospitality, d4

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

clarify_claim-129 | Level 5 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Taylor asking people to accept?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice	**B.** The new buses were repainted blue. choice
C. The city council should extend evening bus service until midnight. correct	**D.** Late-shift workers are the only ones affected, so no other concern matters. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight.. The other options are either support, background, or an overclaim.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

---

clarify_claim-130 | Level 5 | Answer D

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Morgan asking people to accept?

A. The lockers are installed near the gym. choice	**B.** A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. choice
C. The school board has proven the idea will work everywhere without needing more evidence. choice	**D.** The school board should require phone lockers during class. correct

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The school board should require phone lockers during class.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-131 | Level 5 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Casey asking people to accept?

A. The hospital should send medication reminder texts before evening doses. correct	**B.** The text messages use a green pill icon. choice
C. Patients over 60 are the only ones affected, so no other concern matters. choice	**D.** The hospital has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-132 | Level 5 | Answer B

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Jordan asking people to accept?

A. The test calendar starts on a Monday. choice	**B.** The company should test a Monday-through-Thursday workweek. correct
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice	**D.** Software engineers are the only ones affected, so no other concern matters. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, workplace, d5

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-133 | Level 5 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Riley asking people to accept?

A. The shelf labels use bold black numbers. choice	**B.** The grocery chain has proven the idea will work everywhere without needing more evidence. choice
C. The grocery chain should add larger unit-price labels on shelf tags. correct	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-134 | Level 5 | Answer D

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Maya asking people to accept?

A. The children's-book checkout desk moved six feet. choice	**B.** Families checking out children's books are the only ones affected, so no other concern matters. choice
C. The library has proven the idea will work everywhere without needing more evidence. choice	**D.** The library should waive late fines for children's books. correct

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The library should waive late fines for children's books.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-135 | Level 5 | Answer A

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Sam asking people to accept?

A. The platform should require two-factor login for site administrators. correct	**B.** The login button changed from green to blue. choice
C. The platform has proven the idea will work everywhere without needing more evidence. choice	**D.** Site administrators are the only ones affected, so no other concern matters. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, technology, d5

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-136 | Level 5 | Answer B

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Avery asking people to accept?

A. The new light poles are made of aluminum. choice	**B.** The neighborhood association should add brighter LED streetlights on Maple Street. correct
C. Residents on Maple Street are the only ones affected, so no other concern matters. choice	**D.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-137 | Level 5 | Answer A

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Taylor asking people to accept?

A. The university should expand peer tutoring in statistics. correct	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice
C. The tutoring room has new chairs. choice	**D.** The university has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, education, d5

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-138 | Level 5 | Answer B

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Morgan asking people to accept?

A. Lunch customers are the only ones affected, so no other concern matters. choice	**B.** The restaurant group should show calorie labels on printed lunch menus. correct
C. The lunch menus are printed on thicker paper. choice	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-139 | Level 5 | Answer B

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Casey asking people to accept?

A. Checking-account customers are the only ones affected, so no other concern matters. choice	**B.** The bank should send overdraft warning texts before fees post. correct
C. The warning texts arrive from a short code. choice	**D.** A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

clarify_claim-140 | Level 5 | Answer A

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Jordan asking people to accept?

A. The park service should use timed-entry passes for weekend trail visits. correct	**B.** The digital passes include a small trail map. choice
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice	**D.** Weekend trail hikers are the only ones affected, so no other concern matters. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-141 | Level 5 | Answer D

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Riley asking people to accept?

A. The Friday tickets are scanned at the east door. choice	**B.** The museum has proven the idea will work everywhere without needing more evidence. choice
C. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice	**D.** The museum should offer free admission on Fridays. correct

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The museum should offer free admission on Fridays.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-142 | Level 5 | Answer C

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Maya asking people to accept?

A. The concussion checklist is printed on yellow paper. choice	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. choice
C. The sports league should add mandatory sideline concussion checks. correct	**D.** Youth soccer players are the only ones affected, so no other concern matters. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-143 | Level 5 | Answer B

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Sam asking people to accept?

A. The nonprofit has proven the idea will work everywhere without needing more evidence. choice	**B.** The nonprofit should send donation receipts within one day. correct
C. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. choice	**D.** The receipt email subject line changed. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-144 | Level 5 | Answer A

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Avery asking people to accept?

A. The warehouse should offer monthly lifting-safety and ergonomic training. correct	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice
C. The warehouse has proven the idea will work everywhere without needing more evidence. choice	**D.** The training room has a ceiling-mounted projector. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-145 | Level 5 | Answer D

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Taylor asking people to accept?

A. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice	**B.** Apartment residents are the only ones affected, so no other concern matters. choice
C. The lobby compost bins have foot pedals. choice	**D.** The city sanitation office should place compost bins in apartment lobbies. correct

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-146 | Level 5 | Answer C

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Morgan asking people to accept?

A. The privacy screen uses a shield icon. choice	**B.** The app maker has proven the idea will work everywhere without needing more evidence. choice
C. The app maker should make new user profiles private by default. correct	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The app maker should make new user profiles private by default.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

---

clarify_claim-147 | Level 5 | Answer D

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Casey asking people to accept?

A. The clinic has proven the idea will work everywhere without needing more evidence. choice	**B.** The appointment cards are white. choice
C. Primary-care patients are the only ones affected, so no other concern matters. choice	**D.** The clinic should reserve same-day appointment slots. correct

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

---

clarify_claim-148 | Level 5 | Answer C

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Jordan asking people to accept?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice	**B.** Domestic flight passengers are the only ones affected, so no other concern matters. choice
C. The airline should board passengers by seat zone. correct	**D.** The airline has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The airline should board passengers by seat zone.. The other options are either support, background, or an overclaim.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-149 | Level 5 | Answer C

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Riley asking people to accept?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. choice	**B.** The landlord has proven the idea will work everywhere without needing more evidence. choice
C. The landlord should launch an online apartment repair portal. correct	**D.** Apartment tenants are the only ones affected, so no other concern matters. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-150 | Level 5 | Answer D

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Maya asking people to accept?

A. The fruit bowls are ceramic. choice	**B.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. choice
C. The cafeteria has proven the idea will work everywhere without needing more evidence. choice	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line. correct

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line.. The other options are either support, background, or an overclaim.

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

clarify_claim-151 | Level 5 | Answer A

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Sam asking people to accept?

A. The call center should give support agents weekly script coaching. correct	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice
C. Support agents are the only ones affected, so no other concern matters. choice	**D.** The call center has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching.. The other options are either support, background, or an overclaim.

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-152 | Level 5 | Answer B

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Avery asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence. choice	**B.** The water utility should send automatic household water-leak alerts. correct
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice	**D.** Local homeowners are the only ones affected, so no other concern matters. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic

household water-leak alerts.. The other options are either support, background, or an overclaim.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

clarify_claim-153 | Level 5 | Answer C

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Taylor asking people to accept?

A. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**B.** Patrol officers are the only ones affected, so no other concern matters. choice
C. The police department should send body-camera activation reminders before patrol shifts. correct	**D.** The reminder tone is two beeps. choice

Core explanation. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts.. The other options are either support, background, or an overclaim.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-154 | Level 5 | Answer D

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Morgan asking people to accept?

A. Mail voters are the only ones affected, so no other concern matters. choice	**B.** The ballot-tracking page uses county colors. choice
C. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice	**D.** The election office should offer online mail-ballot tracking. correct

Core explanation. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking.. The other options are either support, background, or an overclaim.

clarify_claim-155 | Level 5 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Casey asking people to accept?

A. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice	**B.** The tutoring app should send spaced-review prompts for language vocabulary. correct
C. Language learners are the only ones affected, so no other concern matters. choice	**D.** The review prompts use a bell icon. choice

Core explanation. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, learning, d5

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

---

clarify_claim-156 | Level 5 | Answer D

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Jordan asking people to accept?

A. The orientation mats are black. choice	**B.** New gym members are the only ones affected, so no other concern matters. choice
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice	**D.** The gym should offer a beginner gym orientation. correct

Core explanation. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, fitness, d5

A feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

---

clarify_claim-157 | Level 5 | Answer A

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Riley asking people to accept?

A. The insurer should send weekly safe-driving feedback. correct	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. choice
C. Auto-insurance policyholders are the only ones affected, so no other concern matters. choice	**D.** The insurer has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, insurance, d5

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-158 | Level 5 | Answer B

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Maya asking people to accept?

A. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice	**B.** The newsroom should place corrections at the top of articles. correct
C. Newsletter readers are the only ones affected, so no other concern matters. choice	**D.** The newsroom has proven the idea will work everywhere without needing more evidence. choice

Core explanation. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, media, d5

A feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

clarify_claim-159 | Level 5 | Answer C

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Sam asking people to accept?

A. Weekend farmers market shoppers are the only ones affected, so no other concern matters. choice	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice
C. The farmers market should require clearer price signs at vendor stalls. correct	**D.** The stall price signs are laminated. choice

Core explanation. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, local commerce, d5

A feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

clarify_claim-160 | Level 5 | Answer A

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Avery asking people to accept?

A. The hotel should send quiet-hours text reminders to hotel guests. correct	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice
C. Overnight hotel guests are the only ones affected, so no other concern matters. choice	**D.** The quiet-hours text reminder uses a small moon icon. choice

Core explanation. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

Process commentary. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests.. The other options are either support, background, or an overclaim.

Tags: clarify_claim, claim, hospitality, d5

A feedback (Correct): Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B feedback (Distractor): Not quite. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C feedback (Distractor): Not quite. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D feedback (Distractor): Not quite. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Skill 02

Define Key Terms

What Do the Words Mean?

Find the word or phrase that needs a clearer meaning. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Which word or phrase must be made clearer before the argument can be fairly judged?
Why it matters	Vague words let people agree too quickly and disagree too late. Terms such as fair, safe, enough, harmful, or successful can carry the whole argument while meaning different things to different people.
Conceptual core	Arguments often turn on ordinary words that hide a standard. Words like safe, fair, effective, affordable, harmful, successful, and better invite disagreement unless the speaker says what would count. Defining terms does not settle the whole argument, but it makes the argument testable. The goal is not to demand definitions for every word; it is to find the term that carries the burden of the conclusion.
Student method	Find the word that sets the standard for judgment. If reasonable people could ask, How much? In what way? By whose measure? or Compared with what?, the word probably needs a sharper definition.
Analogy	A vague term is like a blurry ruler. You can measure with it only after the markings are clear.
Assessment focus	A good answer selects the vague or standard-setting phrase and can explain what kind of definition would make the claim testable.

Teaching Sequence

1. Look for judgment words, threshold words, and comparison words.

2. Ask what someone would need to count or observe to apply the term.

3. Distinguish unclear key terms from details that are already specific.

4. Test whether two reasonable readers could interpret the word differently.

Common Confusions To Watch For

1. Students may pick a familiar word simply because it appears often in the prompt.

2. Students may think a term is clear because they have a private meaning for it.

3. Students may define a side detail while leaving the standard that matters untouched.

Teacher Prompts

1. What would count as enough?

2. What would two people disagree about even if they agreed on the facts?

3. Can we measure or apply this word without adding a standard?

Worked Example

Scenario	A school says a phone rule is justified because it creates a healthier classroom.
Teacher think-aloud	The word healthier is doing the work. Does it mean fewer distractions, less anxiety, better grades, more sleep, or better social interaction? Until that term is defined, the rule cannot be judged clearly.
Student takeaway	The key term is the one that hides the standard for success.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A principal says a new phone rule makes lessons 'better'. In the same ten classes, weekly phone interruptions fell from 20 to 12, but average test scores stayed at 70 out of 100. Both figures compare the four weeks before the rule with the four weeks after it.

What To Do

1. Write two possible definitions of 'better': one using interruptions and one using test scores. For each, state the direction of improvement and the comparison period.

2. Apply each definition to the supplied figures and say whether it shows an improvement.

3. Finish with one sentence explaining why the school's purpose should guide its choice of measure before results are inspected.

Check before reading the answer. Could a reader apply your two rules to the figures without guessing? Separate observing a change from claiming the rule caused it.

Model Answer

Definition 1: fewer weekly phone interruptions across these ten classes in the four weeks after the rule than before it. This measure improves from 20 to 12. Definition 2: a higher average test score in the same classes and periods. This measure shows no improvement: 70 in both periods. The school should choose according to whether its purpose is reducing disruption or improving test performance, rather than picking whichever result looks best.

Why it is adequate. Both definitions specify an observable measure, direction, group, and comparison; the answer shows how the conclusion depends on the definition.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

define_terms-001 | Level 1 | Answer A

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Riley says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "safe" correct	**B.** "approve it" choice
C. "aimed at late-shift workers" choice	**D.** "weighing a proposal" choice

Core explanation. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "safe" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, transportation, d1, safe

A feedback (Correct): Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-002 | Level 1 | Answer B

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Maya says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan" choice	**B.** "reasonable" correct
C. "aimed at ninth-grade students" choice	**D.** "weighing a proposal" choice

Core explanation. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d1, reasonable

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-003 | Level 1 | Answer C

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Sam says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal" choice	**B.** "approve it" choice
C. "fair" correct	**D.** "the plan" choice

Core explanation. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "fair" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d1, fair

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-004 | Level 1 | Answer D

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Avery says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "the plan" choice	**B.** "aimed at software engineers" choice
C. "weighing a proposal" choice	**D.** "affordable" correct

Core explanation. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "affordable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace, d1, affordable

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-005 | Level 1 | Answer A

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Taylor says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "significant" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at weekly grocery shoppers" choice

Core explanation. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "significant" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, retail, d1, significant

A feedback (Correct): Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-006 | Level 1 | Answer B

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Morgan says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "experienced" correct
C. "aimed at families checking out children's books" choice	**D.** "the plan" choice

Core explanation. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "experienced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public services, d1, experienced

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-007 | Level 1 | Answer C

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Casey says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at site administrators" choice	**B.** "the plan" choice
C. "soon" correct	**D.** "approve it" choice

Core explanation. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "soon" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d1, soon

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-008 | Level 1 | Answer D

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Jordan says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan" choice	**B.** "approve it" choice
C. "aimed at residents on Maple Street" choice	**D.** "local" correct

Core explanation. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "local" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public safety, d1, local

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-009 | Level 1 | Answer A

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Riley says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "high-quality" correct	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "the plan" choice

Core explanation. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d1, high-quality

A feedback (Correct): Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-010 | Level 1 | Answer B

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Maya says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at lunch customers" choice	**B.** "enough" correct
C. "weighing a proposal" choice	**D.** "the plan" choice

Core explanation. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "enough" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nutrition, d1, enough

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-011 | Level 1 | Answer B

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Sam says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at checking-account customers" choice	**B.** "reliable" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reliable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, finance, d1, reliable

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-012 | Level 1 | Answer A

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Avery says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "harmful" correct	**B.** "aimed at weekend trail hikers" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "harmful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d1, harmful

A feedback (Correct): Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-013 | Level 1 | Answer D

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Taylor says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at local families" choice	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "transparent" correct

Core explanation. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "transparent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, culture, d1, transparent

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-014 | Level 1 | Answer C

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Morgan says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it" choice	**B.** "the plan" choice
C. "successful" correct	**D.** "weighing a proposal" choice

Core explanation. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "successful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, sports, d1, successful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-015 | Level 1 | Answer B

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Casey says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "approve it" choice	**B.** "at-risk" correct
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nonprofit, d1, at-risk

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-016 | Level 1 | Answer A

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Jordan says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "frequent" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at warehouse staff" choice

Core explanation. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "frequent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace safety, d1, frequent

A feedback (Correct): Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-017 | Level 1 | Answer D

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Riley says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "serious" correct

Core explanation. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "serious" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d1, serious

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-018 | Level 1 | Answer C

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Maya says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal" choice	**B.** "aimed at new app users" choice
C. "accessible" correct	**D.** "the plan" choice

Core explanation. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "accessible" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d1, accessible

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-019 | Level 1 | Answer B

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Sam says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal" choice	**B.** "normal" correct
C. "the plan" choice	**D.** "aimed at primary-care patients" choice

Core explanation. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "normal" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d1, normal

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-020 | Level 1 | Answer A

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Avery says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "excessive" correct	**B.** "aimed at domestic flight passengers" choice
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "excessive" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, travel, d1, excessive

A feedback (Correct): Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-021 | Level 1 | Answer A

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Taylor says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "moderate" correct	**B.** "approve it" choice
C. "aimed at apartment tenants" choice	**D.** "the plan" choice

Core explanation. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "moderate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, housing, d1, moderate

A feedback (Correct): Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-022 | Level 1 | Answer B

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Morgan says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at middle-school students" choice	**B.** "qualified" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "qualified" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, food, d1, qualified

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-023 | Level 1 | Answer C

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Casey says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at support agents" choice	**B.** "approve it" choice
C. "substantial" correct	**D.** "the plan" choice

Core explanation. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "substantial" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, customer support, d1, substantial

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-024 | Level 1 | Answer D

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Jordan says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan" choice	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "clean" correct

Core explanation. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "clean" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, utilities, d1, clean

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-025 | Level 1 | Answer A

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Riley says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "secure" correct	**B.** "aimed at patrol officers" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "secure" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, governance, d1, secure

A feedback (Correct): Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-026 | Level 1 | Answer B

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Maya says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it" choice	**B.** "balanced" correct
C. "aimed at mail voters" choice	**D.** "weighing a proposal" choice

Core explanation. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "balanced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, election administration, d1, balanced

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-027 | Level 1 | Answer C

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Sam says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it" choice	**B.** "the plan" choice
C. "urgent" correct	**D.** "aimed at language learners" choice

Core explanation. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "urgent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, learning, d1, urgent

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-028 | Level 1 | Answer D

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Avery says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "weighing a proposal" choice
C. "aimed at new gym members" choice	**D.** "independent" correct

Core explanation. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "independent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, fitness, d1, independent

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-029 | Level 1 | Answer C

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Taylor says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at auto-insurance policyholders" choice	**B.** "weighing a proposal" choice
C. "diverse" correct	**D.** "approve it" choice

Core explanation. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "diverse" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, insurance, d1, diverse

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-030 | Level 1 | Answer D

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Morgan says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it" choice	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "efficient" correct

Core explanation. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "efficient" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, media, d1, efficient

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-031 | Level 1 | Answer D

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Casey says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "aimed at weekend farmers market shoppers" choice
C. "the plan" choice	**D.** "appropriate" correct

Core explanation. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, local commerce, d1, appropriate

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-032 | Level 1 | Answer C

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Jordan says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it" choice	**B.** "aimed at overnight hotel guests" choice
C. "meaningful" correct	**D.** "weighing a proposal" choice

Core explanation. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, hospitality, d1, meaningful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

define_terms-033 | Level 2 | Answer D

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Maya says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at late-shift workers" choice	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "safe" correct

Core explanation. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "safe" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, transportation, d2, safe

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-034 | Level 2 | Answer C

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Sam says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan" choice	**B.** "aimed at ninth-grade students" choice
C. "reasonable" correct	**D.** "weighing a proposal" choice

Core explanation. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d2, reasonable

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-035 | Level 2 | Answer B

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Avery says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "fair" correct
C. "the plan" choice	**D.** "aimed at patients over 60" choice

Core explanation. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "fair" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d2, fair

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-036 | Level 2 | Answer A

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Taylor says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "affordable" correct	**B.** "aimed at software engineers" choice
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace, d2, affordable

A feedback (Correct): Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-037 | Level 2 | Answer D

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Morgan says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "aimed at weekly grocery shoppers" choice
C. "the plan" choice	**D.** "significant" correct

Core explanation. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "significant" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, retail, d2, significant

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-038 | Level 2 | Answer C

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Casey says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "the plan" choice
C. "experienced" correct	**D.** "approve it" choice

Core explanation. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public services, d2, experienced

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-039 | Level 2 | Answer B

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Jordan says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "weighing a proposal" choice	**B.** "soon" correct
C. "approve it" choice	**D.** "aimed at site administrators" choice

Core explanation. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "soon" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d2, soon

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-040 | Level 2 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Riley says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "local" correct	**B.** "aimed at residents on Maple Street" choice
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public safety, d2, local

A feedback (Correct): Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-041 | Level 2 | Answer B

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Maya says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at first-year statistics students" choice	**B.** "high-quality" correct
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d2, high-quality

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-042 | Level 2 | Answer A

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Sam says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "enough" correct	**B.** "aimed at lunch customers" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "enough" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nutrition, d2, enough

A feedback (Correct): Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-043 | Level 2 | Answer A

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Avery says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "reliable" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at checking-account customers" choice

Core explanation. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "reliable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, finance, d2, reliable

A feedback (Correct): Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-044 | Level 2 | Answer B

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Taylor says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "weighing a proposal" choice	**B.** "harmful" correct
C. "approve it" choice	**D.** "aimed at weekend trail hikers" choice

Core explanation. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "harmful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d2, harmful

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-045 | Level 2 | Answer C

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Morgan says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "aimed at local families" choice
C. "transparent" correct	**D.** "the plan" choice

Core explanation. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "transparent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, culture, d2, transparent

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-046 | Level 2 | Answer D

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Casey says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "the plan" choice
C. "aimed at youth soccer players" choice	**D.** "successful" correct

Core explanation. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "successful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, sports, d2, successful

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-047 | Level 2 | Answer A

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Jordan says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "at-risk" correct	**B.** "approve it" choice
C. "the plan" choice	**D.** "aimed at first-time donors" choice

Core explanation. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nonprofit, d2, at-risk

A feedback (Correct): Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-048 | Level 2 | Answer B

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Riley says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal" choice	**B.** "frequent" correct
C. "aimed at warehouse staff" choice	**D.** "the plan" choice

Core explanation. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "frequent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace safety, d2, frequent

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-049 | Level 2 | Answer C

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Maya says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it" choice	**B.** "aimed at apartment residents" choice
C. "serious" correct	**D.** "weighing a proposal" choice

Core explanation. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "serious" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d2, serious

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-050 | Level 2 | Answer D

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Sam says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal" choice	**B.** "approve it" choice
C. "aimed at new app users" choice	**D.** "accessible" correct

Core explanation. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "accessible" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d2, accessible

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-051 | Level 2 | Answer C

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Avery says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "the plan" choice	**B.** "approve it" choice
C. "normal" correct	**D.** "weighing a proposal" choice

Core explanation. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "normal" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d2, normal

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-052 | Level 2 | Answer D

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Taylor says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at domestic flight passengers" choice	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "excessive" correct

Core explanation. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "excessive" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, travel, d2, excessive

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-053 | Level 2 | Answer B

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Morgan says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at apartment tenants" choice	**B.** "moderate" correct
C. "approve it" choice	**D.** "the plan" choice

Core explanation. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "moderate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, housing, d2, moderate

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-054 | Level 2 | Answer A

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Casey says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "qualified" correct	**B.** "approve it" choice
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "qualified" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, food, d2, qualified

A feedback (Correct): Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-055 | Level 2 | Answer D

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Jordan says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan" choice	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "substantial" correct

Core explanation. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "substantial" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, customer support, d2, substantial

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-056 | Level 2 | Answer C

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Riley says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at local homeowners" choice	**B.** "weighing a proposal" choice
C. "clean" correct	**D.** "approve it" choice

Core explanation. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "clean" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, utilities, d2, clean

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-057 | Level 2 | Answer B

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Maya says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal" choice	**B.** "secure" correct
C. "aimed at patrol officers" choice	**D.** "the plan" choice

Core explanation. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "secure" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, governance, d2, secure

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-058 | Level 2 | Answer A

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Sam says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "balanced" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at mail voters" choice

Core explanation. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "balanced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, election administration, d2, balanced

A feedback (Correct): Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-059 | Level 2 | Answer D

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Avery says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "urgent" correct

Core explanation. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "urgent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, learning, d2, urgent

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-060 | Level 2 | Answer C

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Taylor says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan" choice	**B.** "aimed at new gym members" choice
C. "independent" correct	**D.** "approve it" choice

Core explanation. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "independent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, fitness, d2, independent

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-061 | Level 2 | Answer D

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Morgan says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it" choice	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "diverse" correct

Core explanation. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "diverse" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, insurance, d2, diverse

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-062 | Level 2 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Casey says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "efficient" correct	**D.** "aimed at newsletter readers" choice

Core explanation. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, media, d2, efficient

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-063 | Level 2 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Jordan says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "appropriate" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at weekend farmers market shoppers" choice

Core explanation. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, local commerce, d2, appropriate

A feedback (Correct): Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-064 | Level 2 | Answer B

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Riley says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal" choice	**B.** "meaningful" correct
C. "approve it" choice	**D.** "aimed at overnight hotel guests" choice

Core explanation. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, hospitality, d2, meaningful

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

define_terms-065 | Level 3 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Sam says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at late-shift workers" choice	**B.** "the plan" choice
C. "safe" correct	**D.** "weighing a proposal" choice

Core explanation. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "safe" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, transportation, d3, safe

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-066 | Level 3 | Answer D

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Avery says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "weighing a proposal" choice	**B.** "aimed at ninth-grade students" choice
C. "the plan" choice	**D.** "reasonable" correct

Core explanation. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d3, reasonable

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-067 | Level 3 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Taylor says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "fair" correct	**B.** "approve it" choice
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "fair" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d3, fair

A feedback (Correct): Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-068 | Level 3 | Answer B

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Morgan says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "affordable" correct
C. "approve it" choice	**D.** "aimed at software engineers" choice

Core explanation. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "affordable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace, d3, affordable

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-069 | Level 3 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Casey says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "the plan" choice
C. "significant" correct	**D.** "approve it" choice

Core explanation. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "significant" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, retail, d3, significant

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-070 | Level 3 | Answer D

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Jordan says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at families checking out children's books" choice	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "experienced" correct

Core explanation. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "experienced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public services, d3, experienced

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-071 | Level 3 | Answer A

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Riley says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "soon" correct	**B.** "approve it" choice
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "soon" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d3, soon

A feedback (Correct): Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-072 | Level 3 | Answer B

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Maya says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan" choice	**B.** "local" correct
C. "aimed at residents on Maple Street" choice	**D.** "approve it" choice

Core explanation. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "local" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public safety, d3, local

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-073 | Level 3 | Answer C

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Sam says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal" choice	**B.** "approve it" choice
C. "high-quality" correct	**D.** "aimed at first-year statistics students" choice

Core explanation. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d3, high-quality

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-074 | Level 3 | Answer D

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Avery says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "aimed at lunch customers" choice	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "enough" correct

Core explanation. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "enough" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nutrition, d3, enough

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-075 | Level 3 | Answer B

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Taylor says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at checking-account customers" choice	**B.** "reliable" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reliable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, finance, d3, reliable

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-076 | Level 3 | Answer A

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Morgan says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "harmful" correct	**B.** "weighing a proposal" choice
C. "aimed at weekend trail hikers" choice	**D.** "the plan" choice

Core explanation. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "harmful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d3, harmful

A feedback (Correct): Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-077 | Level 3 | Answer D

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Casey says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan" choice	**B.** "approve it" choice
C. "aimed at local families" choice	**D.** "transparent" correct

Core explanation. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "transparent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, culture, d3, transparent

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-078 | Level 3 | Answer C

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Jordan says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it" choice	**B.** "aimed at youth soccer players" choice
C. "successful" correct	**D.** "the plan" choice

Core explanation. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "successful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, sports, d3, successful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-079 | Level 3 | Answer B

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Riley says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at first-time donors" choice	**B.** "at-risk" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nonprofit, d3, at-risk

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-080 | Level 3 | Answer A

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Maya says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "frequent" correct	**B.** "the plan" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "frequent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace safety, d3, frequent

A feedback (Correct): Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-081 | Level 3 | Answer D

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Sam says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan" choice	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "serious" correct

Core explanation. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "serious" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d3, serious

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-082 | Level 3 | Answer C

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Avery says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "aimed at new app users" choice
C. "accessible" correct	**D.** "the plan" choice

Core explanation. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "accessible" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d3, accessible

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-083 | Level 3 | Answer B

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Taylor says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "weighing a proposal" choice	**B.** "normal" correct
C. "aimed at primary-care patients" choice	**D.** "the plan" choice

Core explanation. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "normal" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d3, normal

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-084 | Level 3 | Answer A

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Morgan says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "excessive" correct	**B.** "weighing a proposal" choice
C. "aimed at domestic flight passengers" choice	**D.** "the plan" choice

Core explanation. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "excessive" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, travel, d3, excessive

A feedback (Correct): Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-085 | Level 3 | Answer A

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Casey says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "moderate" correct	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "the plan" choice

Core explanation. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "moderate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, housing, d3, moderate

A feedback (Correct): Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-086 | Level 3 | Answer B

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Jordan says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it" choice	**B.** "qualified" correct
C. "weighing a proposal" choice	**D.** "the plan" choice

Core explanation. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "qualified" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, food, d3, qualified

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-087 | Level 3 | Answer C

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Riley says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal" choice	**B.** "aimed at support agents" choice
C. "substantial" correct	**D.** "the plan" choice

Core explanation. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "substantial" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, customer support, d3, substantial

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-088 | Level 3 | Answer D

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Maya says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "aimed at local homeowners" choice	**D.** "clean" correct

Core explanation. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "clean" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, utilities, d3, clean

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-089 | Level 3 | Answer A

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Sam says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "secure" correct	**B.** "weighing a proposal" choice
C. "approve it" choice	**D.** "the plan" choice

Core explanation. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "secure" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, governance, d3, secure

A feedback (Correct): Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-090 | Level 3 | Answer B

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Avery says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "balanced" correct
C. "weighing a proposal" choice	**D.** "aimed at mail voters" choice

Core explanation. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "balanced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, election administration, d3, balanced

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-091 | Level 3 | Answer C

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Taylor says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan" choice	**B.** "approve it" choice
C. "urgent" correct	**D.** "weighing a proposal" choice

Core explanation. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "urgent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, learning, d3, urgent

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-092 | Level 3 | Answer D

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Morgan says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at new gym members" choice	**B.** "the plan" choice
C. "approve it" choice	**D.** "independent" correct

Core explanation. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "independent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, fitness, d3, independent

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-093 | Level 3 | Answer A

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Casey says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "diverse" correct	**B.** "aimed at auto-insurance policyholders" choice
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "diverse" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, insurance, d3, diverse

A feedback (Correct): Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-094 | Level 3 | Answer B

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Jordan says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at newsletter readers" choice	**B.** "efficient" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "efficient" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, media, d3, efficient

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-095 | Level 3 | Answer D

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Riley says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "approve it" choice	**B.** "aimed at weekend farmers market shoppers" choice
C. "weighing a proposal" choice	**D.** "appropriate" correct

Core explanation. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, local commerce, d3, appropriate

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-096 | Level 3 | Answer C

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Maya says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it" choice	**B.** "aimed at overnight hotel guests" choice
C. "meaningful" correct	**D.** "the plan" choice

Core explanation. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, hospitality, d3, meaningful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

define_terms-097 | Level 4 | Answer D

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Avery says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "aimed at late-shift workers" choice
C. "the plan" choice	**D.** "safe" correct

Core explanation. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "safe" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, transportation, d4, safe

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-098 | Level 4 | Answer C

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Taylor says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "approve it" choice	**B.** "aimed at ninth-grade students" choice
C. "reasonable" correct	**D.** "weighing a proposal" choice

Core explanation. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d4, reasonable

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-099 | Level 4 | Answer B

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Morgan says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at patients over 60" choice	**B.** "fair" correct
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "fair" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d4, fair

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-100 | Level 4 | Answer A

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Casey says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "affordable" correct	**B.** "aimed at software engineers" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace, d4, affordable

A feedback (Correct): Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-101 | Level 4 | Answer D

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Jordan says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan" choice	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "significant" correct

Core explanation. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "significant" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, retail, d4, significant

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-102 | Level 4 | Answer C

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Riley says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "experienced" correct	**D.** "aimed at families checking out children's books" choice

Core explanation. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public services, d4, experienced

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-103 | Level 4 | Answer B

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Maya says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it" choice	**B.** "soon" correct
C. "weighing a proposal" choice	**D.** "aimed at site administrators" choice

Core explanation. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "soon" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d4, soon

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-104 | Level 4 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Sam says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "local" correct	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "aimed at residents on Maple Street" choice

Core explanation. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public safety, d4, local

A feedback (Correct): Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-105 | Level 4 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Avery says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "weighing a proposal" choice	**B.** "approve it" choice
C. "the plan" choice	**D.** "high-quality" correct

Core explanation. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d4, high-quality

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-106 | Level 4 | Answer C

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Taylor says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan" choice	**B.** "approve it" choice
C. "enough" correct	**D.** "weighing a proposal" choice

Core explanation. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "enough" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nutrition, d4, enough

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Correct): Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-107 | Level 4 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Morgan says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "the plan" choice
C. "reliable" correct	**D.** "approve it" choice

Core explanation. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reliable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, finance, d4, reliable

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-108 | Level 4 | Answer D

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Casey says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "approve it" choice
C. "aimed at weekend trail hikers" choice	**D.** "harmful" correct

Core explanation. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "harmful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d4, harmful

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-109 | Level 4 | Answer A

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Jordan says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "transparent" correct	**B.** "aimed at local families" choice
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "transparent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, culture, d4, transparent

A feedback (Correct): Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-110 | Level 4 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Riley says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "approve it" choice	**B.** "successful" correct
C. "aimed at youth soccer players" choice	**D.** "the plan" choice

Core explanation. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "successful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, sports, d4, successful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-111 | Level 4 | Answer C

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Maya says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal" choice	**B.** "aimed at first-time donors" choice
C. "at-risk" correct	**D.** "approve it" choice

Core explanation. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nonprofit, d4, at-risk

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-112 | Level 4 | Answer D

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Sam says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan" choice	**B.** "aimed at warehouse staff" choice
C. "approve it" choice	**D.** "frequent" correct

Core explanation. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "frequent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace safety, d4, frequent

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-113 | Level 4 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Avery says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "serious" correct	**B.** "aimed at apartment residents" choice
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "serious" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d4, serious

A feedback (Correct): Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-114 | Level 4 | Answer B

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Taylor says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at new app users" choice	**B.** "accessible" correct
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "accessible" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d4, accessible

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-115 | Level 4 | Answer A

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Morgan says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "normal" correct	**B.** "the plan" choice
C. "aimed at primary-care patients" choice	**D.** "weighing a proposal" choice

Core explanation. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "normal" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d4, normal

A feedback (Correct): Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-116 | Level 4 | Answer B

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Casey says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan" choice	**B.** "excessive" correct
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "excessive" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, travel, d4, excessive

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-117 | Level 4 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Jordan says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it" choice	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "moderate" correct

Core explanation. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "moderate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, housing, d4, moderate

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-118 | Level 4 | Answer C

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Riley says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at middle-school students" choice	**B.** "weighing a proposal" choice
C. "qualified" correct	**D.** "the plan" choice

Core explanation. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "qualified" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, food, d4, qualified

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-119 | Level 4 | Answer B

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Maya says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal" choice	**B.** "substantial" correct
C. "approve it" choice	**D.** "the plan" choice

Core explanation. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "substantial" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, customer support, d4, substantial

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-120 | Level 4 | Answer A

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Sam says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "clean" correct	**B.** "weighing a proposal" choice
C. "aimed at local homeowners" choice	**D.** "the plan" choice

Core explanation. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "clean" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, utilities, d4, clean

A feedback (Correct): Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-121 | Level 4 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Avery says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "secure" correct

Core explanation. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "secure" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, governance, d4, secure

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-122 | Level 4 | Answer C

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Taylor says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "balanced" correct	**D.** "aimed at mail voters" choice

Core explanation. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "balanced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, election administration, d4, balanced

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-123 | Level 4 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Morgan says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at language learners" choice	**B.** "urgent" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "urgent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, learning, d4, urgent

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-124 | Level 4 | Answer A

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Casey says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "independent" correct	**B.** "aimed at new gym members" choice
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "independent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, fitness, d4, independent

A feedback (Correct): Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-125 | Level 4 | Answer D

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Jordan says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "weighing a proposal" choice	**B.** "the plan" choice
C. "aimed at auto-insurance policyholders" choice	**D.** "diverse" correct

Core explanation. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "diverse" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, insurance, d4, diverse

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-126 | Level 4 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Riley says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan" choice	**B.** "weighing a proposal" choice
C. "efficient" correct	**D.** "approve it" choice

Core explanation. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, media, d4, efficient

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-127 | Level 4 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Maya says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "appropriate" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at weekend farmers market shoppers" choice

Core explanation. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, local commerce, d4, appropriate

A feedback (Correct): Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-128 | Level 4 | Answer B

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Sam says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan" choice	**B.** "meaningful" correct
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, hospitality, d4, meaningful

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

define_terms-129 | Level 5 | Answer B

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Taylor says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "approve it" choice	**B.** "safe" correct
C. "weighing a proposal" choice	**D.** "the plan" choice

Core explanation. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "safe" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, transportation, d5, safe

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-130 | Level 5 | Answer C

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Morgan says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "aimed at ninth-grade students" choice
C. "reasonable" correct	**D.** "approve it" choice

Core explanation. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d5, reasonable

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-131 | Level 5 | Answer D

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Casey says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "aimed at patients over 60" choice
C. "approve it" choice	**D.** "fair" correct

Core explanation. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "fair" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d5, fair

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-132 | Level 5 | Answer A

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Jordan says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "affordable" correct	**B.** "approve it" choice
C. "the plan" choice	**D.** "aimed at software engineers" choice

Core explanation. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace, d5, affordable

A feedback (Correct): Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-133 | Level 5 | Answer B

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Riley says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal" choice	**B.** "significant" correct
C. "aimed at weekly grocery shoppers" choice	**D.** "approve it" choice

Core explanation. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "significant" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, retail, d5, significant

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-134 | Level 5 | Answer C

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Maya says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan" choice	**B.** "aimed at families checking out children's books" choice
C. "experienced" correct	**D.** "weighing a proposal" choice

Core explanation. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public services, d5, experienced

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-135 | Level 5 | Answer D

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Sam says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it" choice	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "soon" correct

Core explanation. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "soon" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d5, soon

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-136 | Level 5 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Avery says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "local" correct	**B.** "weighing a proposal" choice
C. "the plan" choice	**D.** "aimed at residents on Maple Street" choice

Core explanation. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, public safety, d5, local

A feedback (Correct): Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-137 | Level 5 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Taylor says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at first-year statistics students" choice	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "high-quality" correct

Core explanation. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, education, d5, high-quality

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Correct): Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-138 | Level 5 | Answer A

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Morgan says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "enough" correct	**B.** "the plan" choice
C. "weighing a proposal" choice	**D.** "aimed at lunch customers" choice

Core explanation. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "enough" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nutrition, d5, enough

A feedback (Correct): Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-139 | Level 5 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Casey says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "approve it" choice	**B.** "the plan" choice
C. "reliable" correct	**D.** "aimed at checking-account customers" choice

Core explanation. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reliable" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, finance, d5, reliable

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-140 | Level 5 | Answer B

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Jordan says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at weekend trail hikers" choice	**B.** "harmful" correct
C. "the plan" choice	**D.** "weighing a proposal" choice

Core explanation. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "harmful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d5, harmful

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Correct): Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-141 | Level 5 | Answer A

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Riley says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "transparent" correct	**B.** "aimed at local families" choice
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "transparent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, culture, d5, transparent

A feedback (Correct): Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-142 | Level 5 | Answer D

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Maya says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at youth soccer players" choice	**B.** "approve it" choice
C. "the plan" choice	**D.** "successful" correct

Core explanation. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "successful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, sports, d5, successful

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-143 | Level 5 | Answer C

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Sam says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at first-time donors" choice	**B.** "weighing a proposal" choice
C. "at-risk" correct	**D.** "approve it" choice

Core explanation. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, nonprofit, d5, at-risk

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Correct): Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-144 | Level 5 | Answer B

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Avery says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "frequent" correct
C. "weighing a proposal" choice	**D.** "aimed at warehouse staff" choice

Core explanation. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "frequent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, workplace safety, d5, frequent

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-145 | Level 5 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Taylor says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "serious" correct	**B.** "aimed at apartment residents" choice
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "serious" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, environment, d5, serious

A feedback (Correct): Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-146 | Level 5 | Answer D

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Morgan says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal" choice	**B.** "aimed at new app users" choice
C. "the plan" choice	**D.** "accessible" correct

Core explanation. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "accessible" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, technology, d5, accessible

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Correct): Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-147 | Level 5 | Answer C

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Casey says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at primary-care patients" choice	**B.** "the plan" choice
C. "normal" correct	**D.** "approve it" choice

Core explanation. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "normal" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, health, d5, normal

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-148 | Level 5 | Answer B

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Jordan says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan" choice	**B.** "excessive" correct
C. "weighing a proposal" choice	**D.** "approve it" choice

Core explanation. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "excessive" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, travel, d5, excessive

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-149 | Level 5 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Riley says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at apartment tenants" choice	**B.** "the plan" choice
C. "approve it" choice	**D.** "moderate" correct

Core explanation. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "moderate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, housing, d5, moderate

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-150 | Level 5 | Answer A

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Maya says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "qualified" correct	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "the plan" choice

Core explanation. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "qualified" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, food, d5, qualified

A feedback (Correct): Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-151 | Level 5 | Answer B

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Sam says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it" choice	**B.** "substantial" correct
C. "the plan" choice	**D.** "aimed at support agents" choice

Core explanation. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "substantial" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, customer support, d5, substantial

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Correct): Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-152 | Level 5 | Answer C

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Avery says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "aimed at local homeowners" choice	**B.** "the plan" choice
C. "clean" correct	**D.** "weighing a proposal" choice

Core explanation. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "clean" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, utilities, d5, clean

A feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-153 | Level 5 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Taylor says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan" choice	**B.** "aimed at patrol officers" choice
C. "approve it" choice	**D.** "secure" correct

Core explanation. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "secure" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, governance, d5, secure

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Correct): Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

define_terms-154 | Level 5 | Answer A

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Morgan says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "balanced" correct	**B.** "approve it" choice
C. "weighing a proposal" choice	**D.** "the plan" choice

Core explanation. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "balanced" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, election administration, d5, balanced

A feedback (Correct): Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-155 | Level 5 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Casey says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal" choice	**B.** "urgent" correct
C. "the plan" choice	**D.** "approve it" choice

Core explanation. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "urgent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, learning, d5, urgent

A feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

B feedback (Correct): Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-156 | Level 5 | Answer C

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Jordan says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it" choice	**B.** "aimed at new gym members" choice
C. "independent" correct	**D.** "the plan" choice

Core explanation. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "independent" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, fitness, d5, independent

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Correct): Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

define_terms-157 | Level 5 | Answer B

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Riley says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan" choice	**B.** "diverse" correct
C. "aimed at auto-insurance policyholders" choice	**D.** "approve it" choice

Core explanation. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "diverse" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, insurance, d5, diverse

A feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B feedback (Correct): Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

define_terms-158 | Level 5 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Maya says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it" choice	**B.** "the plan" choice
C. "efficient" correct	**D.** "aimed at newsletter readers" choice

Core explanation. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, media, d5, efficient

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C feedback (Correct): Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

define_terms-159 | Level 5 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Sam says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "appropriate" correct	**B.** "aimed at weekend farmers market shoppers" choice
C. "approve it" choice	**D.** "weighing a proposal" choice

Core explanation. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, local commerce, d5, appropriate

A feedback (Correct): Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

define_terms-160 | Level 5 | Answer D

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Avery says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it" choice	**B.** "weighing a proposal" choice
C. "aimed at overnight hotel guests" choice	**D.** "meaningful" correct

Core explanation. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

Process commentary. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

Tags: define_terms, vagueness, hospitality, d5, meaningful

A feedback (Distractor): Not quite. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B feedback (Distractor): Not quite. This phrase describes the meeting context. It is not the slippery word people need to define.

C feedback (Distractor): Not quite. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D feedback (Correct): Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Skill 03

Find the Argument

What's the Argument?

Find the conclusion, reason, evidence, example, or side comment. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What role does each sentence play in the argument?
Why it matters	Arguments are built from parts: conclusion, reason, background, example, and side comment. Naming those parts keeps readers from treating every sentence as equally important.
Conceptual core	Finding the argument means mapping the relationship among sentences. Students learn to distinguish conclusion, reason, evidence, example, context, and irrelevant detail. This is a structural skill: the same sentence can be evidence in one argument and conclusion in another. The key is the job it performs in the immediate passage.
Student method	Ask which sentence is being supported, then ask which sentence does the supporting. Conclusion indicators such as therefore help, but the real test is the role the sentence plays.
Analogy	An argument is like a table: the conclusion is the tabletop, and the reasons are the legs. Background facts may be in the room, but they are not holding the table up.
Assessment focus	A good answer identifies the conclusion, reason, or other requested role without being pulled toward the most interesting sentence.

Teaching Sequence

1. Identify the sentence that other sentences are meant to support.

2. Mark evidence or reasons that point toward that conclusion.

3. Treat examples as illustrations unless they are the main point being defended.

4. Ignore signal words if the sentence's actual role points the other way.

Common Confusions To Watch For

1. Students often treat the first fact as the conclusion because it appears first.

2. Students may mistake a topic sentence for an argued conclusion.

3. Students may choose a true background statement even when it is not doing argumentative work.

Teacher Prompts

1. Which sentence answers 'so what should we believe or do?'

2. Which sentence answers 'why should we believe that?'

3. If we removed this sentence, would the argument lose its support, its conclusion, or only some background?

Worked Example

Scenario	A school club says its bake sale raised more money than the car wash, so next month the club should run another bake sale.
Teacher think-aloud	The money comparison supports the recommendation. The conclusion is the action the club should take. The topic is fundraising, but the argument is the move from past result to future plan.
Student takeaway	The conclusion is the supported point; the reason is the support.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A club member writes: 'Our club meets on Tuesdays. Last month's bake sale earned $300 after costs, while the car wash earned $180. Therefore, we should hold another bake sale next month.'

What To Do

1. Label each sentence background, reason, or conclusion.

2. Draw an arrow from the reason to the conclusion, or write 'reason -> conclusion' using the actual sentences.

3. Explain in one sentence why the Tuesday meeting detail is not support for the fundraising recommendation.

Check before reading the answer. Does your arrow show which statement supports which? The most detailed sentence need not be the conclusion.

Model Answer

Tuesday meetings are background. The $300 versus $180 earnings comparison is the reason. Holding another bake sale is the conclusion. Draw the arrow from the earnings comparison to the recommendation. Meeting on Tuesday supplies no comparison of the two fundraising options.

Why it is adequate. The answer maps the argument's structure and explains why a true detail is not necessarily a reason.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

find_argument-001 | Level 1 | Answer A

Prompt. At a meeting about evening bus service for late-shift workers, Riley says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Riley's conclusion?

A. The city council should extend evening bus service until midnight. correct	**B.** The new buses were repainted blue. choice
C. The proposal is meant mainly for late-shift workers. choice	**D.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The city council should extend evening bus service until midnight.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, transportation, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-002 | Level 1 | Answer B

Prompt. At a meeting about classroom phone lockers, Maya says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for ninth-grade students. choice	**B.** The school board should require phone lockers during class. correct
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. choice	**D.** The lockers are installed near the gym. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The school board should require phone lockers during class.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, education, d1

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-003 | Level 1 | Answer C

Prompt. At a meeting about medication reminder texts for older patients, Sam says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Sam's conclusion?

A. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. choice	**B.** The text messages use a green pill icon. choice
C. The hospital should send medication reminder texts before evening doses. correct	**D.** The proposal is meant mainly for patients over 60. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The hospital should send medication reminder texts before evening doses.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, health, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-004 | Level 1 | Answer D

Prompt. At a meeting about a four-day workweek test for software engineers, Avery says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Avery's conclusion?

A. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice	**B.** The test calendar starts on a Monday. choice
C. The proposal is meant mainly for software engineers. choice	**D.** The company should test a Monday-through-Thursday workweek. correct

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The company should test a Monday-through-Thursday workweek.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, workplace, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-005 | Level 1 | Answer A

Prompt. At a meeting about larger grocery unit-price labels, Taylor says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Taylor's conclusion?

A. The grocery chain should add larger unit-price labels on shelf tags. correct	**B.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice
C. The shelf labels use bold black numbers. choice	**D.** The proposal is meant mainly for weekly grocery shoppers. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The grocery chain should add larger unit-price labels on shelf tags.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, retail, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-006 | Level 1 | Answer B

Prompt. At a meeting about late fines on children's books, Morgan says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Morgan's conclusion?

A. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice	**B.** The library should waive late fines for children's books. correct
C. The children's-book checkout desk moved six feet. choice	**D.** The proposal is meant mainly for families checking out children's books. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The library should waive late fines for children's books.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, public services, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-007 | Level 1 | Answer C

Prompt. At a meeting about two-factor login for site administrators, Casey says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for site administrators. choice	**B.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. choice
C. The platform should require two-factor login for site administrators. correct	**D.** The login button changed from green to blue. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The platform should require two-factor login for site administrators.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, technology, d1

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-008 | Level 1 | Answer D

Prompt. At a meeting about brighter streetlights on Maple Street, Jordan says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Jordan's conclusion?

A. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for residents on Maple Street. choice
C. The new light poles are made of aluminum. choice	**D.** The neighborhood association should add brighter LED streetlights on Maple Street. correct

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The neighborhood association should add brighter LED streetlights on Maple Street.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, public safety, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-009 | Level 1 | Answer C

Prompt. At a meeting about peer tutoring for first-year statistics students, Riley says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Riley's conclusion?

A. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for first-year statistics students. choice
C. The university should expand peer tutoring in statistics. correct	**D.** The tutoring room has new chairs. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The university should expand peer tutoring in statistics.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, education, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-010 | Level 1 | Answer D

Prompt. At a meeting about calorie labels on restaurant menus, Maya says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for lunch customers. choice	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice
C. The lunch menus are printed on thicker paper. choice	**D.** The restaurant group should show calorie labels on printed lunch menus. correct

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The restaurant group should show calorie labels on printed lunch menus.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, nutrition, d1

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-011 | Level 1 | Answer D

Prompt. At a meeting about bank overdraft warning texts, Sam says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Sam's conclusion?

A. The warning texts arrive from a short code. choice	**B.** The proposal is meant mainly for checking-account customers. choice
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice	**D.** The bank should send overdraft warning texts before fees post. correct

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The bank should send overdraft warning texts before fees post.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, finance, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-012 | Level 1 | Answer B

Prompt. At a meeting about timed-entry passes for weekend park trails, Avery says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Avery's conclusion?

A. The digital passes include a small trail map. choice	**B.** The park service should use timed-entry passes for weekend trail visits. correct
C. The proposal is meant mainly for weekend trail hikers. choice	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-013 | Level 1 | Answer D

Prompt. At a meeting about free Friday museum admission, Taylor says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Taylor's conclusion?

A. The Friday tickets are scanned at the east door. choice	**B.** The proposal is meant mainly for local families. choice
C. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice	**D.** The museum should offer free admission on Fridays. correct

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The museum should offer free admission on Fridays.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-014 | Level 1 | Answer C

Prompt. At a meeting about youth soccer concussion checks, Morgan says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Morgan's conclusion?

A. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. choice	**B.** The concussion checklist is printed on yellow paper. choice
C. The sports league should add mandatory sideline concussion checks. correct	**D.** The proposal is meant mainly for youth soccer players. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The sports league should add mandatory sideline concussion checks.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, sports, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-015 | Level 1 | Answer D

Prompt. At a meeting about same-day donation receipts, Casey says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Casey's conclusion?

A. The receipt email subject line changed. choice	**B.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. choice
C. The proposal is meant mainly for first-time donors. choice	**D.** The nonprofit should send donation receipts within one day. correct

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The nonprofit should send donation receipts within one day.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-016 | Level 1 | Answer B

Prompt. At a meeting about warehouse ergonomic training, Jordan says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Jordan's conclusion?

A. The training room has a ceiling-mounted projector. choice	**B.** The warehouse should offer monthly lifting-safety and ergonomic training. correct
C. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for warehouse staff. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The warehouse should offer monthly lifting-safety and ergonomic training.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, workplace safety, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-017 | Level 1 | Answer D

Prompt. At a meeting about apartment-lobby compost bins, Riley says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Riley's conclusion?

A. The lobby compost bins have foot pedals. choice	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice
C. The proposal is meant mainly for apartment residents. choice	**D.** The city sanitation office should place compost bins in apartment lobbies. correct

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The city sanitation office should place compost bins in apartment lobbies.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, environment, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-018 | Level 1 | Answer B

Prompt. At a meeting about private-by-default app profiles, Maya says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Maya's conclusion?

A. The privacy screen uses a shield icon. choice	**B.** The app maker should make new user profiles private by default. correct
C. The proposal is meant mainly for new app users. choice	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The app maker should make new user profiles private by default.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, technology, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-019 | Level 1 | Answer B

Prompt. At a meeting about same-day clinic appointment slots, Sam says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for primary-care patients. choice	**B.** The clinic should reserve same-day appointment slots. correct
C. The appointment cards are white. choice	**D.** A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The clinic should reserve same-day appointment slots.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, health, d1

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-020 | Level 1 | Answer A

Prompt. At a meeting about seat-zone airline boarding, Avery says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Avery's conclusion?

A. The airline should board passengers by seat zone. correct	**B.** The gate signs are backlit. choice
C. The proposal is meant mainly for domestic flight passengers. choice	**D.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The airline should board passengers by seat zone.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, travel, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-021 | Level 1 | Answer C

Prompt. At a meeting about an online apartment repair portal, Taylor says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Taylor's conclusion?

A. The repair portal uses a house logo. choice	**B.** The proposal is meant mainly for apartment tenants. choice
C. The landlord should launch an online apartment repair portal. correct	**D.** A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The landlord should launch an online apartment repair portal.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, housing, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-022 | Level 1 | Answer D

Prompt. At a meeting about fruit placement in a school cafeteria line, Morgan says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Morgan's conclusion?

A. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. choice	**B.** The fruit bowls are ceramic. choice
C. The proposal is meant mainly for middle-school students. choice	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line. correct

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The cafeteria should move fruit bowls to the front of the cafeteria line.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, food, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-023 | Level 1 | Answer A

Prompt. At a meeting about weekly call-center script coaching, Casey says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Casey's conclusion?

A. The call center should give support agents weekly script coaching. correct	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice
C. The proposal is meant mainly for support agents. choice	**D.** The coaching slides use blue headers. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The call center should give support agents weekly script coaching.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-024 | Level 1 | Answer B

Prompt. At a meeting about household water-leak alerts, Jordan says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Jordan's conclusion?

A. The water-leak alert screen includes a blue droplet icon. choice	**B.** The water utility should send automatic household water-leak alerts. correct
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for local homeowners. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The water utility should send automatic household water-leak alerts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, utilities, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-025 | Level 1 | Answer A

Prompt. At a meeting about body-camera activation reminders, Riley says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Riley's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts. correct	**B.** The reminder tone is two beeps. choice
C. The proposal is meant mainly for patrol officers. choice	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, governance, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-026 | Level 1 | Answer C

Prompt. At a meeting about county mail-ballot tracking, Maya says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Maya's conclusion?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for mail voters. choice
C. The election office should offer online mail-ballot tracking. correct	**D.** The ballot-tracking page uses county colors. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The election office should offer online mail-ballot tracking.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, election administration, d1

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-027 | Level 1 | Answer A

Prompt. At a meeting about language-learning spaced-review prompts, Sam says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Sam's conclusion?

A. The tutoring app should send spaced-review prompts for language vocabulary. correct	**B.** The proposal is meant mainly for language learners. choice
C. The review prompts use a bell icon. choice	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The tutoring app should send spaced-review prompts for language vocabulary.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, learning, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-028 | Level 1 | Answer C

Prompt. At a meeting about a beginner gym orientation, Avery says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for new gym members. choice	**B.** The orientation mats are black. choice
C. The gym should offer a beginner gym orientation. correct	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The gym should offer a beginner gym orientation.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-029 | Level 1 | Answer A

Prompt. At a meeting about safe-driving feedback for policyholders, Taylor says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Taylor's conclusion?

A. The insurer should send weekly safe-driving feedback. correct	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. choice
C. The proposal is meant mainly for auto-insurance policyholders. choice	**D.** The feedback dashboard uses star ratings. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, insurance, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-030 | Level 1 | Answer C

Prompt. At a meeting about top-of-article correction boxes, Morgan says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for newsletter readers. choice	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice
C. The newsroom should place corrections at the top of articles. correct	**D.** The correction box has a gray border. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The newsroom should place corrections at the top of articles.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, media, d1

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-031 | Level 1 | Answer B

Prompt. At a meeting about clearer farmers market price signs, Casey says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Casey's conclusion?

A. The stall price signs are laminated. choice	**B.** The farmers market should require clearer price signs at vendor stalls. correct
C. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for weekend farmers market shoppers. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The farmers market should require clearer price signs at vendor stalls.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, local commerce, d1

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-032 | Level 1 | Answer A

Prompt. At a meeting about hotel quiet-hours text reminders, Jordan says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Jordan's conclusion?

A. The hotel should send quiet-hours text reminders to hotel guests. correct	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice
C. The quiet-hours text reminder uses a small moon icon. choice	**D.** The proposal is meant mainly for overnight hotel guests. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The hotel should send quiet-hours text reminders to hotel guests.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, hospitality, d1

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

find_argument-033 | Level 2 | Answer B

Prompt. At a meeting about evening bus service for late-shift workers, Maya says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Maya's conclusion?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice	**B.** The city council should extend evening bus service until midnight. correct
C. The proposal is meant mainly for late-shift workers. choice	**D.** The new buses were repainted blue. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The city council should extend evening bus service until midnight.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-036 | Level 2 | Answer C

Prompt. At a meeting about a four-day workweek test for software engineers, Taylor says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Taylor's conclusion?

A. The test calendar starts on a Monday. choice	**B.** The proposal is meant mainly for software engineers. choice
C. The company should test a Monday-through-Thursday workweek. correct	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The company should test a Monday-through-Thursday workweek.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, workplace, d2

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-037 | Level 2 | Answer B

Prompt. At a meeting about larger grocery unit-price labels, Morgan says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Morgan's conclusion?

A. The shelf labels use bold black numbers. choice	**B.** The grocery chain should add larger unit-price labels on shelf tags. correct
C. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for weekly grocery shoppers. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The grocery chain should add larger unit-price labels on shelf tags.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, retail, d2

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-038 | Level 2 | Answer A

Prompt. At a meeting about late fines on children's books, Casey says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Casey's conclusion?

A. The library should waive late fines for children's books. correct	**B.** The children's-book checkout desk moved six feet. choice
C. The proposal is meant mainly for families checking out children's books. choice	**D.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The library should waive late fines for children's books.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, public services, d2

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-039 | Level 2 | Answer D

Prompt. At a meeting about two-factor login for site administrators, Jordan says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Jordan's conclusion?

A. The login button changed from green to blue. choice	**B.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. choice
C. The proposal is meant mainly for site administrators. choice	**D.** The platform should require two-factor login for site administrators. correct

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The platform should require two-factor login for site administrators.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-041 | Level 2 | Answer D

Prompt. At a meeting about peer tutoring for first-year statistics students, Maya says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for first-year statistics students. choice	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice
C. The tutoring room has new chairs. choice	**D.** The university should expand peer tutoring in statistics. correct

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The university should expand peer tutoring in statistics.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, education, d2

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-042 | Level 2 | Answer C

Prompt. At a meeting about calorie labels on restaurant menus, Sam says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for lunch customers. choice	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice
C. The restaurant group should show calorie labels on printed lunch menus. correct	**D.** The lunch menus are printed on thicker paper. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The restaurant group should show calorie labels on printed lunch menus.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-045 | Level 2 | Answer C

Prompt. At a meeting about free Friday museum admission, Morgan says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Morgan's conclusion?

A. The Friday tickets are scanned at the east door. choice	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice
C. The museum should offer free admission on Fridays. correct	**D.** The proposal is meant mainly for local families. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The museum should offer free admission on Fridays.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, culture, d2

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-046 | Level 2 | Answer D

Prompt. At a meeting about youth soccer concussion checks, Casey says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Casey's conclusion?

A. The concussion checklist is printed on yellow paper. choice	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. choice
C. The proposal is meant mainly for youth soccer players. choice	**D.** The sports league should add mandatory sideline concussion checks. correct

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The sports league should add mandatory sideline concussion checks.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, sports, d2

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-047 | Level 2 | Answer A

Prompt. At a meeting about same-day donation receipts, Jordan says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Jordan's conclusion?

A. The nonprofit should send donation receipts within one day. correct	**B.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. choice
C. The proposal is meant mainly for first-time donors. choice	**D.** The receipt email subject line changed. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The nonprofit should send donation receipts within one day.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, nonprofit, d2

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-048 | Level 2 | Answer B

Prompt. At a meeting about warehouse ergonomic training, Riley says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Riley's conclusion?

A. The training room has a ceiling-mounted projector. choice	**B.** The warehouse should offer monthly lifting-safety and ergonomic training. correct
C. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for warehouse staff. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The warehouse should offer monthly lifting-safety and ergonomic training.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-049 | Level 2 | Answer C

Prompt. At a meeting about apartment-lobby compost bins, Maya says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Maya's conclusion?

A. The lobby compost bins have foot pedals. choice	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice
C. The city sanitation office should place compost bins in apartment lobbies. correct	**D.** The proposal is meant mainly for apartment residents. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city sanitation office should place compost bins in apartment lobbies.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, environment, d2

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-050 | Level 2 | Answer D

Prompt. At a meeting about private-by-default app profiles, Sam says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Sam's conclusion?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice	**B.** The privacy screen uses a shield icon. choice
C. The proposal is meant mainly for new app users. choice	**D.** The app maker should make new user profiles private by default. correct

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The app maker should make new user profiles private by default.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-056 | Level 2 | Answer C

Prompt. At a meeting about household water-leak alerts, Riley says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Riley's conclusion?

A. The water-leak alert screen includes a blue droplet icon. choice	**B.** The proposal is meant mainly for local homeowners. choice
C. The water utility should send automatic household water-leak alerts. correct	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The water utility should send automatic household water-leak alerts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, utilities, d2

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-057 | Level 2 | Answer B

Prompt. At a meeting about body-camera activation reminders, Maya says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for patrol officers. choice	**B.** The police department should send body-camera activation reminders before patrol shifts. correct
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**D.** The reminder tone is two beeps. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The police department should send body-camera activation reminders before patrol shifts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, governance, d2

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-058 | Level 2 | Answer A

Prompt. At a meeting about county mail-ballot tracking, Sam says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Sam's conclusion?

A. The election office should offer online mail-ballot tracking. correct	**B.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice
C. The proposal is meant mainly for mail voters. choice	**D.** The ballot-tracking page uses county colors. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The election office should offer online mail-ballot tracking.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, election administration, d2

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-059 | Level 2 | Answer D

Prompt. At a meeting about language-learning spaced-review prompts, Avery says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for language learners. choice	**B.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice
C. The review prompts use a bell icon. choice	**D.** The tutoring app should send spaced-review prompts for language vocabulary. correct

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The tutoring app should send spaced-review prompts for language vocabulary.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-061 | Level 2 | Answer B

Prompt. At a meeting about safe-driving feedback for policyholders, Morgan says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for auto-insurance policyholders. choice	**B.** The insurer should send weekly safe-driving feedback. correct
C. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. choice	**D.** The feedback dashboard uses star ratings. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The insurer should send weekly safe-driving feedback.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, insurance, d2

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-062 | Level 2 | Answer A

Prompt. At a meeting about top-of-article correction boxes, Casey says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Casey's conclusion?

A. The newsroom should place corrections at the top of articles. correct	**B.** The correction box has a gray border. choice
C. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for newsletter readers. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The newsroom should place corrections at the top of articles.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, media, d2

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-063 | Level 2 | Answer C

Prompt. At a meeting about clearer farmers market price signs, Jordan says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for weekend farmers market shoppers. choice	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice
C. The farmers market should require clearer price signs at vendor stalls. correct	**D.** The stall price signs are laminated. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The farmers market should require clearer price signs at vendor stalls.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-064 | Level 2 | Answer D

Prompt. At a meeting about hotel quiet-hours text reminders, Riley says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Riley's conclusion?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice	**B.** The quiet-hours text reminder uses a small moon icon. choice
C. The proposal is meant mainly for overnight hotel guests. choice	**D.** The hotel should send quiet-hours text reminders to hotel guests. correct

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hotel should send quiet-hours text reminders to hotel guests.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, hospitality, d2

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

find_argument-065 | Level 3 | Answer C

Prompt. At a meeting about evening bus service for late-shift workers, Sam says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for late-shift workers. choice	**B.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice
C. The city council should extend evening bus service until midnight. correct	**D.** The new buses were repainted blue. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city council should extend evening bus service until midnight.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-074 | Level 3 | Answer B

Prompt. At a meeting about calorie labels on restaurant menus, Avery says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Avery's conclusion?

A. The lunch menus are printed on thicker paper. choice	**B.** The restaurant group should show calorie labels on printed lunch menus. correct
C. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for lunch customers. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The restaurant group should show calorie labels on printed lunch menus.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, nutrition, d3

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-075 | Level 3 | Answer B

Prompt. At a meeting about bank overdraft warning texts, Taylor says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Taylor's conclusion?

A. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. choice	**B.** The bank should send overdraft warning texts before fees post. correct
C. The proposal is meant mainly for checking-account customers. choice	**D.** The warning texts arrive from a short code. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The bank should send overdraft warning texts before fees post.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-076 | Level 3 | Answer A

Prompt. At a meeting about timed-entry passes for weekend park trails, Morgan says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Morgan's conclusion?

A. The park service should use timed-entry passes for weekend trail visits. correct	**B.** The proposal is meant mainly for weekend trail hikers. choice
C. The digital passes include a small trail map. choice	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The park service should use timed-entry passes for weekend trail visits.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, environment, d3

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-077 | Level 3 | Answer D

Prompt. At a meeting about free Friday museum admission, Casey says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Casey's conclusion?

A. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice	**B.** The Friday tickets are scanned at the east door. choice
C. The proposal is meant mainly for local families. choice	**D.** The museum should offer free admission on Fridays. correct

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The museum should offer free admission on Fridays.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-079 | Level 3 | Answer B

Prompt. At a meeting about same-day donation receipts, Riley says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Riley's conclusion?

A. The receipt email subject line changed. choice	**B.** The nonprofit should send donation receipts within one day. correct
C. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for first-time donors. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The nonprofit should send donation receipts within one day.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, nonprofit, d3

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-080 | Level 3 | Answer A

Prompt. At a meeting about warehouse ergonomic training, Maya says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Maya's conclusion?

A. The warehouse should offer monthly lifting-safety and ergonomic training. correct	**B.** The proposal is meant mainly for warehouse staff. choice
C. The training room has a ceiling-mounted projector. choice	**D.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The warehouse should offer monthly lifting-safety and ergonomic training.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-089 | Level 3 | Answer A

Prompt. At a meeting about body-camera activation reminders, Sam says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Sam's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts. correct	**B.** The reminder tone is two beeps. choice
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for patrol officers. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-094 | Level 3 | Answer B

Prompt. At a meeting about top-of-article correction boxes, Jordan says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for newsletter readers. choice	**B.** The newsroom should place corrections at the top of articles. correct
C. The correction box has a gray border. choice	**D.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The newsroom should place corrections at the top of articles.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, media, d3

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-095 | Level 3 | Answer B

Prompt. At a meeting about clearer farmers market price signs, Riley says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Riley's conclusion?

A. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice	**B.** The farmers market should require clearer price signs at vendor stalls. correct
C. The stall price signs are laminated. choice	**D.** The proposal is meant mainly for weekend farmers market shoppers. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The farmers market should require clearer price signs at vendor stalls.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-108 | Level 4 | Answer B

Prompt. At a meeting about timed-entry passes for weekend park trails, Casey says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Casey's conclusion?

A. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. choice	**B.** The park service should use timed-entry passes for weekend trail visits. correct
C. The proposal is meant mainly for weekend trail hikers. choice	**D.** The digital passes include a small trail map. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-109 | Level 4 | Answer C

Prompt. At a meeting about free Friday museum admission, Jordan says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for local families. choice	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. choice
C. The museum should offer free admission on Fridays. correct	**D.** The Friday tickets are scanned at the east door. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The museum should offer free admission on Fridays.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-113 | Level 4 | Answer C

Prompt. At a meeting about apartment-lobby compost bins, Avery says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Avery's conclusion?

A. The lobby compost bins have foot pedals. choice	**B.** The proposal is meant mainly for apartment residents. choice
C. The city sanitation office should place compost bins in apartment lobbies. correct	**D.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city sanitation office should place compost bins in apartment lobbies.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, environment, d4

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-114 | Level 4 | Answer A

Prompt. At a meeting about private-by-default app profiles, Taylor says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Taylor's conclusion?

A. The app maker should make new user profiles private by default. correct	**B.** The proposal is meant mainly for new app users. choice
C. The privacy screen uses a shield icon. choice	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The app maker should make new user profiles private by default.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, technology, d4

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-115 | Level 4 | Answer C

Prompt. At a meeting about same-day clinic appointment slots, Morgan says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Morgan's conclusion?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for primary-care patients. choice
C. The clinic should reserve same-day appointment slots. correct	**D.** The appointment cards are white. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The clinic should reserve same-day appointment slots.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, health, d4

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-116 | Level 4 | Answer A

Prompt. At a meeting about seat-zone airline boarding, Casey says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Casey's conclusion?

A. The airline should board passengers by seat zone. correct	**B.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice
C. The gate signs are backlit. choice	**D.** The proposal is meant mainly for domestic flight passengers. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The airline should board passengers by seat zone.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-121 | Level 4 | Answer B

Prompt. At a meeting about body-camera activation reminders, Avery says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Avery's conclusion?

A. The reminder tone is two beeps. choice	**B.** The police department should send body-camera activation reminders before patrol shifts. correct
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for patrol officers. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The police department should send body-camera activation reminders before patrol shifts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, governance, d4

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-122 | Level 4 | Answer D

Prompt. At a meeting about county mail-ballot tracking, Taylor says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Taylor's conclusion?

A. The ballot-tracking page uses county colors. choice	**B.** The proposal is meant mainly for mail voters. choice
C. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice	**D.** The election office should offer online mail-ballot tracking. correct

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The election office should offer online mail-ballot tracking.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, election administration, d4

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-123 | Level 4 | Answer B

Prompt. At a meeting about language-learning spaced-review prompts, Morgan says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Morgan's conclusion?

A. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice	**B.** The tutoring app should send spaced-review prompts for language vocabulary. correct
C. The review prompts use a bell icon. choice	**D.** The proposal is meant mainly for language learners. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The tutoring app should send spaced-review prompts for language vocabulary.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-127 | Level 4 | Answer C

Prompt. At a meeting about clearer farmers market price signs, Maya says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Maya's conclusion?

A. The stall price signs are laminated. choice	**B.** The proposal is meant mainly for weekend farmers market shoppers. choice
C. The farmers market should require clearer price signs at vendor stalls. correct	**D.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The farmers market should require clearer price signs at vendor stalls.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, local commerce, d4

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-128 | Level 4 | Answer D

Prompt. At a meeting about hotel quiet-hours text reminders, Sam says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Sam's conclusion?

A. The quiet-hours text reminder uses a small moon icon. choice	**B.** The proposal is meant mainly for overnight hotel guests. choice
C. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice	**D.** The hotel should send quiet-hours text reminders to hotel guests. correct

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hotel should send quiet-hours text reminders to hotel guests.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

find_argument-129 | Level 5 | Answer C

Prompt. At a meeting about evening bus service for late-shift workers, Taylor says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Taylor's conclusion?

A. The proposal is meant mainly for late-shift workers. choice	**B.** The new buses were repainted blue. choice
C. The city council should extend evening bus service until midnight. correct	**D.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city council should extend evening bus service until midnight.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-132 | Level 5 | Answer B

Prompt. At a meeting about a four-day workweek test for software engineers, Jordan says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for software engineers. choice	**B.** The company should test a Monday-through-Thursday workweek. correct
C. The test calendar starts on a Monday. choice	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. choice

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The company should test a Monday-through-Thursday workweek.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, workplace, d5

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-133 | Level 5 | Answer C

Prompt. At a meeting about larger grocery unit-price labels, Riley says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Riley's conclusion?

A. The shelf labels use bold black numbers. choice	**B.** The proposal is meant mainly for weekly grocery shoppers. choice
C. The grocery chain should add larger unit-price labels on shelf tags. correct	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The grocery chain should add larger unit-price labels on shelf tags.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, retail, d5

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-134 | Level 5 | Answer D

Prompt. At a meeting about late fines on children's books, Maya says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Maya's conclusion?

A. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. choice	**B.** The children's-book checkout desk moved six feet. choice
C. The proposal is meant mainly for families checking out children's books. choice	**D.** The library should waive late fines for children's books. correct

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The library should waive late fines for children's books.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-137 | Level 5 | Answer A

Prompt. At a meeting about peer tutoring for first-year statistics students, Taylor says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Taylor's conclusion?

A. The university should expand peer tutoring in statistics. correct	**B.** The tutoring room has new chairs. choice
C. The proposal is meant mainly for first-year statistics students. choice	**D.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The university should expand peer tutoring in statistics.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, education, d5

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-138 | Level 5 | Answer B

Prompt. At a meeting about calorie labels on restaurant menus, Morgan says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Morgan's conclusion?

A. The lunch menus are printed on thicker paper. choice	**B.** The restaurant group should show calorie labels on printed lunch menus. correct
C. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. choice	**D.** The proposal is meant mainly for lunch customers. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The restaurant group should show calorie labels on printed lunch menus.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-146 | Level 5 | Answer C

Prompt. At a meeting about private-by-default app profiles, Morgan says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Morgan's conclusion?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for new app users. choice
C. The app maker should make new user profiles private by default. correct	**D.** The privacy screen uses a shield icon. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The app maker should make new user profiles private by default.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, technology, d5

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-147 | Level 5 | Answer B

Prompt. At a meeting about same-day clinic appointment slots, Casey says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Casey's conclusion?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. choice	**B.** The clinic should reserve same-day appointment slots. correct
C. The appointment cards are white. choice	**D.** The proposal is meant mainly for primary-care patients. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The clinic should reserve same-day appointment slots.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, health, d5

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-148 | Level 5 | Answer D

Prompt. At a meeting about seat-zone airline boarding, Jordan says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for domestic flight passengers. choice	**B.** The gate signs are backlit. choice
C. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. choice	**D.** The airline should board passengers by seat zone. correct

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The airline should board passengers by seat zone.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, travel, d5

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-149 | Level 5 | Answer C

Prompt. At a meeting about an online apartment repair portal, Riley says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Riley's conclusion?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. choice	**B.** The proposal is meant mainly for apartment tenants. choice
C. The landlord should launch an online apartment repair portal. correct	**D.** The repair portal uses a house logo. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The landlord should launch an online apartment repair portal.. Treat evidence and background as helpers, not as the conclusion itself.

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-150 | Level 5 | Answer A

Prompt. At a meeting about fruit placement in a school cafeteria line, Maya says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Maya's conclusion?

A. The cafeteria should move fruit bowls to the front of the cafeteria line. correct	**B.** The fruit bowls are ceramic. choice
C. The proposal is meant mainly for middle-school students. choice	**D.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The cafeteria should move fruit bowls to the front of the cafeteria line.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, food, d5

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-151 | Level 5 | Answer A

Prompt. At a meeting about weekly call-center script coaching, Sam says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Sam's conclusion?

A. The call center should give support agents weekly script coaching. correct	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. choice
C. The coaching slides use blue headers. choice	**D.** The proposal is meant mainly for support agents. choice

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The call center should give support agents weekly script coaching.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, customer support, d5

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-152 | Level 5 | Answer B

Prompt. At a meeting about household water-leak alerts, Avery says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Avery's conclusion?

A. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. choice	**B.** The water utility should send automatic household water-leak alerts. correct
C. The water-leak alert screen includes a blue droplet icon. choice	**D.** The proposal is meant mainly for local homeowners. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The water utility should send automatic household water-leak alerts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, utilities, d5

A feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-153 | Level 5 | Answer A

Prompt. At a meeting about body-camera activation reminders, Taylor says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Taylor's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts. correct	**B.** The reminder tone is two beeps. choice
C. The proposal is meant mainly for patrol officers. choice	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. choice

Core explanation. The conclusion is Taylor's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, governance, d5

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-154 | Level 5 | Answer B

Prompt. At a meeting about county mail-ballot tracking, Morgan says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for mail voters. choice	**B.** The election office should offer online mail-ballot tracking. correct
C. The ballot-tracking page uses county colors. choice	**D.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. choice

Core explanation. The conclusion is Morgan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The election office should offer online mail-ballot tracking.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, election administration, d5

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-155 | Level 5 | Answer C

Prompt. At a meeting about language-learning spaced-review prompts, Casey says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for language learners. choice	**B.** The review prompts use a bell icon. choice
C. The tutoring app should send spaced-review prompts for language vocabulary. correct	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. choice

Core explanation. The conclusion is Casey's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The tutoring app should send spaced-review prompts for language vocabulary.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, learning, d5

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

find_argument-156 | Level 5 | Answer D

Prompt. At a meeting about a beginner gym orientation, Jordan says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Jordan's conclusion?

A. The orientation mats are black. choice	**B.** The proposal is meant mainly for new gym members. choice
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. choice	**D.** The gym should offer a beginner gym orientation. correct

Core explanation. The conclusion is Jordan's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The gym should offer a beginner gym orientation.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, fitness, d5

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-157 | Level 5 | Answer A

Prompt. At a meeting about safe-driving feedback for policyholders, Riley says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Riley's conclusion?

A. The insurer should send weekly safe-driving feedback. correct	**B.** The proposal is meant mainly for auto-insurance policyholders. choice
C. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. choice	**D.** The feedback dashboard uses star ratings. choice

Core explanation. The conclusion is Riley's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, insurance, d5

A feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

find_argument-158 | Level 5 | Answer C

Prompt. At a meeting about top-of-article correction boxes, Maya says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Maya's conclusion?

A. The correction box has a gray border. choice	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. choice
C. The newsroom should place corrections at the top of articles. correct	**D.** The proposal is meant mainly for newsletter readers. choice

Core explanation. The conclusion is Maya's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The newsroom should place corrections at the top of articles.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, media, d5

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

find_argument-159 | Level 5 | Answer D

Prompt. At a meeting about clearer farmers market price signs, Sam says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for weekend farmers market shoppers. choice	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. choice
C. The stall price signs are laminated. choice	**D.** The farmers market should require clearer price signs at vendor stalls. correct

Core explanation. The conclusion is Sam's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The farmers market should require clearer price signs at vendor stalls.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, local commerce, d5

A feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

find_argument-160 | Level 5 | Answer C

Prompt. At a meeting about hotel quiet-hours text reminders, Avery says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Avery's conclusion?

A. The quiet-hours text reminder uses a small moon icon. choice	**B.** The proposal is meant mainly for overnight hotel guests. choice
C. The hotel should send quiet-hours text reminders to hotel guests. correct	**D.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. choice

Core explanation. The conclusion is Avery's point. The test result is a reason offered to support it.

Process commentary. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The hotel should send quiet-hours text reminders to hotel guests.. Treat evidence and background as helpers, not as the conclusion itself.

Tags: find_argument, argument-map, hospitality, d5

A feedback (Distractor): Not quite. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B feedback (Distractor): Not quite. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C feedback (Correct): Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D feedback (Distractor): Not quite. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Skill 04

Spot Hidden Assumptions

What's Assumed?

Find the unstated idea the argument needs. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What unstated idea must be true for the reason to support the conclusion?
Why it matters	Many arguments fail not because a stated sentence is false, but because an unstated bridge is missing. Assumptions are the silent hinges that let a reason swing toward a conclusion.
Conceptual core	An assumption is not merely something unstated; it is an unstated bridge the argument needs. Students should learn to avoid both extremes: choosing an assumption so broad it would make almost any argument work, or choosing a detail that is true but not necessary for this argument. The best assumption usually connects the specific evidence to the specific conclusion.
Student method	Put the reason and conclusion side by side. Then ask what must also be true for the reason to count as support. The best assumption is usually narrower than a huge universal claim.
Analogy	A hidden assumption is a bridge over a gap. If the bridge is weak, even true facts may not get you to the conclusion.
Assessment focus	A good answer supplies a necessary bridge and avoids choices that are mere background, evidence, or overconfident guarantees.

Teaching Sequence

1. Put the stated reason and conclusion next to each other.

2. Ask what must be true for that reason to count in favor of that conclusion.

3. Prefer a narrow bridge over a sweeping guarantee.

4. Use the denial test: if this assumption were false, would the argument weaken?

Common Confusions To Watch For

1. Students may choose a statement that would be nice to know but is not required.

2. Students may choose a much stronger claim than the argument needs.

3. Students may confuse evidence with the assumption that lets the evidence matter.

Teacher Prompts

1. What is the missing bridge between these two sentences?

2. Would the conclusion still be supported if this choice were false?

3. Is this answer just helpful, or is it needed?

Worked Example

Scenario	A store's weekend trial of a new checkout line reduced waiting times, so the store should use that checkout setup every day.
Teacher think-aloud	The argument assumes weekend customers and weekday customers are similar enough, or that the checkout setup would still reduce waits under normal daily conditions.
Student takeaway	Assumptions connect the evidence to the conclusion without adding more than the argument needs.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A store tests a checkout arrangement on Saturday and Sunday. Average waits fall from six minutes to four. The manager concludes, 'This arrangement will also reduce waits on weekdays.' No weekday test has been done.

What To Do

1. Copy the observed reason and the prediction separately.

2. Complete: 'The manager assumes that weekday conditions are similar enough in ___ for the weekend result to carry over.' Name a relevant feature such as customer volume or staffing.

3. Describe one possible weekday difference that would weaken that bridge. You are proposing a possibility, not claiming it happened.

Check before reading the answer. Does your assumption connect this weekend result to weekdays, rather than merely say that faster checkout is desirable?

Model Answer

Reason: weekend waits fell from six to four minutes. Prediction: weekday waits will fall too. The manager assumes weekday customer volume and staffing are similar enough for the arrangement to help. If weekdays have much less staff available, the arrangement might not work as it did in the trial.

Why it is adequate. It identifies the needed transfer from one setting to another and tests that assumption with a relevant possible difference.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

hidden_assumptions-001 | Level 1 | Answer A

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Riley argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Riley's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The new buses were repainted blue, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The city council can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, transportation, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-002 | Level 1 | Answer B

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Maya says, "The plan caused that result." Which hidden assumption does Maya's argument need?

A. The lockers are installed near the gym, which describes the setting but does not show what caused the result. choice	**B.** No other major change during the test period better explains the result than the plan does. correct
C. The school board announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, education, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-003 | Level 1 | Answer C

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Sam says, "That means the plan helped patients over 60." Which hidden assumption does Sam's argument need?

A. Patients over 60 noticed the plan during the test period. choice	**B.** The text messages use a green pill icon, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, health, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-004 | Level 1 | Answer D

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. Avery says, "If the plan can reduce staff resignations, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The company should focus on the side detail before asking whether the result matters. choice	**B.** The test calendar starts on a Monday, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The plan is new enough to get public attention. choice	**D.** Reducing staff resignations would matter enough to count in this decision, not just sound nice. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, workplace, d1

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-005 | Level 1 | Answer A

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The short-term result will not disappear once the test period ends or the rollout begins. correct	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The shelf labels use bold black numbers, which may stay true even if the measured result does not last. choice	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, retail, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-006 | Level 1 | Answer B

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The library can explain the plan clearly to people outside the test group before asking for approval. choice	**B.** The people in the test are enough like the wider group for the result to matter outside the test. correct
C. The children's-book checkout desk moved six feet, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, public services, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-007 | Level 1 | Answer C

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The login button changed from green to blue, which describes the setting but does not show what caused the result. choice	**B.** The platform announced the plan before the measured result changed, so the timing should be listed in the report. choice
C. Nothing else important changed during the same test period in a way that better explains the result. correct	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, technology, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-008 | Level 1 | Answer D

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Jordan says, "That means the plan helped residents on Maple Street." Which hidden assumption does Jordan's argument need?

A. Residents on Maple Street noticed the plan during the test period. choice	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. The new light poles are made of aluminum, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** The result being measured is the right kind of evidence for whether the plan helped the group. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, public safety, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-009 | Level 1 | Answer A

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. Riley says, "If the plan can increase course pass rates, then it should be adopted." Which hidden assumption does Riley's argument need?

A. Increasing course pass rates is important enough to help justify the plan, not just decorate it. correct	**B.** The tutoring room has new chairs, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The plan is new enough to get public attention. choice	**D.** The university should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, education, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-010 | Level 1 | Answer B

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The lunch menus are printed on thicker paper, which may stay true even if the measured result does not last. choice	**B.** The result from the short test will last long enough to matter after the rollout begins. correct
C. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, nutrition, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-011 | Level 1 | Answer D

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The bank can explain the plan clearly to people outside the test group before asking for approval. choice
C. The warning texts arrive from a short code, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, finance, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-012 | Level 1 | Answer C

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The park service announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The result is important enough to discuss before making a final decision. choice
C. The result is not better explained by another change that happened during the same test period. correct	**D.** The digital passes include a small trail map, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, environment, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-013 | Level 1 | Answer B

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Taylor says, "That means the plan helped local families." Which hidden assumption does Taylor's argument need?

A. The Friday tickets are scanned at the east door, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** Improvement in the tracked result would count as a real sign of help for the target group. correct
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Local families noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, culture, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-014 | Level 1 | Answer A

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. Morgan says, "If the plan can reduce repeat head injuries, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. A real change in repeat head injuries would be valuable enough to matter for this decision, not just be noticed. correct	**B.** The concussion checklist is printed on yellow paper, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The sports league should focus on the side detail before asking whether the result matters. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, sports, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-015 | Level 1 | Answer D

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The receipt email subject line changed, which may stay true even if the measured result does not last. choice	**D.** The test result is not just a temporary bump that fades when the test is over. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, nonprofit, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-016 | Level 1 | Answer C

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The training room has a ceiling-mounted projector, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct	**D.** The warehouse can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, workplace safety, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-017 | Level 1 | Answer B

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The city sanitation office announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** Other changes during the test were not strong enough to explain the result better than the plan. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The lobby compost bins have foot pedals, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, environment, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-018 | Level 1 | Answer A

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Maya says, "That means the plan helped new app users." Which hidden assumption does Maya's argument need?

A. The measurement is close enough to the goal to show whether the group was actually helped. correct	**B.** The privacy screen uses a shield icon, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** New app users noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, technology, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-019 | Level 1 | Answer D

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. Sam says, "If the plan can reduce patient no-show rates, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The clinic should focus on the side detail before asking whether the result matters. choice	**B.** The appointment cards are white, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The plan is new enough to get public attention. choice	**D.** The goal of reducing patient no-show rates is important enough to help decide what to do. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, health, d1

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-020 | Level 1 | Answer C

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The gate signs are backlit, which may stay true even if the measured result does not last. choice	**B.** The short test is easy to summarize in one meeting. choice
C. The improvement seen during the test will continue if the plan becomes permanent. correct	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, travel, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-021 | Level 1 | Answer C

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The landlord can explain the plan clearly to people outside the test group before asking for approval. choice	**B.** The repair portal uses a house logo, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, housing, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-022 | Level 1 | Answer D

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The result is important enough to discuss before making a final decision. choice	**B.** The cafeteria announced the plan before the measured result changed, so the timing should be listed in the report. choice
C. The fruit bowls are ceramic, which describes the setting but does not show what caused the result. choice	**D.** The plan is the best explanation of the result, not some other change during the same test period. correct

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, food, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-023 | Level 1 | Answer A

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Casey says, "That means the plan helped support agents." Which hidden assumption does Casey's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved. correct	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. Support agents noticed the plan during the test period. choice	**D.** The coaching slides use blue headers, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, customer support, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-024 | Level 1 | Answer B

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. Jordan says, "If the plan can reduce average household water use, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The water-leak alert screen includes a blue droplet icon, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** Average household water use matters enough that improving it could be a serious reason for the plan. correct
C. The plan is new enough to get public attention. choice	**D.** The water utility should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, utilities, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-025 | Level 1 | Answer C

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The reminder tone is two beeps, which may stay true even if the measured result does not last. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The four-week result is stable enough to be useful for a longer-term decision. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, governance, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-026 | Level 1 | Answer D

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The election office can explain the plan clearly to people outside the test group before asking for approval. choice
C. The ballot-tracking page uses county colors, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, election administration, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-027 | Level 1 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The review prompts use a bell icon, which describes the setting but does not show what caused the result. choice	**B.** No other major change during the test period better explains the result than the plan does. correct
C. The tutoring app announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, learning, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-028 | Level 1 | Answer D

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Avery says, "That means the plan helped new gym members." Which hidden assumption does Avery's argument need?

A. New gym members noticed the plan during the test period. choice	**B.** The orientation mats are black, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, fitness, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-029 | Level 1 | Answer A

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. Taylor says, "If the plan can reduce reported minor crashes, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. Reducing reported minor crashes would matter enough to count in this decision, not just sound nice. correct	**B.** The feedback dashboard uses star ratings, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The insurer should focus on the side detail before asking whether the result matters. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, insurance, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-030 | Level 1 | Answer B

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The short-term result will not disappear once the test period ends or the rollout begins. correct
C. The correction box has a gray border, which may stay true even if the measured result does not last. choice	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, media, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-031 | Level 1 | Answer C

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The stall price signs are laminated, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The people in the test are enough like the wider group for the result to matter outside the test. correct	**D.** The farmers market can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, local commerce, d1

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-032 | Level 1 | Answer A

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result. correct	**B.** The result is important enough to discuss before making a final decision. choice
C. The quiet-hours text reminder uses a small moon icon, which describes the setting but does not show what caused the result. choice	**D.** The hotel announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, hospitality, d1

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

hidden_assumptions-033 | Level 2 | Answer B

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Maya says, "The plan caused that result." Which hidden assumption does Maya's argument need?

A. The new buses were repainted blue, which describes the setting but does not show what caused the result. choice	**B.** Nothing else important changed during the same test period in a way that better explains the result. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The city council announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, transportation, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-034 | Level 2 | Answer A

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Sam says, "That means the plan helped ninth-grade students." Which hidden assumption does Sam's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group. correct	**B.** Ninth-grade students noticed the plan during the test period. choice
C. The lockers are installed near the gym, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, education, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-035 | Level 2 | Answer D

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. Avery says, "If the plan can reduce missed-dose reports, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The text messages use a green pill icon, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** The hospital should focus on the side detail before asking whether the result matters. choice
C. The plan is new enough to get public attention. choice	**D.** Reducing missed-dose reports is important enough to help justify the plan, not just decorate it. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, health, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-036 | Level 2 | Answer C

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The test calendar starts on a Monday, which may stay true even if the measured result does not last. choice
C. The result from the short test will last long enough to matter after the rollout begins. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, workplace, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-037 | Level 2 | Answer B

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The grocery chain can explain the plan clearly to people outside the test group before asking for approval. choice	**B.** The people in the test are enough like the wider group for the result to matter outside the test. correct
C. The shelf labels use bold black numbers, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, retail, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-038 | Level 2 | Answer A

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The result is not better explained by another change that happened during the same test period. correct	**B.** The children's-book checkout desk moved six feet, which describes the setting but does not show what caused the result. choice
C. The library announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, public services, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-039 | Level 2 | Answer D

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Jordan says, "That means the plan helped site administrators." Which hidden assumption does Jordan's argument need?

A. Site administrators noticed the plan during the test period. choice	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. The login button changed from green to blue, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Improvement in the tracked result would count as a real sign of help for the target group. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, technology, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-040 | Level 2 | Answer C

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. Riley says, "If the plan can reduce reported thefts, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention. choice	**B.** The neighborhood association should focus on the side detail before asking whether the result matters. choice
C. A real change in reported thefts would be valuable enough to matter for this decision, not just be noticed. correct	**D.** The new light poles are made of aluminum, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, public safety, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-041 | Level 2 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The tutoring room has new chairs, which may stay true even if the measured result does not last. choice	**D.** The test result is not just a temporary bump that fades when the test is over. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, education, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-042 | Level 2 | Answer C

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The restaurant group can explain the plan clearly to people outside the test group before asking for approval. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct	**D.** The lunch menus are printed on thicker paper, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, nutrition, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-043 | Level 2 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The warning texts arrive from a short code, which describes the setting but does not show what caused the result. choice	**B.** The result is important enough to discuss before making a final decision. choice
C. Other changes during the test were not strong enough to explain the result better than the plan. correct	**D.** The bank announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, finance, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-044 | Level 2 | Answer A

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Taylor says, "That means the plan helped weekend trail hikers." Which hidden assumption does Taylor's argument need?

A. The measurement is close enough to the goal to show whether the group was actually helped. correct	**B.** Weekend trail hikers noticed the plan during the test period. choice
C. The digital passes include a small trail map, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, environment, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-045 | Level 2 | Answer A

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. Morgan says, "If the plan can increase family visits, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The goal of increasing family visits is important enough to help decide what to do. correct	**B.** The plan is new enough to get public attention. choice
C. The Friday tickets are scanned at the east door, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**D.** The museum should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, culture, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-046 | Level 2 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The improvement seen during the test will continue if the plan becomes permanent. correct
C. The short test is easy to summarize in one meeting. choice	**D.** The concussion checklist is printed on yellow paper, which may stay true even if the measured result does not last. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, sports, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-047 | Level 2 | Answer A

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct	**B.** The receipt email subject line changed, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The nonprofit can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, nonprofit, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-048 | Level 2 | Answer C

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The training room has a ceiling-mounted projector, which describes the setting but does not show what caused the result. choice	**B.** The result is important enough to discuss before making a final decision. choice
C. The plan is the best explanation of the result, not some other change during the same test period. correct	**D.** The warehouse announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, workplace safety, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-049 | Level 2 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Maya says, "That means the plan helped apartment residents." Which hidden assumption does Maya's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved. correct	**B.** The lobby compost bins have foot pedals, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Apartment residents noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, environment, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-050 | Level 2 | Answer C

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. Sam says, "If the plan can reduce publicly visible profiles, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The privacy screen uses a shield icon, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** The app maker should focus on the side detail before asking whether the result matters. choice
C. Publicly visible profiles matters enough that improving it could be a serious reason for the plan. correct	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, technology, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-051 | Level 2 | Answer C

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The appointment cards are white, which may stay true even if the measured result does not last. choice	**B.** The short test is easy to summarize in one meeting. choice
C. The four-week result is stable enough to be useful for a longer-term decision. correct	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, health, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-052 | Level 2 | Answer D

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The gate signs are backlit, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The airline can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, travel, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-053 | Level 2 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The landlord announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The result is important enough to discuss before making a final decision. choice
C. The repair portal uses a house logo, which describes the setting but does not show what caused the result. choice	**D.** No other major change during the test period better explains the result than the plan does. correct

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, housing, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-054 | Level 2 | Answer C

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Casey says, "That means the plan helped middle-school students." Which hidden assumption does Casey's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** Middle-school students noticed the plan during the test period. choice
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct	**D.** The fruit bowls are ceramic, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, food, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-055 | Level 2 | Answer B

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. Jordan says, "If the plan can reduce customer complaint rates, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The coaching slides use blue headers, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** Reducing customer complaint rates would matter enough to count in this decision, not just sound nice. correct
C. The call center should focus on the side detail before asking whether the result matters. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, customer support, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-056 | Level 2 | Answer A

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The short-term result will not disappear once the test period ends or the rollout begins. correct	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The water-leak alert screen includes a blue droplet icon, which may stay true even if the measured result does not last. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, utilities, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-057 | Level 2 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The reminder tone is two beeps, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The police department can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, governance, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-058 | Level 2 | Answer B

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The ballot-tracking page uses county colors, which describes the setting but does not show what caused the result. choice	**B.** Nothing else important changed during the same test period in a way that better explains the result. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The election office announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, election administration, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-059 | Level 2 | Answer D

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Avery says, "That means the plan helped language learners." Which hidden assumption does Avery's argument need?

A. The review prompts use a bell icon, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** Language learners noticed the plan during the test period. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** The result being measured is the right kind of evidence for whether the plan helped the group. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, learning, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-060 | Level 2 | Answer B

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. Taylor says, "If the plan can reduce new-member cancellations, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The gym should focus on the side detail before asking whether the result matters. choice	**B.** Reducing new-member cancellations is important enough to help justify the plan, not just decorate it. correct
C. The plan is new enough to get public attention. choice	**D.** The orientation mats are black, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, fitness, d2

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-061 | Level 2 | Answer B

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The result from the short test will last long enough to matter after the rollout begins. correct
C. The feedback dashboard uses star ratings, which may stay true even if the measured result does not last. choice	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, insurance, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-062 | Level 2 | Answer D

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The correction box has a gray border, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The newsroom can explain the plan clearly to people outside the test group before asking for approval. choice
C. The test result is interesting enough to discuss before the wider rollout. choice	**D.** The people in the test are enough like the wider group for the result to matter outside the test. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, media, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-063 | Level 2 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The result is not better explained by another change that happened during the same test period. correct	**B.** The result is important enough to discuss before making a final decision. choice
C. The stall price signs are laminated, which describes the setting but does not show what caused the result. choice	**D.** The farmers market announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, local commerce, d2

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-064 | Level 2 | Answer B

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Riley says, "That means the plan helped overnight hotel guests." Which hidden assumption does Riley's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** Improvement in the tracked result would count as a real sign of help for the target group. correct
C. Overnight hotel guests noticed the plan during the test period. choice	**D.** The quiet-hours text reminder uses a small moon icon, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, hospitality, d2

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

hidden_assumptions-065 | Level 3 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Sam says, "That means the plan helped late-shift workers." Which hidden assumption does Sam's argument need?

A. Late-shift workers noticed the plan during the test period. choice	**B.** The new buses were repainted blue, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Improvement in the tracked result would count as a real sign of help for the target group. correct	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, transportation, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-066 | Level 3 | Answer D

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. Avery says, "If the plan can reduce classroom disruption reports, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The plan is new enough to get public attention. choice	**B.** The lockers are installed near the gym, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The school board should focus on the side detail before asking whether the result matters. choice	**D.** A real change in classroom disruption reports would be valuable enough to matter for this decision, not just be noticed. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, education, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-067 | Level 3 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The test result is not just a temporary bump that fades when the test is over. correct	**B.** The short test is easy to summarize in one meeting. choice
C. The text messages use a green pill icon, which may stay true even if the measured result does not last. choice	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, health, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-068 | Level 3 | Answer B

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The test calendar starts on a Monday, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct
C. The company can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, workplace, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-069 | Level 3 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The grocery chain announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The result is important enough to discuss before making a final decision. choice
C. The result is not better explained by another change that happened during the same test period. correct	**D.** The shelf labels use bold black numbers, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, retail, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-070 | Level 3 | Answer D

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Jordan says, "That means the plan helped families checking out children's books." Which hidden assumption does Jordan's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** Families checking out children's books noticed the plan during the test period. choice
C. The children's-book checkout desk moved six feet, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** The measurement is close enough to the goal to show whether the group was actually helped. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, public services, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-071 | Level 3 | Answer A

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. Riley says, "If the plan can reduce admin account takeovers, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The goal of reducing admin account takeovers is important enough to help decide what to do. correct	**B.** The login button changed from green to blue, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The platform should focus on the side detail before asking whether the result matters. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, technology, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-072 | Level 3 | Answer B

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The improvement seen during the test will continue if the plan becomes permanent. correct
C. The new light poles are made of aluminum, which may stay true even if the measured result does not last. choice	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, public safety, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-073 | Level 3 | Answer C

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The tutoring room has new chairs, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct	**D.** The university can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, education, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-074 | Level 3 | Answer D

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The lunch menus are printed on thicker paper, which describes the setting but does not show what caused the result. choice	**B.** The restaurant group announced the plan before the measured result changed, so the timing should be listed in the report. choice
C. The result is important enough to discuss before making a final decision. choice	**D.** Other changes during the test were not strong enough to explain the result better than the plan. correct

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, nutrition, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-075 | Level 3 | Answer B

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Taylor says, "That means the plan helped checking-account customers." Which hidden assumption does Taylor's argument need?

A. Checking-account customers noticed the plan during the test period. choice	**B.** The tracked result is a fair way to judge whether the plan helped the people involved. correct
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** The warning texts arrive from a short code, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, finance, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-076 | Level 3 | Answer A

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. Morgan says, "If the plan can reduce trail crowding complaints, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. Trail crowding complaints matters enough that improving it could be a serious reason for the plan. correct	**B.** The digital passes include a small trail map, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The plan is new enough to get public attention. choice	**D.** The park service should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, environment, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-077 | Level 3 | Answer D

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The Friday tickets are scanned at the east door, which may stay true even if the measured result does not last. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The four-week result is stable enough to be useful for a longer-term decision. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, culture, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-078 | Level 3 | Answer C

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The concussion checklist is printed on yellow paper, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct	**D.** The sports league can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, sports, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-079 | Level 3 | Answer B

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The result is important enough to discuss before making a final decision. choice	**B.** The plan is the best explanation of the result, not some other change during the same test period. correct
C. The receipt email subject line changed, which describes the setting but does not show what caused the result. choice	**D.** The nonprofit announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, nonprofit, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-080 | Level 3 | Answer A

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Maya says, "That means the plan helped warehouse staff." Which hidden assumption does Maya's argument need?

A. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct	**B.** Warehouse staff noticed the plan during the test period. choice
C. The training room has a ceiling-mounted projector, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, workplace safety, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-081 | Level 3 | Answer D

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. Sam says, "If the plan can reduce landfill waste from participating buildings, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The plan is new enough to get public attention. choice	**B.** The city sanitation office should focus on the side detail before asking whether the result matters. choice
C. The lobby compost bins have foot pedals, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**D.** Reducing landfill waste from participating buildings would matter enough to count in this decision, not just sound nice. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, environment, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-082 | Level 3 | Answer C

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The short test is easy to summarize in one meeting. choice
C. The short-term result will not disappear once the test period ends or the rollout begins. correct	**D.** The privacy screen uses a shield icon, which may stay true even if the measured result does not last. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, technology, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-083 | Level 3 | Answer B

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct
C. The appointment cards are white, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The clinic can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, health, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-084 | Level 3 | Answer A

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. No other major change during the test period better explains the result than the plan does. correct	**B.** The result is important enough to discuss before making a final decision. choice
C. The gate signs are backlit, which describes the setting but does not show what caused the result. choice	**D.** The airline announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, travel, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-085 | Level 3 | Answer A

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Casey says, "That means the plan helped apartment tenants." Which hidden assumption does Casey's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group. correct	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. Apartment tenants noticed the plan during the test period. choice	**D.** The repair portal uses a house logo, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, housing, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-086 | Level 3 | Answer B

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. Jordan says, "If the plan can increase fruit purchases, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention. choice	**B.** Increasing fruit purchases is important enough to help justify the plan, not just decorate it. correct
C. The fruit bowls are ceramic, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**D.** The cafeteria should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, food, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-087 | Level 3 | Answer C

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The coaching slides use blue headers, which may stay true even if the measured result does not last. choice
C. The result from the short test will last long enough to matter after the rollout begins. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, customer support, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-088 | Level 3 | Answer D

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The water-leak alert screen includes a blue droplet icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The water utility can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The people in the test are enough like the wider group for the result to matter outside the test. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, utilities, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-089 | Level 3 | Answer A

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result. correct	**B.** The reminder tone is two beeps, which describes the setting but does not show what caused the result. choice
C. The police department announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, governance, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-090 | Level 3 | Answer B

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Avery says, "That means the plan helped mail voters." Which hidden assumption does Avery's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** Improvement in the tracked result would count as a real sign of help for the target group. correct
C. The ballot-tracking page uses county colors, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Mail voters noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, election administration, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-091 | Level 3 | Answer C

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. Taylor says, "If the plan can increase vocabulary retention quiz scores, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The plan is new enough to get public attention. choice	**B.** The tutoring app should focus on the side detail before asking whether the result matters. choice
C. A real change in vocabulary retention quiz scores would be valuable enough to matter for this decision, not just be noticed. correct	**D.** The review prompts use a bell icon, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, learning, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-092 | Level 3 | Answer D

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The orientation mats are black, which may stay true even if the measured result does not last. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The test result is not just a temporary bump that fades when the test is over. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, fitness, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-093 | Level 3 | Answer A

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct	**B.** The insurer can explain the plan clearly to people outside the test group before asking for approval. choice
C. The test result is interesting enough to discuss before the wider rollout. choice	**D.** The feedback dashboard uses star ratings, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, insurance, d3

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-094 | Level 3 | Answer B

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The newsroom announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The result is not better explained by another change that happened during the same test period. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The correction box has a gray border, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, media, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-095 | Level 3 | Answer D

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Riley says, "That means the plan helped weekend farmers market shoppers." Which hidden assumption does Riley's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** Weekend farmers market shoppers noticed the plan during the test period. choice
C. The stall price signs are laminated, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** The measurement is close enough to the goal to show whether the group was actually helped. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, local commerce, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-096 | Level 3 | Answer C

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. Maya says, "If the plan can reduce noise complaints from guest rooms, then it should be adopted." Which hidden assumption does Maya's argument need?

A. The quiet-hours text reminder uses a small moon icon, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** The hotel should focus on the side detail before asking whether the result matters. choice
C. The goal of reducing noise complaints from guest rooms is important enough to help decide what to do. correct	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, hospitality, d3

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

hidden_assumptions-097 | Level 4 | Answer D

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. Avery says, "If the plan can reduce late-shift commute complaints, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The city council should focus on the side detail before asking whether the result matters. choice	**B.** The new buses were repainted blue, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The plan is new enough to get public attention. choice	**D.** The goal of reducing late-shift commute complaints is important enough to help decide what to do. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, transportation, d4

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-098 | Level 4 | Answer C

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The lockers are installed near the gym, which may stay true even if the measured result does not last. choice
C. The improvement seen during the test will continue if the plan becomes permanent. correct	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, education, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-099 | Level 4 | Answer B

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct
C. The text messages use a green pill icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The hospital can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, health, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-100 | Level 4 | Answer A

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. Other changes during the test were not strong enough to explain the result better than the plan. correct	**B.** The test calendar starts on a Monday, which describes the setting but does not show what caused the result. choice
C. The company announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, workplace, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-101 | Level 4 | Answer D

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Jordan says, "That means the plan helped weekly grocery shoppers." Which hidden assumption does Jordan's argument need?

A. The shelf labels use bold black numbers, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. Weekly grocery shoppers noticed the plan during the test period. choice	**D.** The measurement is close enough to the goal to show whether the group was actually helped. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, retail, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-102 | Level 4 | Answer C

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. Riley says, "If the plan can increase library card renewals, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention. choice	**B.** The library should focus on the side detail before asking whether the result matters. choice
C. Library card renewals matters enough that improving it could be a serious reason for the plan. correct	**D.** The children's-book checkout desk moved six feet, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, public services, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-103 | Level 4 | Answer B

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The login button changed from green to blue, which may stay true even if the measured result does not last. choice	**B.** The four-week result is stable enough to be useful for a longer-term decision. correct
C. The short test is easy to summarize in one meeting. choice	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, technology, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-104 | Level 4 | Answer A

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The new light poles are made of aluminum, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The neighborhood association can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, public safety, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-105 | Level 4 | Answer D

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The university announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The tutoring room has new chairs, which describes the setting but does not show what caused the result. choice
C. The result is important enough to discuss before making a final decision. choice	**D.** The plan is the best explanation of the result, not some other change during the same test period. correct

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, education, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-106 | Level 4 | Answer C

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Taylor says, "That means the plan helped lunch customers." Which hidden assumption does Taylor's argument need?

A. Lunch customers noticed the plan during the test period. choice	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. The tracked result is a fair way to judge whether the plan helped the people involved. correct	**D.** The lunch menus are printed on thicker paper, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, nutrition, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-107 | Level 4 | Answer C

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. Morgan says, "If the plan can reduce overdraft fees, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The bank should focus on the side detail before asking whether the result matters. choice	**B.** The plan is new enough to get public attention. choice
C. Reducing overdraft fees would matter enough to count in this decision, not just sound nice. correct	**D.** The warning texts arrive from a short code, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, finance, d4

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-108 | Level 4 | Answer D

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The digital passes include a small trail map, which may stay true even if the measured result does not last. choice
C. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**D.** The short-term result will not disappear once the test period ends or the rollout begins. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, environment, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-109 | Level 4 | Answer A

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The museum can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The Friday tickets are scanned at the east door, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, culture, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-110 | Level 4 | Answer B

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The concussion checklist is printed on yellow paper, which describes the setting but does not show what caused the result. choice	**B.** No other major change during the test period better explains the result than the plan does. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The sports league announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, sports, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-111 | Level 4 | Answer C

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Maya says, "That means the plan helped first-time donors." Which hidden assumption does Maya's argument need?

A. First-time donors noticed the plan during the test period. choice	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct	**D.** The receipt email subject line changed, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, nonprofit, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-112 | Level 4 | Answer D

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. Sam says, "If the plan can reduce back-injury claims, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The plan is new enough to get public attention. choice	**B.** The training room has a ceiling-mounted projector, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The warehouse should focus on the side detail before asking whether the result matters. choice	**D.** Reducing back-injury claims is important enough to help justify the plan, not just decorate it. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, workplace safety, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-113 | Level 4 | Answer A

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The result from the short test will last long enough to matter after the rollout begins. correct	**B.** The lobby compost bins have foot pedals, which may stay true even if the measured result does not last. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, environment, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-114 | Level 4 | Answer B

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The privacy screen uses a shield icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The people in the test are enough like the wider group for the result to matter outside the test. correct
C. The app maker can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, technology, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-115 | Level 4 | Answer A

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result. correct	**B.** The clinic announced the plan before the measured result changed, so the timing should be listed in the report. choice
C. The appointment cards are white, which describes the setting but does not show what caused the result. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, health, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-116 | Level 4 | Answer B

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Casey says, "That means the plan helped domestic flight passengers." Which hidden assumption does Casey's argument need?

A. The gate signs are backlit, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** The result being measured is the right kind of evidence for whether the plan helped the group. correct
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Domestic flight passengers noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, travel, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-117 | Level 4 | Answer D

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. Jordan says, "If the plan can reduce unresolved repair requests, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention. choice	**B.** The landlord should focus on the side detail before asking whether the result matters. choice
C. The repair portal uses a house logo, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**D.** A real change in unresolved repair requests would be valuable enough to matter for this decision, not just be noticed. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, housing, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-118 | Level 4 | Answer C

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The short test is easy to summarize in one meeting. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The test result is not just a temporary bump that fades when the test is over. correct	**D.** The fruit bowls are ceramic, which may stay true even if the measured result does not last. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, food, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-119 | Level 4 | Answer B

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The coaching slides use blue headers, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct
C. The call center can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, customer support, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-120 | Level 4 | Answer A

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The result is not better explained by another change that happened during the same test period. correct	**B.** The water-leak alert screen includes a blue droplet icon, which describes the setting but does not show what caused the result. choice
C. The result is important enough to discuss before making a final decision. choice	**D.** The water utility announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, utilities, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-121 | Level 4 | Answer D

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Avery says, "That means the plan helped patrol officers." Which hidden assumption does Avery's argument need?

A. The reminder tone is two beeps, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** Patrol officers noticed the plan during the test period. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Improvement in the tracked result would count as a real sign of help for the target group. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, governance, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-122 | Level 4 | Answer C

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. Taylor says, "If the plan can reduce phone calls asking ballot status, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The ballot-tracking page uses county colors, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** The plan is new enough to get public attention. choice
C. The goal of reducing phone calls asking ballot status is important enough to help decide what to do. correct	**D.** The election office should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, election administration, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-123 | Level 4 | Answer B

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The review prompts use a bell icon, which may stay true even if the measured result does not last. choice	**B.** The improvement seen during the test will continue if the plan becomes permanent. correct
C. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, learning, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-124 | Level 4 | Answer A

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct	**B.** The orientation mats are black, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The gym can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, fitness, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-125 | Level 4 | Answer D

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The result is important enough to discuss before making a final decision. choice	**B.** The feedback dashboard uses star ratings, which describes the setting but does not show what caused the result. choice
C. The insurer announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** Other changes during the test were not strong enough to explain the result better than the plan. correct

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, insurance, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-126 | Level 4 | Answer C

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Riley says, "That means the plan helped newsletter readers." Which hidden assumption does Riley's argument need?

A. The correction box has a gray border, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** Newsletter readers noticed the plan during the test period. choice
C. The measurement is close enough to the goal to show whether the group was actually helped. correct	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, media, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-127 | Level 4 | Answer A

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. Maya says, "If the plan can reduce price disputes, then it should be adopted." Which hidden assumption does Maya's argument need?

A. Price disputes matters enough that improving it could be a serious reason for the plan. correct	**B.** The stall price signs are laminated, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The farmers market should focus on the side detail before asking whether the result matters. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, local commerce, d4

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-128 | Level 4 | Answer B

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Sam says, "The result will continue if the plan becomes permanent." Which hidden assumption does Sam's argument need?

A. The quiet-hours text reminder uses a small moon icon, which may stay true even if the measured result does not last. choice	**B.** The four-week result is stable enough to be useful for a longer-term decision. correct
C. The short test is easy to summarize in one meeting. choice	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, hospitality, d4

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

hidden_assumptions-129 | Level 5 | Answer C

Prompt. The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The new buses were repainted blue, which may stay true even if the measured result does not last. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The four-week result is stable enough to be useful for a longer-term decision. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, transportation, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-130 | Level 5 | Answer D

Prompt. The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The lockers are installed near the gym, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The school board can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, education, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-131 | Level 5 | Answer A

Prompt. The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The plan is the best explanation of the result, not some other change during the same test period. correct	**B.** The result is important enough to discuss before making a final decision. choice
C. The text messages use a green pill icon, which describes the setting but does not show what caused the result. choice	**D.** The hospital announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, health, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-132 | Level 5 | Answer B

Prompt. The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Jordan says, "That means the plan helped software engineers." Which hidden assumption does Jordan's argument need?

A. The test calendar starts on a Monday, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**B.** The tracked result is a fair way to judge whether the plan helped the people involved. correct
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Software engineers noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, workplace, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-133 | Level 5 | Answer C

Prompt. The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. Riley says, "If the plan can reduce shopper overpayment complaints, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention. choice	**B.** The grocery chain should focus on the side detail before asking whether the result matters. choice
C. Shopper overpayment complaints matters enough that improving it could be a serious reason for the plan. correct	**D.** The shelf labels use bold black numbers, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, retail, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-134 | Level 5 | Answer D

Prompt. The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The children's-book checkout desk moved six feet, which may stay true even if the measured result does not last. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The short-term result will not disappear once the test period ends or the rollout begins. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, public services, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-135 | Level 5 | Answer A

Prompt. The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct	**B.** The login button changed from green to blue, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice
C. The platform can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, technology, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-136 | Level 5 | Answer B

Prompt. The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The neighborhood association announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** No other major change during the test period better explains the result than the plan does. correct
C. The new light poles are made of aluminum, which describes the setting but does not show what caused the result. choice	**D.** The result is important enough to discuss before making a final decision. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, public safety, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-137 | Level 5 | Answer A

Prompt. The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Taylor says, "That means the plan helped first-year statistics students." Which hidden assumption does Taylor's argument need?

A. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number. correct	**B.** The tutoring room has new chairs, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** First-year statistics students noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, education, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-138 | Level 5 | Answer B

Prompt. The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. Morgan says, "If the plan can reduce dessert orders, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The lunch menus are printed on thicker paper, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** Reducing dessert orders would matter enough to count in this decision, not just sound nice. correct
C. The plan is new enough to get public attention. choice	**D.** The restaurant group should focus on the side detail before asking whether the result matters. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, nutrition, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

hidden_assumptions-139 | Level 5 | Answer D

Prompt. The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The warning texts arrive from a short code, which may stay true even if the measured result does not last. choice	**B.** The short test is easy to summarize in one meeting. choice
C. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**D.** The result from the short test will last long enough to matter after the rollout begins. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, finance, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-140 | Level 5 | Answer C

Prompt. The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The park service can explain the plan clearly to people outside the test group before asking for approval. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The people in the test are enough like the wider group for the result to matter outside the test. correct	**D.** The digital passes include a small trail map, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, environment, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-141 | Level 5 | Answer B

Prompt. The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The result is important enough to discuss before making a final decision. choice	**B.** Nothing else important changed during the same test period in a way that better explains the result. correct
C. The Friday tickets are scanned at the east door, which describes the setting but does not show what caused the result. choice	**D.** The museum announced the plan before the measured result changed, so the timing should be listed in the report. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, culture, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-142 | Level 5 | Answer A

Prompt. The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Maya says, "That means the plan helped youth soccer players." Which hidden assumption does Maya's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group. correct	**B.** Youth soccer players noticed the plan during the test period. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** The concussion checklist is printed on yellow paper, which may be true but is not a sign that the target group was helped or that the result mattered. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, sports, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-143 | Level 5 | Answer D

Prompt. The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. Sam says, "If the plan can increase donor retention, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The receipt email subject line changed, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**B.** The plan is new enough to get public attention. choice
C. The nonprofit should focus on the side detail before asking whether the result matters. choice	**D.** Increasing donor retention is important enough to help justify the plan, not just decorate it. correct

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, nonprofit, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-144 | Level 5 | Answer C

Prompt. The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The training room has a ceiling-mounted projector, which may stay true even if the measured result does not last. choice
C. The test result is not just a temporary bump that fades when the test is over. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, workplace safety, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-145 | Level 5 | Answer B

Prompt. The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The lobby compost bins have foot pedals, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan. correct
C. The city sanitation office can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The test result is interesting enough to discuss before the wider rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, environment, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-146 | Level 5 | Answer A

Prompt. The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The result is not better explained by another change that happened during the same test period. correct	**B.** The result is important enough to discuss before making a final decision. choice
C. The app maker announced the plan before the measured result changed, so the timing should be listed in the report. choice	**D.** The privacy screen uses a shield icon, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, technology, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-147 | Level 5 | Answer D

Prompt. The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Casey says, "That means the plan helped primary-care patients." Which hidden assumption does Casey's argument need?

A. Primary-care patients noticed the plan during the test period. choice	**B.** The appointment cards are white, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**D.** Improvement in the tracked result would count as a real sign of help for the target group. correct

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, health, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-148 | Level 5 | Answer C

Prompt. The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. Jordan says, "If the plan can reduce average boarding time, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention. choice	**B.** The airline should focus on the side detail before asking whether the result matters. choice
C. A real change in average boarding time would be valuable enough to matter for this decision, not just be noticed. correct	**D.** The gate signs are backlit, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, travel, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-149 | Level 5 | Answer C

Prompt. The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The repair portal uses a house logo, which may stay true even if the measured result does not last. choice
C. The improvement seen during the test will continue if the plan becomes permanent. correct	**D.** The short test is easy to summarize in one meeting. choice

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, housing, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-150 | Level 5 | Answer D

Prompt. The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The fruit bowls are ceramic, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The cafeteria can explain the plan clearly to people outside the test group before asking for approval. choice	**D.** The wider group is enough like the test group that the result is a fair clue for the decision outside the test. correct

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, food, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-151 | Level 5 | Answer A

Prompt. The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. Other changes during the test were not strong enough to explain the result better than the plan. correct	**B.** The call center announced the plan before the measured result changed, so the timing should be listed in the report. choice
C. The result is important enough to discuss before making a final decision. choice	**D.** The coaching slides use blue headers, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, customer support, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-152 | Level 5 | Answer B

Prompt. The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Avery says, "That means the plan helped local homeowners." Which hidden assumption does Avery's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice	**B.** The measurement is close enough to the goal to show whether the group was actually helped. correct
C. The water-leak alert screen includes a blue droplet icon, which may be true but is not a sign that the target group was helped or that the result mattered. choice	**D.** Local homeowners noticed the plan during the test period. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, utilities, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-153 | Level 5 | Answer C

Prompt. The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. Taylor says, "If the plan can reduce missing-camera-footage reports, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The police department should focus on the side detail before asking whether the result matters. choice	**B.** The reminder tone is two beeps, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice
C. The goal of reducing missing-camera-footage reports is important enough to help decide what to do. correct	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, governance, d5

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-154 | Level 5 | Answer D

Prompt. The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most. choice	**B.** The short test is easy to summarize in one meeting. choice
C. The ballot-tracking page uses county colors, which may stay true even if the measured result does not last. choice	**D.** The four-week result is stable enough to be useful for a longer-term decision. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, election administration, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-155 | Level 5 | Answer A

Prompt. The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The test setting matches the bigger decision closely enough for the result to matter beyond the trial. correct	**B.** The test result is interesting enough to discuss before the wider rollout. choice
C. The review prompts use a bell icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice	**D.** The tutoring app can explain the plan clearly to people outside the test group before asking for approval. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, learning, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

hidden_assumptions-156 | Level 5 | Answer B

Prompt. The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The gym announced the plan before the measured result changed, so the timing should be listed in the report. choice	**B.** The plan is the best explanation of the result, not some other change during the same test period. correct
C. The result is important enough to discuss before making a final decision. choice	**D.** The orientation mats are black, which describes the setting but does not show what caused the result. choice

Core explanation. The hidden assumption is that the result came from the plan, not from another cause.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, cause-link, fitness, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

hidden_assumptions-157 | Level 5 | Answer A

Prompt. The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Riley says, "That means the plan helped auto-insurance policyholders." Which hidden assumption does Riley's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved. correct	**B.** The feedback dashboard uses star ratings, which may be true but is not a sign that the target group was helped or that the result mattered. choice
C. Auto-insurance policyholders noticed the plan during the test period. choice	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing. choice

Core explanation. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, measure-link, insurance, d5

A feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

hidden_assumptions-158 | Level 5 | Answer B

Prompt. The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. Maya says, "If the plan can increase reader trust ratings, then it should be adopted." Which hidden assumption does Maya's argument need?

A. The newsroom should focus on the side detail before asking whether the result matters. choice	**B.** Reader trust ratings matters enough that improving it could be a serious reason for the plan. correct
C. The correction box has a gray border, which may affect presentation but does not show that the goal is worth pursuing or important enough. choice	**D.** The plan is new enough to get public attention. choice

Core explanation. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, goal-worth, media, d5

A feedback (Distractor): Not quite. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

hidden_assumptions-159 | Level 5 | Answer D

Prompt. The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Sam says, "The result will continue if the plan becomes permanent." Which hidden assumption does Sam's argument need?

A. The stall price signs are laminated, which may stay true even if the measured result does not last. choice	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most. choice
C. The short test is easy to summarize in one meeting. choice	**D.** The short-term result will not disappear once the test period ends or the rollout begins. correct

Core explanation. The hidden assumption is that the short test result will last long enough to matter.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, lasting-result, local commerce, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

hidden_assumptions-160 | Level 5 | Answer C

Prompt. The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Avery argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Avery's argument need?

A. The test result is interesting enough to discuss before the wider rollout. choice	**B.** The hotel can explain the plan clearly to people outside the test group before asking for approval. choice
C. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test. correct	**D.** The quiet-hours text reminder uses a small moon icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout. choice

Core explanation. The hidden assumption is that the test is a fair guide to the bigger decision.

Process commentary. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

Tags: hidden_assumptions, assumption, scale-up, hospitality, d5

A feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C feedback (Correct): Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D feedback (Distractor): Not quite. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Skill 05

Test Relevance

Does That Matter?

Decide whether a fact actually matters for the claim. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Which fact actually helps us judge the claim?
Why it matters	Relevant evidence bears on the claim; irrelevant detail merely stands nearby. This skill protects students from being impressed by vivid facts that do not actually test the point at issue.
Conceptual core	Relevance is about fit. Evidence can be vivid, surprising, or emotionally interesting while still not bearing on the claim. Students should learn to anchor each relevance judgment in the claim's action, target group, and outcome. A relevant fact does not have to prove the claim by itself; it just has to make the claim easier or harder to assess.
Student method	Match the evidence to the claim's action, group, and measured result. If a fact does not help decide whether that specific claim is true, it is probably a side detail.
Analogy	Relevance is a spotlight. A bright detail can still be pointed at the wrong part of the stage.
Assessment focus	A good answer identifies the fact that bears most directly on the claim's action, target group, and outcome.

Teaching Sequence

1. Circle the action, group, and outcome in the claim.

2. Ask whether each option speaks to one of those anchors.

3. Reject decorative details that only share the same topic.

4. Prefer evidence from similar conditions when the claim is about whether a plan will work.

Common Confusions To Watch For

1. Students may pick a fact because it mentions the same setting or people.

2. Students may think irrelevant means false, even though irrelevant facts can be true.

3. Students may demand conclusive proof when the task only asks what matters most.

Teacher Prompts

1. Does this fact help decide the claim, or does it just sit near the claim?

2. Which part of the claim does this evidence touch?

3. If this fact changed, would our view of the claim change?

Worked Example

Scenario	A hotel manager claims quiet-hour text reminders will reduce hallway noise complaints from overnight guests.
Teacher think-aloud	A photo of the hotel lobby is not relevant. Complaint rates after a similar reminder program at comparable hotels are relevant because they match the action and outcome.
Student takeaway	Relevant evidence touches the exact claim, not just the general topic.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A hotel manager claims text reminders reduce hallway noise complaints. Fact A: comparable floors receiving reminders had four complaints per 100 occupied room-nights, versus seven on floors without reminders in the same month. Fact B: most guests liked the new lobby painting. A room-night means one occupied room for one night.

What To Do

1. Name the action and the outcome in the claim.

2. Choose which fact bears directly on the claim and explain the connection.

3. Explain why the other fact does not answer this question, even if it is true.

Check before reading the answer. Have you linked the evidence to reminders and noise complaints, rather than to general guest satisfaction?

Model Answer

The action is sending text reminders; the outcome is hallway noise complaints. Fact A compares that outcome with and without reminders using the same unit. Fact B concerns a painting and does not show whether reminders affect noise complaints.

Why it is adequate. The answer explains relevance through the specific action and outcome. Relevance alone does not prove the comparison establishes cause.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

relevance-001 | Level 1 | Answer A

Prompt. Riley claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions. correct	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed. choice	**D.** The new buses were repainted blue. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, transportation, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-002 | Level 1 | Answer B

Prompt. Maya claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed. choice	**B.** Researchers measured the actual result before and after the plan was tried. correct
C. The lockers are installed near the gym. choice	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, education, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-003 | Level 1 | Answer C

Prompt. Sam claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed. choice	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result. choice
C. The actual result was measured in the group the proposal is meant to help. correct	**D.** The text messages use a green pill icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, health, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-004 | Level 1 | Answer D

Prompt. Avery claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed. choice	**B.** The test calendar starts on a Monday. choice
C. A report says some software engineers liked the idea, but it does not check the claimed result. choice	**D.** A matched group that did not use the plan was tracked so the result could be compared. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, workplace, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-005 | Level 1 | Answer A

Prompt. Taylor claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The report checked shopper overpayment complaints, not just whether people said they liked the idea. correct	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed. choice	**D.** The shelf labels use bold black numbers. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, retail, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-006 | Level 1 | Answer B

Prompt. Morgan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. The children's-book checkout desk moved six feet. choice	**B.** Another group in a similar setting used the plan and the same result improved. correct
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, public services, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-007 | Level 1 | Answer C

Prompt. Casey claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue. choice	**B.** A report says some site administrators liked the idea, but it does not check the claimed result. choice
C. The report tracked the claimed result both before the plan and after the plan. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, technology, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-008 | Level 1 | Answer D

Prompt. Jordan claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed. choice
C. A report says some residents on Maple Street liked the idea, but it does not check the claimed result. choice	**D.** The report checks the claimed result among the people the plan is supposed to affect. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, public safety, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-009 | Level 1 | Answer C

Prompt. Riley claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs. choice	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result. choice
C. Researchers included a similar group without the plan, giving the result a fair comparison. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, education, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-010 | Level 1 | Answer D

Prompt. Maya claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed. choice	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result. choice
C. The lunch menus are printed on thicker paper. choice	**D.** Direct measurement tracks dessert orders instead of only asking whether the plan sounds good. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, nutrition, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-011 | Level 1 | Answer B

Prompt. Sam claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed. choice	**B.** A comparable group tried the plan, and the result being checked moved in the right direction. correct
C. The warning texts arrive from a short code. choice	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, finance, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-012 | Level 1 | Answer D

Prompt. Avery claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map. choice	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed. choice	**D.** Before-and-after data compare the result from before the plan with the result after it began. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, environment, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-013 | Level 1 | Answer B

Prompt. Taylor claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door. choice	**B.** Data come from the target group, not from a different group with different needs. correct
C. A report says some local families liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, culture, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-014 | Level 1 | Answer A

Prompt. Morgan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A comparison group was tracked at the same time, so the plan's result could be checked. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed. choice
C. A report says some youth soccer players liked the idea, but it does not check the claimed result. choice	**D.** The concussion checklist is printed on yellow paper. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, sports, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-015 | Level 1 | Answer D

Prompt. Casey claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. The receipt email subject line changed. choice	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed. choice	**D.** The report focuses on donor retention, which is the result named in the claim. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, nonprofit, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-016 | Level 1 | Answer C

Prompt. Jordan claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed. choice	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result. choice
C. A similar group used the plan under similar conditions and the tracked result improved. correct	**D.** The training room has a ceiling-mounted projector. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, workplace safety, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-017 | Level 1 | Answer B

Prompt. Riley claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed. choice	**B.** A careful check focused on the result named in the claim, not just people's reactions to the idea. correct
C. A report says some apartment residents liked the idea, but it does not check the claimed result. choice	**D.** The lobby compost bins have foot pedals. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, environment, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-018 | Level 1 | Answer A

Prompt. Maya claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Researchers looked at the result for the same people the proposal is meant to help. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed. choice
C. A report says some new app users liked the idea, but it does not check the claimed result. choice	**D.** The privacy screen uses a shield icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, technology, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-019 | Level 1 | Answer D

Prompt. Sam claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed. choice	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result. choice
C. The appointment cards are white. choice	**D.** The report compares the target group with a similar group that did not use the plan. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, health, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-020 | Level 1 | Answer B

Prompt. Avery claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed. choice	**B.** A careful check measured whether average boarding time changed, not merely whether people approved of the plan. correct
C. The gate signs are backlit. choice	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, travel, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-021 | Level 1 | Answer A

Prompt. Taylor claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area. correct	**B.** A report says some apartment tenants liked the idea, but it does not check the claimed result. choice
C. The repair portal uses a house logo. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, housing, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-022 | Level 1 | Answer C

Prompt. Morgan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic. choice	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result. choice
C. The report measures whether the result actually changed after the plan was used. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, food, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-023 | Level 1 | Answer C

Prompt. Casey claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed. choice	**B.** The coaching slides use blue headers. choice
C. The report measures the claimed result in the group named in the proposal. correct	**D.** A report says some support agents liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, customer support, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-024 | Level 1 | Answer D

Prompt. Jordan claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The water-leak alert screen includes a blue droplet icon. choice	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed. choice	**D.** A no-plan group was measured too, making the result easier to interpret. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, utilities, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-025 | Level 1 | Answer C

Prompt. Riley claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed. choice
C. Because it is about missing-camera-footage reports, the fact speaks to the exact result being claimed. correct	**D.** The reminder tone is two beeps. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, governance, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-026 | Level 1 | Answer D

Prompt. Maya claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed. choice
C. The ballot-tracking page uses county colors. choice	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, election administration, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-027 | Level 1 | Answer A

Prompt. Sam claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed. choice
C. The review prompts use a bell icon. choice	**D.** A report says some language learners liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, learning, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-028 | Level 1 | Answer B

Prompt. Avery claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result. choice	**B.** The actual result was measured in the group the proposal is meant to help. correct
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed. choice	**D.** The orientation mats are black. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, fitness, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-029 | Level 1 | Answer C

Prompt. Taylor claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed. choice
C. A matched group that did not use the plan was tracked so the result could be compared. correct	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, insurance, d1

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-030 | Level 1 | Answer A

Prompt. Morgan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The report checked reader trust ratings, not just whether people said they liked the idea. correct	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result. choice
C. The correction box has a gray border. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, media, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-031 | Level 1 | Answer B

Prompt. Casey claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed. choice	**B.** Another group in a similar setting used the plan and the same result improved. correct
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result. choice	**D.** The stall price signs are laminated. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, local commerce, d1

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-032 | Level 1 | Answer A

Prompt. Jordan claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan. correct	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed. choice	**D.** The quiet-hours text reminder uses a small moon icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, hospitality, d1

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

relevance-033 | Level 2 | Answer B

Prompt. Maya claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. The new buses were repainted blue. choice	**B.** The report tracked the claimed result both before the plan and after the plan. correct
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed. choice	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, transportation, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-034 | Level 2 | Answer A

Prompt. Sam claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect. correct	**B.** The lockers are installed near the gym. choice
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed. choice	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, education, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-035 | Level 2 | Answer D

Prompt. Avery claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed. choice	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result. choice
C. The text messages use a green pill icon. choice	**D.** Researchers included a similar group without the plan, giving the result a fair comparison. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, health, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-036 | Level 2 | Answer C

Prompt. Taylor claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A report says some software engineers liked the idea, but it does not check the claimed result. choice	**B.** The test calendar starts on a Monday. choice
C. Direct measurement tracks staff resignations instead of only asking whether the plan sounds good. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, workplace, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-037 | Level 2 | Answer B

Prompt. Morgan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The shelf labels use bold black numbers. choice	**B.** Another group in a similar setting used the plan and the same result improved. correct
C. A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, retail, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-038 | Level 2 | Answer A

Prompt. Casey claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed. choice
C. The children's-book checkout desk moved six feet. choice	**D.** A report says some families checking out children's books liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, public services, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-039 | Level 2 | Answer D

Prompt. Jordan claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue. choice	**B.** A report says some site administrators liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed. choice	**D.** Data come from the target group, not from a different group with different needs. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, technology, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-040 | Level 2 | Answer C

Prompt. Riley claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum. choice	**B.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result. choice
C. A comparison group was tracked at the same time, so the plan's result could be checked. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, public safety, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-041 | Level 2 | Answer B

Prompt. Maya claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs. choice	**B.** The report focuses on course pass rates, which is the result named in the claim. correct
C. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed. choice	**D.** A report says some first-year statistics students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, education, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-042 | Level 2 | Answer A

Prompt. Sam claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed. choice
C. The lunch menus are printed on thicker paper. choice	**D.** A report says some lunch customers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, nutrition, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-043 | Level 2 | Answer C

Prompt. Avery claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed. choice	**B.** The warning texts arrive from a short code. choice
C. A careful check focused on the result named in the claim, not just people's reactions to the idea. correct	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, finance, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-044 | Level 2 | Answer D

Prompt. Taylor claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed. choice	**B.** The digital passes include a small trail map. choice
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result. choice	**D.** Researchers looked at the result for the same people the proposal is meant to help. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, environment, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-045 | Level 2 | Answer A

Prompt. Morgan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed. choice
C. The Friday tickets are scanned at the east door. choice	**D.** A report says some local families liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, culture, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-046 | Level 2 | Answer B

Prompt. Casey claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed. choice	**B.** A careful check measured whether repeat head injuries changed, not merely whether people approved of the plan. correct
C. A report says some youth soccer players liked the idea, but it does not check the claimed result. choice	**D.** The concussion checklist is printed on yellow paper. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, sports, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-047 | Level 2 | Answer C

Prompt. Jordan claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed. choice	**B.** The receipt email subject line changed. choice
C. A similar group used the plan under similar conditions and the tracked result improved. correct	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, nonprofit, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-048 | Level 2 | Answer D

Prompt. Riley claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result. choice	**B.** The training room has a ceiling-mounted projector. choice
C. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed. choice	**D.** The report measures whether the result actually changed after the plan was used. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, workplace safety, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-049 | Level 2 | Answer A

Prompt. Maya claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal. correct	**B.** A report says some apartment residents liked the idea, but it does not check the claimed result. choice
C. The lobby compost bins have foot pedals. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, environment, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-050 | Level 2 | Answer B

Prompt. Sam claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The privacy screen uses a shield icon. choice	**B.** A no-plan group was measured too, making the result easier to interpret. correct
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed. choice	**D.** A report says some new app users liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, technology, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-051 | Level 2 | Answer C

Prompt. Avery claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed. choice	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result. choice
C. Because it is about patient no-show rates, the fact speaks to the exact result being claimed. correct	**D.** The appointment cards are white. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, health, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-052 | Level 2 | Answer D

Prompt. Taylor claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed. choice	**B.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result. choice
C. The gate signs are backlit. choice	**D.** A group like the target group tried the plan and saw the result improve in the same area. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-053 | Level 2 | Answer D

Prompt. Morgan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result. choice	**B.** The repair portal uses a house logo. choice
C. A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed. choice	**D.** Researchers measured the actual result before and after the plan was tried. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, housing, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-054 | Level 2 | Answer C

Prompt. Casey claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A report says some middle-school students liked the idea, but it does not check the claimed result. choice	**B.** The fruit bowls are ceramic. choice
C. The actual result was measured in the group the proposal is meant to help. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, food, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-055 | Level 2 | Answer B

Prompt. Jordan claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers. choice	**B.** A matched group that did not use the plan was tracked so the result could be compared. correct
C. A report says some support agents liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, customer support, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-056 | Level 2 | Answer A

Prompt. Riley claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The report checked average household water use, not just whether people said they liked the idea. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether average household water use changed. choice
C. A report says some local homeowners liked the idea, but it does not check the claimed result. choice	**D.** The water-leak alert screen includes a blue droplet icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, utilities, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-057 | Level 2 | Answer D

Prompt. Maya claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result. choice	**B.** The reminder tone is two beeps. choice
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed. choice	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, governance, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-058 | Level 2 | Answer C

Prompt. Sam claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors. choice	**B.** A report says some mail voters liked the idea, but it does not check the claimed result. choice
C. The report tracked the claimed result both before the plan and after the plan. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, election administration, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-059 | Level 2 | Answer B

Prompt. Avery claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result. choice	**B.** The report checks the claimed result among the people the plan is supposed to affect. correct
C. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed. choice	**D.** The review prompts use a bell icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, learning, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-060 | Level 2 | Answer A

Prompt. Taylor claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. Researchers included a similar group without the plan, giving the result a fair comparison. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed. choice
C. A report says some new gym members liked the idea, but it does not check the claimed result. choice	**D.** The orientation mats are black. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, fitness, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-061 | Level 2 | Answer D

Prompt. Morgan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed. choice
C. A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result. choice	**D.** Direct measurement tracks reported minor crashes instead of only asking whether the plan sounds good. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, insurance, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-062 | Level 2 | Answer C

Prompt. Casey claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The correction box has a gray border. choice	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result. choice
C. Another group in a similar setting used the plan and the same result improved. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, media, d2

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-063 | Level 2 | Answer A

Prompt. Jordan claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began. correct	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result. choice
C. The stall price signs are laminated. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether price disputes changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, local commerce, d2

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-064 | Level 2 | Answer B

Prompt. Riley claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed. choice	**B.** Data come from the target group, not from a different group with different needs. correct
C. The quiet-hours text reminder uses a small moon icon. choice	**D.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, hospitality, d2

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

relevance-065 | Level 3 | Answer A

Prompt. Sam claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Data come from the target group, not from a different group with different needs. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed. choice
C. A report says some late-shift workers liked the idea, but it does not check the claimed result. choice	**D.** The new buses were repainted blue. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, transportation, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-066 | Level 3 | Answer B

Prompt. Avery claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym. choice	**B.** A comparison group was tracked at the same time, so the plan's result could be checked. correct
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed. choice	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, education, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-067 | Level 3 | Answer C

Prompt. Taylor claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed. choice
C. The report focuses on missed-dose reports, which is the result named in the claim. correct	**D.** The text messages use a green pill icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, health, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-068 | Level 3 | Answer D

Prompt. Morgan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. The test calendar starts on a Monday. choice	**B.** A report says some software engineers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed. choice	**D.** A comparable group tried the plan, and the result being checked moved in the right direction. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, workplace, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-069 | Level 3 | Answer A

Prompt. Casey claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began. correct	**B.** The shelf labels use bold black numbers. choice
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed. choice	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, retail, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-070 | Level 3 | Answer B

Prompt. Jordan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed. choice	**B.** Researchers looked at the result for the same people the proposal is meant to help. correct
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result. choice	**D.** The children's-book checkout desk moved six feet. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, public services, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-071 | Level 3 | Answer C

Prompt. Riley claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A report says some site administrators liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed. choice
C. The report compares the target group with a similar group that did not use the plan. correct	**D.** The login button changed from green to blue. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, technology, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-072 | Level 3 | Answer D

Prompt. Maya claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed. choice
C. The new light poles are made of aluminum. choice	**D.** A careful check measured whether reported thefts changed, not merely whether people approved of the plan. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, public safety, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-073 | Level 3 | Answer C

Prompt. Sam claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed. choice	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result. choice
C. A similar group used the plan under similar conditions and the tracked result improved. correct	**D.** The tutoring room has new chairs. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, education, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-074 | Level 3 | Answer D

Prompt. Avery claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed. choice
C. The lunch menus are printed on thicker paper. choice	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, nutrition, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-075 | Level 3 | Answer D

Prompt. Taylor claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code. choice	**B.** A report says some checking-account customers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed. choice	**D.** The report measures the claimed result in the group named in the proposal. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, finance, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-076 | Level 3 | Answer C

Prompt. Morgan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map. choice	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result. choice
C. A no-plan group was measured too, making the result easier to interpret. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, environment, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-077 | Level 3 | Answer B

Prompt. Casey claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door. choice	**B.** Because it is about family visits, the fact speaks to the exact result being claimed. correct
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed. choice	**D.** A report says some local families liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, culture, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-078 | Level 3 | Answer A

Prompt. Jordan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed. choice
C. The concussion checklist is printed on yellow paper. choice	**D.** A report says some youth soccer players liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, sports, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-079 | Level 3 | Answer D

Prompt. Riley claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A report says some first-time donors liked the idea, but it does not check the claimed result. choice	**B.** The receipt email subject line changed. choice
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed. choice	**D.** The report measures whether the result actually changed after the plan was used. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, nonprofit, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-080 | Level 3 | Answer C

Prompt. Maya claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed. choice
C. The actual result was measured in the group the proposal is meant to help. correct	**D.** The training room has a ceiling-mounted projector. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, workplace safety, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-081 | Level 3 | Answer B

Prompt. Sam claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The lobby compost bins have foot pedals. choice	**B.** A matched group that did not use the plan was tracked so the result could be compared. correct
C. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed. choice	**D.** A report says some apartment residents liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, environment, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-082 | Level 3 | Answer A

Prompt. Avery claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The report checked publicly visible profiles, not just whether people said they liked the idea. correct	**B.** A report says some new app users liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed. choice	**D.** The privacy screen uses a shield icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, technology, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-083 | Level 3 | Answer B

Prompt. Taylor claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed. choice	**B.** A comparable group tried the plan and saw the tracked result improve under similar conditions. correct
C. A report says some primary-care patients liked the idea, but it does not check the claimed result. choice	**D.** The appointment cards are white. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, health, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-084 | Level 3 | Answer A

Prompt. Morgan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed. choice
C. The gate signs are backlit. choice	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, travel, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-085 | Level 3 | Answer A

Prompt. Casey claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect. correct	**B.** The repair portal uses a house logo. choice
C. A report says some apartment tenants liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, housing, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-086 | Level 3 | Answer B

Prompt. Jordan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic. choice	**B.** Researchers included a similar group without the plan, giving the result a fair comparison. correct
C. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed. choice	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, food, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-087 | Level 3 | Answer C

Prompt. Riley claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed. choice	**B.** A report says some support agents liked the idea, but it does not check the claimed result. choice
C. Direct measurement tracks customer complaint rates instead of only asking whether the plan sounds good. correct	**D.** The coaching slides use blue headers. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, customer support, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-088 | Level 3 | Answer D

Prompt. Maya claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A report says some local homeowners liked the idea, but it does not check the claimed result. choice	**B.** The water-leak alert screen includes a blue droplet icon. choice
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed. choice	**D.** Another group in a similar setting used the plan and the same result improved. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, utilities, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-089 | Level 3 | Answer A

Prompt. Sam claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan. correct	**B.** A report says some patrol officers liked the idea, but it does not check the claimed result. choice
C. The reminder tone is two beeps. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, governance, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-090 | Level 3 | Answer B

Prompt. Avery claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result. choice	**B.** Data come from the target group, not from a different group with different needs. correct
C. The ballot-tracking page uses county colors. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, election administration, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-091 | Level 3 | Answer C

Prompt. Taylor claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result. choice	**B.** The review prompts use a bell icon. choice
C. A comparison group was tracked at the same time, so the plan's result could be checked. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, learning, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-092 | Level 3 | Answer D

Prompt. Morgan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result. choice	**B.** The orientation mats are black. choice
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed. choice	**D.** The report focuses on new-member cancellations, which is the result named in the claim. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, fitness, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-093 | Level 3 | Answer A

Prompt. Casey claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction. correct	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result. choice
C. The feedback dashboard uses star ratings. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, insurance, d3

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-094 | Level 3 | Answer B

Prompt. Jordan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed. choice	**B.** Before-and-after data compare the result from before the plan with the result after it began. correct
C. The correction box has a gray border. choice	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, media, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-095 | Level 3 | Answer D

Prompt. Riley claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed. choice	**B.** The stall price signs are laminated. choice
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result. choice	**D.** Researchers looked at the result for the same people the proposal is meant to help. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, local commerce, d3

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-096 | Level 3 | Answer C

Prompt. Maya claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The quiet-hours text reminder uses a small moon icon. choice	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result. choice
C. The report compares the target group with a similar group that did not use the plan. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, hospitality, d3

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

relevance-097 | Level 4 | Answer B

Prompt. Avery claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed. choice	**B.** The report compares the target group with a similar group that did not use the plan. correct
C. The new buses were repainted blue. choice	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, transportation, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-098 | Level 4 | Answer A

Prompt. Taylor claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A careful check measured whether classroom disruption reports changed, not merely whether people approved of the plan. correct	**B.** A report says some ninth-grade students liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed. choice	**D.** The lockers are installed near the gym. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, education, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-099 | Level 4 | Answer D

Prompt. Morgan claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed. choice	**B.** The text messages use a green pill icon. choice
C. A report says some patients over 60 liked the idea, but it does not check the claimed result. choice	**D.** A similar group used the plan under similar conditions and the tracked result improved. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, health, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-100 | Level 4 | Answer C

Prompt. Casey claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed. choice	**B.** The test calendar starts on a Monday. choice
C. A careful check focused on the result named in the claim, not just people's reactions to the idea. correct	**D.** A report says some software engineers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, workplace, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-101 | Level 4 | Answer B

Prompt. Jordan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed. choice	**B.** Researchers looked at the result for the same people the proposal is meant to help. correct
C. The shelf labels use bold black numbers. choice	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, retail, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-102 | Level 4 | Answer A

Prompt. Riley claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret. correct	**B.** A report says some families checking out children's books liked the idea, but it does not check the claimed result. choice
C. The children's-book checkout desk moved six feet. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, public services, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-103 | Level 4 | Answer D

Prompt. Maya claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed. choice	**B.** The login button changed from green to blue. choice
C. A report says some site administrators liked the idea, but it does not check the claimed result. choice	**D.** Because it is about admin account takeovers, the fact speaks to the exact result being claimed. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, technology, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-104 | Level 4 | Answer C

Prompt. Sam claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed. choice
C. A group like the target group tried the plan and saw the result improve in the same area. correct	**D.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, public safety, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-105 | Level 4 | Answer D

Prompt. Avery claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed. choice
C. A report says some first-year statistics students liked the idea, but it does not check the claimed result. choice	**D.** The report measures whether the result actually changed after the plan was used. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, education, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-106 | Level 4 | Answer C

Prompt. Taylor claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed. choice	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result. choice
C. The report measures the claimed result in the group named in the proposal. correct	**D.** The lunch menus are printed on thicker paper. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, nutrition, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-107 | Level 4 | Answer C

Prompt. Morgan claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed. choice
C. A matched group that did not use the plan was tracked so the result could be compared. correct	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, finance, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-108 | Level 4 | Answer D

Prompt. Casey claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed. choice	**B.** The digital passes include a small trail map. choice
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result. choice	**D.** The report checked trail crowding complaints, not just whether people said they liked the idea. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, environment, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-109 | Level 4 | Answer A

Prompt. Jordan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions. correct	**B.** A report says some local families liked the idea, but it does not check the claimed result. choice
C. The Friday tickets are scanned at the east door. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, culture, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-110 | Level 4 | Answer B

Prompt. Riley claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The concussion checklist is printed on yellow paper. choice	**B.** Researchers measured the actual result before and after the plan was tried. correct
C. A report says some youth soccer players liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, sports, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-111 | Level 4 | Answer C

Prompt. Maya claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed. choice	**B.** The receipt email subject line changed. choice
C. The actual result was measured in the group the proposal is meant to help. correct	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, nonprofit, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-112 | Level 4 | Answer D

Prompt. Sam claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed. choice	**B.** The training room has a ceiling-mounted projector. choice
C. A report says some warehouse staff liked the idea, but it does not check the claimed result. choice	**D.** Researchers included a similar group without the plan, giving the result a fair comparison. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, workplace safety, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-113 | Level 4 | Answer A

Prompt. Avery claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. Direct measurement tracks landfill waste from participating buildings instead of only asking whether the plan sounds good. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed. choice
C. A report says some apartment residents liked the idea, but it does not check the claimed result. choice	**D.** The lobby compost bins have foot pedals. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, environment, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-114 | Level 4 | Answer B

Prompt. Taylor claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed. choice	**B.** Another group in a similar setting used the plan and the same result improved. correct
C. A report says some new app users liked the idea, but it does not check the claimed result. choice	**D.** The privacy screen uses a shield icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, technology, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-115 | Level 4 | Answer A

Prompt. Morgan claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan. correct	**B.** The appointment cards are white. choice
C. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed. choice	**D.** A report says some primary-care patients liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, health, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-116 | Level 4 | Answer B

Prompt. Casey claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit. choice	**B.** The report checks the claimed result among the people the plan is supposed to affect. correct
C. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed. choice	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, travel, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-117 | Level 4 | Answer D

Prompt. Jordan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed. choice
C. The repair portal uses a house logo. choice	**D.** A comparison group was tracked at the same time, so the plan's result could be checked. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, housing, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-118 | Level 4 | Answer C

Prompt. Riley claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed. choice	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result. choice
C. The report focuses on fruit purchases, which is the result named in the claim. correct	**D.** The fruit bowls are ceramic. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, food, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-119 | Level 4 | Answer B

Prompt. Maya claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed. choice	**B.** A comparable group tried the plan, and the result being checked moved in the right direction. correct
C. The coaching slides use blue headers. choice	**D.** A report says some support agents liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, customer support, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-120 | Level 4 | Answer A

Prompt. Sam claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began. correct	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed. choice	**D.** The water-leak alert screen includes a blue droplet icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, utilities, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-121 | Level 4 | Answer D

Prompt. Avery claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed. choice
C. The reminder tone is two beeps. choice	**D.** Data come from the target group, not from a different group with different needs. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, governance, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-122 | Level 4 | Answer C

Prompt. Taylor claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors. choice	**B.** A report says some mail voters liked the idea, but it does not check the claimed result. choice
C. The report compares the target group with a similar group that did not use the plan. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, election administration, d4

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-123 | Level 4 | Answer B

Prompt. Morgan claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed. choice	**B.** A careful check measured whether vocabulary retention quiz scores changed, not merely whether people approved of the plan. correct
C. A report says some language learners liked the idea, but it does not check the claimed result. choice	**D.** The review prompts use a bell icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, learning, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-124 | Level 4 | Answer A

Prompt. Casey claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A similar group used the plan under similar conditions and the tracked result improved. correct	**B.** A report says some new gym members liked the idea, but it does not check the claimed result. choice
C. The orientation mats are black. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, fitness, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-125 | Level 4 | Answer D

Prompt. Jordan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed. choice	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result. choice
C. The feedback dashboard uses star ratings. choice	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, insurance, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-126 | Level 4 | Answer C

Prompt. Riley claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed. choice	**B.** The correction box has a gray border. choice
C. Researchers looked at the result for the same people the proposal is meant to help. correct	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, media, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-127 | Level 4 | Answer A

Prompt. Maya claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret. correct	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed. choice	**D.** The stall price signs are laminated. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, local commerce, d4

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-128 | Level 4 | Answer B

Prompt. Sam claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A report says some overnight hotel guests liked the idea, but it does not check the claimed result. choice	**B.** Because it is about noise complaints from guest rooms, the fact speaks to the exact result being claimed. correct
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed. choice	**D.** The quiet-hours text reminder uses a small moon icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, hospitality, d4

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

relevance-129 | Level 5 | Answer A

Prompt. Taylor claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Because it is about late-shift commute complaints, the fact speaks to the exact result being claimed. correct	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result. choice
C. The new buses were repainted blue. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, transportation, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-130 | Level 5 | Answer B

Prompt. Morgan claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym. choice	**B.** A group like the target group tried the plan and saw the result improve in the same area. correct
C. A report says some ninth-grade students liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, education, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-131 | Level 5 | Answer C

Prompt. Casey claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed. choice
C. The report measures whether the result actually changed after the plan was used. correct	**D.** The text messages use a green pill icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, health, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-132 | Level 5 | Answer D

Prompt. Jordan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed. choice	**B.** The test calendar starts on a Monday. choice
C. A report says some software engineers liked the idea, but it does not check the claimed result. choice	**D.** The report measures the claimed result in the group named in the proposal. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, workplace, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-133 | Level 5 | Answer A

Prompt. Riley claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret. correct	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result. choice
C. The shelf labels use bold black numbers. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, retail, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-134 | Level 5 | Answer B

Prompt. Maya claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed. choice	**B.** The report checked library card renewals, not just whether people said they liked the idea. correct
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result. choice	**D.** The children's-book checkout desk moved six feet. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, public services, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-135 | Level 5 | Answer C

Prompt. Sam claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed. choice	**B.** The login button changed from green to blue. choice
C. A comparable group tried the plan and saw the tracked result improve under similar conditions. correct	**D.** A report says some site administrators liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, technology, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-136 | Level 5 | Answer D

Prompt. Avery claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result. choice	**B.** The new light poles are made of aluminum. choice
C. A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed. choice	**D.** Researchers measured the actual result before and after the plan was tried. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, public safety, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-137 | Level 5 | Answer C

Prompt. Taylor claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed. choice	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result. choice
C. The actual result was measured in the group the proposal is meant to help. correct	**D.** The tutoring room has new chairs. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, education, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-138 | Level 5 | Answer D

Prompt. Morgan claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result. choice	**B.** The lunch menus are printed on thicker paper. choice
C. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed. choice	**D.** A matched group that did not use the plan was tracked so the result could be compared. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, nutrition, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-139 | Level 5 | Answer D

Prompt. Casey claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed. choice
C. A report says some checking-account customers liked the idea, but it does not check the claimed result. choice	**D.** Direct measurement tracks overdraft fees instead of only asking whether the plan sounds good. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, finance, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-140 | Level 5 | Answer C

Prompt. Jordan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A report says some weekend trail hikers liked the idea, but it does not check the claimed result. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed. choice
C. Another group in a similar setting used the plan and the same result improved. correct	**D.** The digital passes include a small trail map. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, environment, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-141 | Level 5 | Answer B

Prompt. Riley claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door. choice	**B.** The report tracked the claimed result both before the plan and after the plan. correct
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed. choice	**D.** A report says some local families liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, culture, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-142 | Level 5 | Answer A

Prompt. Maya claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect. correct	**B.** The concussion checklist is printed on yellow paper. choice
C. A report says some youth soccer players liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, sports, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-143 | Level 5 | Answer D

Prompt. Sam claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed. choice	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result. choice
C. The receipt email subject line changed. choice	**D.** Researchers included a similar group without the plan, giving the result a fair comparison. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, nonprofit, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-144 | Level 5 | Answer C

Prompt. Avery claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. The training room has a ceiling-mounted projector. choice	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result. choice
C. The report focuses on back-injury claims, which is the result named in the claim. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, workplace safety, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-145 | Level 5 | Answer B

Prompt. Taylor claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed. choice	**B.** A comparable group tried the plan, and the result being checked moved in the right direction. correct
C. A report says some apartment residents liked the idea, but it does not check the claimed result. choice	**D.** The lobby compost bins have foot pedals. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, environment, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-146 | Level 5 | Answer A

Prompt. Morgan claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began. correct	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed. choice
C. A report says some new app users liked the idea, but it does not check the claimed result. choice	**D.** The privacy screen uses a shield icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, technology, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-147 | Level 5 | Answer D

Prompt. Casey claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed. choice	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result. choice
C. The appointment cards are white. choice	**D.** Data come from the target group, not from a different group with different needs. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, health, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-148 | Level 5 | Answer C

Prompt. Jordan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed. choice
C. A comparison group was tracked at the same time, so the plan's result could be checked. correct	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, travel, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-149 | Level 5 | Answer A

Prompt. Riley claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A careful check measured whether unresolved repair requests changed, not merely whether people approved of the plan. correct	**B.** The repair portal uses a house logo. choice
C. A report says some apartment tenants liked the idea, but it does not check the claimed result. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-150 | Level 5 | Answer B

Prompt. Maya claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed. choice	**B.** A similar group used the plan under similar conditions and the tracked result improved. correct
C. The fruit bowls are ceramic. choice	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, food, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-151 | Level 5 | Answer C

Prompt. Sam claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers. choice	**B.** A report says some support agents liked the idea, but it does not check the claimed result. choice
C. A careful check focused on the result named in the claim, not just people's reactions to the idea. correct	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, customer support, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-152 | Level 5 | Answer D

Prompt. Avery claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed. choice	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result. choice
C. The water-leak alert screen includes a blue droplet icon. choice	**D.** Researchers looked at the result for the same people the proposal is meant to help. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-153 | Level 5 | Answer A

Prompt. Taylor claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan. correct	**B.** The reminder tone is two beeps. choice
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed. choice	**D.** A report says some patrol officers liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, governance, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-154 | Level 5 | Answer B

Prompt. Morgan claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result. choice	**B.** Because it is about phone calls asking ballot status, the fact speaks to the exact result being claimed. correct
C. The ballot-tracking page uses county colors. choice	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, election administration, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-155 | Level 5 | Answer C

Prompt. Casey claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. The review prompts use a bell icon. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed. choice
C. A group like the target group tried the plan and saw the result improve in the same area. correct	**D.** A report says some language learners liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, learning, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-156 | Level 5 | Answer D

Prompt. Jordan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. The orientation mats are black. choice	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed. choice
C. A report says some new gym members liked the idea, but it does not check the claimed result. choice	**D.** The report measures whether the result actually changed after the plan was used. correct

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, direct-measure, fitness, d5

A feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

relevance-157 | Level 5 | Answer A

Prompt. Riley claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal. correct	**B.** The feedback dashboard uses star ratings. choice
C. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed. choice	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, target-group, insurance, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

relevance-158 | Level 5 | Answer B

Prompt. Maya claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A report says some newsletter readers liked the idea, but it does not check the claimed result. choice	**B.** A no-plan group was measured too, making the result easier to interpret. correct
C. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed. choice	**D.** The correction box has a gray border. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, comparison-group, media, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-159 | Level 5 | Answer B

Prompt. Sam claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result. choice	**B.** The report checked price disputes, not just whether people said they liked the idea. correct
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed. choice	**D.** The stall price signs are laminated. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, outcome-specific, local commerce, d5

A feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

relevance-160 | Level 5 | Answer A

Prompt. Avery claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions. correct	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result. choice
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed. choice	**D.** The quiet-hours text reminder uses a small moon icon. choice

Core explanation. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

Process commentary. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

Tags: relevance, similar-group, hospitality, d5

A feedback (Correct): Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C feedback (Distractor): Not quite. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D feedback (Distractor): Not quite. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Skill 06

Evaluate Evidence Quality

How Good Is the Evidence?

Pick the strongest evidence from the details given. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How strong is the evidence for this claim?
Why it matters	Not all evidence deserves the same weight. A story, a tiny survey, a biased report, and a well-designed comparison can all sound like evidence, but they do different amounts of work.
Conceptual core	Evidence quality depends on directness, comparison, measurement, sample size, and transparency. Students should learn that a piece of evidence can be relevant but still weak. A single anecdote, a vague report, or a tiny unrepresentative survey may point in a direction without carrying much weight. The skill is comparative: choose the option that would deserve the most confidence under the facts given.
Student method	Prefer evidence that measures the claimed result directly, uses a fair comparison, includes enough cases, and makes the method visible. Be cautious with anecdotes, impressions, and unsupported explanations.
Analogy	Evidence quality is like camera focus. A blurry photo may show something, but a clear, well-framed photo deserves more confidence.
Assessment focus	A good answer selects the option with better direct measurement, comparison, sample, and transparency.

Teaching Sequence

1. Ask whether the evidence measures the claimed outcome directly.

2. Look for a fair comparison or baseline.

3. Check whether the sample is large enough and similar enough to the target group.

4. Prefer visible methods over impressions and unexplained summaries.

Common Confusions To Watch For

1. Students may treat any number as strong evidence because it looks precise.

2. Students may overvalue a personal story when the claim is about a larger group.

3. Students may ignore whether the measurement matches the outcome in the claim.

Teacher Prompts

1. What was measured, and was it the right thing?

2. Compared with what?

3. How many cases, and were they like the group in the claim?

Worked Example

Scenario	A tutoring program claims it improves algebra pass rates. One happy student gives a testimonial, while a district report compares pass rates in similar classes with and without tutoring.
Teacher think-aloud	The testimonial is relevant but weak. The comparison report is stronger because it uses the right outcome, a comparison group, and more cases.
Student takeaway	Strong evidence is relevant evidence with better design.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A tutoring program claims it raises algebra pass rates. Report A quotes one volunteer saying tutoring helped. Report B follows 200 students randomly assigned to receive tutoring or usual support, uses the same exam, and reports all results: 70 of 100 tutored students pass, versus 55 of 100 others. Both reports are accurately described; use only these facts.

What To Do

1. Choose the stronger evidence for the program's claim.

2. Give three reasons using the number of students, the comparison groups, and the outcome measure.

3. State one limit: what would you still want to know before assuming the result applies to another school?

Check before reading the answer. Explain the evidence's method rather than treating a confident testimonial or a large number alone as decisive.

Model Answer

Report B is stronger: it includes 200 students rather than one selected volunteer, random assignment supplies a fairer comparison, and a common exam measures the stated outcome. I would check whether another school's students and tutoring program are similar before transferring the conclusion.

Why it is adequate. It connects three stated design features to the claim and keeps a local result separate from a universal promise.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

evidence_quality-001 | Level 1 | Answer C

Prompt. Riley wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A large, fair study measured late-shift commute complaints before and after the change. correct	**D.** A report measured late-shift commute complaints after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, transportation, d1

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-002 | Level 1 | Answer D

Prompt. Maya wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A report measured classroom disruption reports after the change but did not say what it was before the plan. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups. choice	**D.** A random test compared similar groups with and without the change, then measured classroom disruption reports. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, education, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-003 | Level 1 | Answer A

Prompt. Sam wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Independent researchers used the same method to measure missed-dose reports before and after the plan. correct	**B.** Sam's friend says the idea feels promising but gives no data about missed-dose reports. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured missed-dose reports after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, health, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-004 | Level 1 | Answer B

Prompt. Avery wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Several similar settings tried the plan, and each one measured staff resignations the same way. correct
C. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups. choice	**D.** A report measured staff resignations after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, workplace, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-005 | Level 1 | Answer C

Prompt. Taylor wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about shopper overpayment complaints. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. The study reported its sample size, comparison method, and results for shopper overpayment complaints. correct	**D.** A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, retail, d1

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-006 | Level 1 | Answer D

Prompt. Morgan wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups. choice	**B.** Morgan's friend says the idea feels promising but gives no data about library card renewals. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Many people were included, and researchers measured library card renewals before and after the plan. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, public services, d1

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-007 | Level 1 | Answer A

Prompt. Casey wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. Similar groups were randomly assigned to use or not use the plan, then admin account takeovers was measured. correct	**B.** Casey's friend says the idea feels promising but gives no data about admin account takeovers. choice
C. A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups. choice	**D.** A report measured admin account takeovers after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, technology, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-008 | Level 1 | Answer B

Prompt. Jordan wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A report measured reported thefts after the change but did not say what it was before the plan. choice	**B.** A team not connected to the proposal measured reported thefts with the same method each time. correct
C. A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, public safety, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-009 | Level 1 | Answer A

Prompt. Riley wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. The plan was tried in several similar places, with course pass rates measured consistently in each one. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Riley's friend says the idea feels promising but gives no data about course pass rates. choice	**D.** A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, education, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-010 | Level 1 | Answer B

Prompt. Maya wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. A report measured dessert orders after the change but did not say what it was before the plan. choice	**B.** The report gave the sample size, comparison method, and measured result for dessert orders. correct
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, nutrition, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-011 | Level 1 | Answer B

Prompt. Sam wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. A report measured overdraft fees after the change but did not say what it was before the plan. choice	**B.** A fair before-and-after study used a large sample to track overdraft fees. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, finance, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-012 | Level 1 | Answer A

Prompt. Avery wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked trail crowding complaints. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Avery's friend says the idea feels promising but gives no data about trail crowding complaints. choice	**D.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, environment, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-013 | Level 1 | Answer D

Prompt. Taylor wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups. choice	**B.** A report measured family visits after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Outside researchers checked family visits before and after the plan using a consistent method. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, culture, d1

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-014 | Level 1 | Answer C

Prompt. Morgan wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about repeat head injuries. choice	**B.** A report measured repeat head injuries after the change but did not say what it was before the plan. choice
C. Multiple similar settings tracked repeat head injuries using the same method after trying the plan. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, sports, d1

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-015 | Level 1 | Answer B

Prompt. Casey wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to donor retention. correct
C. Casey's friend says the idea feels promising but gives no data about donor retention. choice	**D.** A report measured donor retention after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, nonprofit, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-016 | Level 1 | Answer A

Prompt. Jordan wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Researchers used a large sample and checked back-injury claims both before and after the change. correct	**B.** A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured back-injury claims after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, workplace safety, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-017 | Level 1 | Answer D

Prompt. Riley wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about landfill waste from participating buildings. choice	**B.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan. choice
C. A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups. choice	**D.** The plan was tested against a similar no-plan group chosen by random assignment. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, environment, d1

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-018 | Level 1 | Answer C

Prompt. Maya wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. A report measured publicly visible profiles after the change but did not say what it was before the plan. choice	**B.** A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups. choice
C. The measurement was done by an independent team using the same rules before and after. correct	**D.** Maya's friend says the idea feels promising but gives no data about publicly visible profiles. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, technology, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-019 | Level 1 | Answer D

Prompt. Sam wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Sam's friend says the idea feels promising but gives no data about patient no-show rates. choice
C. A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups. choice	**D.** Results from several similar places were checked with the same measure of patient no-show rates. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, health, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-020 | Level 1 | Answer C

Prompt. Avery wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A study write-up included the sample size, method, and results for average boarding time. correct	**D.** Avery's friend says the idea feels promising but gives no data about average boarding time. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, travel, d1

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-021 | Level 1 | Answer A

Prompt. Taylor wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. The evidence covers many cases and measures unresolved repair requests on both sides of the change. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Taylor's friend says the idea feels promising but gives no data about unresolved repair requests. choice	**D.** A report measured unresolved repair requests after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, housing, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-022 | Level 1 | Answer B

Prompt. Morgan wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A fair random comparison measured fruit purchases in both the plan group and the no-plan group. correct
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups. choice	**D.** Morgan's friend says the idea feels promising but gives no data about fruit purchases. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, food, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-023 | Level 1 | Answer C

Prompt. Casey wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. People outside the project collected comparable before-and-after data on customer complaint rates. correct	**D.** Casey's friend says the idea feels promising but gives no data about customer complaint rates. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, customer support, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-024 | Level 1 | Answer D

Prompt. Jordan wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Jordan's friend says the idea feels promising but gives no data about average household water use. choice
C. A report measured average household water use after the change but did not say what it was before the plan. choice	**D.** Comparable sites each tried the plan and used the same method to track average household water use. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, utilities, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-025 | Level 1 | Answer A

Prompt. Riley wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. The evidence states who was measured, how the comparison worked, and what changed in missing-camera-footage reports. correct	**B.** A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups. choice
C. Riley's friend says the idea feels promising but gives no data about missing-camera-footage reports. choice	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, governance, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-026 | Level 1 | Answer B

Prompt. Maya wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups. choice	**B.** A large, fair study measured phone calls asking ballot status before and after the change. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, election administration, d1

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-027 | Level 1 | Answer D

Prompt. Sam wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan. choice
C. Sam's friend says the idea feels promising but gives no data about vocabulary retention quiz scores. choice	**D.** A random test compared similar groups with and without the change, then measured vocabulary retention quiz scores. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, learning, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-028 | Level 1 | Answer B

Prompt. Avery wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. A report measured new-member cancellations after the change but did not say what it was before the plan. choice	**B.** Independent researchers used the same method to measure new-member cancellations before and after the plan. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, fitness, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-029 | Level 1 | Answer C

Prompt. Taylor wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about reported minor crashes. choice	**B.** A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups. choice
C. Several similar settings tried the plan, and each one measured reported minor crashes the same way. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, insurance, d1

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-030 | Level 1 | Answer D

Prompt. Morgan wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Morgan's friend says the idea feels promising but gives no data about reader trust ratings. choice
C. A report measured reader trust ratings after the change but did not say what it was before the plan. choice	**D.** The study reported its sample size, comparison method, and results for reader trust ratings. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, media, d1

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-031 | Level 1 | Answer A

Prompt. Casey wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Many people were included, and researchers measured price disputes before and after the plan. correct	**B.** Casey's friend says the idea feels promising but gives no data about price disputes. choice
C. A report measured price disputes after the change but did not say what it was before the plan. choice	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, local commerce, d1

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-032 | Level 1 | Answer C

Prompt. Jordan wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Similar groups were randomly assigned to use or not use the plan, then noise complaints from guest rooms was measured. correct	**D.** Jordan's friend says the idea feels promising but gives no data about noise complaints from guest rooms. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, hospitality, d1

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

evidence_quality-033 | Level 2 | Answer B

Prompt. Maya wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about late-shift commute complaints. choice	**B.** Similar groups were randomly assigned to use or not use the plan, then late-shift commute complaints was measured. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, transportation, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-034 | Level 2 | Answer A

Prompt. Sam wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A team not connected to the proposal measured classroom disruption reports with the same method each time. correct	**B.** A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups. choice
C. A report measured classroom disruption reports after the change but did not say what it was before the plan. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, education, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-035 | Level 2 | Answer D

Prompt. Avery wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups. choice
C. A report measured missed-dose reports after the change but did not say what it was before the plan. choice	**D.** The plan was tried in several similar places, with missed-dose reports measured consistently in each one. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, health, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-036 | Level 2 | Answer C

Prompt. Taylor wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. A report measured staff resignations after the change but did not say what it was before the plan. choice	**B.** A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups. choice
C. The report gave the sample size, comparison method, and measured result for staff resignations. correct	**D.** Taylor's friend says the idea feels promising but gives no data about staff resignations. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, workplace, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-037 | Level 2 | Answer B

Prompt. Morgan wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. A report measured shopper overpayment complaints after the change but did not say what it was before the plan. choice	**B.** Many people were included, and researchers measured shopper overpayment complaints before and after the plan. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Morgan's friend says the idea feels promising but gives no data about shopper overpayment complaints. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, retail, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-038 | Level 2 | Answer A

Prompt. Casey wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked library card renewals. correct	**B.** A report measured library card renewals after the change but did not say what it was before the plan. choice
C. Casey's friend says the idea feels promising but gives no data about library card renewals. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, public services, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-039 | Level 2 | Answer D

Prompt. Jordan wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups. choice	**B.** A report measured admin account takeovers after the change but did not say what it was before the plan. choice
C. Jordan's friend says the idea feels promising but gives no data about admin account takeovers. choice	**D.** Outside researchers checked admin account takeovers before and after the plan using a consistent method. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, technology, d2

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-040 | Level 2 | Answer C

Prompt. Riley wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured reported thefts after the change but did not say what it was before the plan. choice
C. Multiple similar settings tracked reported thefts using the same method after trying the plan. correct	**D.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, public safety, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-041 | Level 2 | Answer B

Prompt. Maya wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to course pass rates. correct
C. A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups. choice	**D.** Maya's friend says the idea feels promising but gives no data about course pass rates. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, education, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-042 | Level 2 | Answer A

Prompt. Sam wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. A fair before-and-after study used a large sample to track dessert orders. correct	**B.** Sam's friend says the idea feels promising but gives no data about dessert orders. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured dessert orders after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, nutrition, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-043 | Level 2 | Answer A

Prompt. Avery wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment. correct	**B.** A report measured overdraft fees after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Avery's friend says the idea feels promising but gives no data about overdraft fees. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, finance, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-044 | Level 2 | Answer B

Prompt. Taylor wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups. choice	**B.** The measurement was done by an independent team using the same rules before and after. correct
C. Taylor's friend says the idea feels promising but gives no data about trail crowding complaints. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, environment, d2

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-045 | Level 2 | Answer C

Prompt. Morgan wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about family visits. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Results from several similar places were checked with the same measure of family visits. correct	**D.** A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, culture, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-046 | Level 2 | Answer D

Prompt. Casey wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. Casey's friend says the idea feels promising but gives no data about repeat head injuries. choice	**B.** A report measured repeat head injuries after the change but did not say what it was before the plan. choice
C. A brochure explains how adding mandatory sideline concussion checks would work but does not measure repeat head injuries or compare groups. choice	**D.** A study write-up included the sample size, method, and results for repeat head injuries. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, sports, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-047 | Level 2 | Answer C

Prompt. Jordan wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Jordan's friend says the idea feels promising but gives no data about donor retention. choice
C. Researchers used a large sample and checked donor retention both before and after the change. correct	**D.** A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, nonprofit, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-048 | Level 2 | Answer A

Prompt. Riley wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. A fair random comparison measured back-injury claims in both the plan group and the no-plan group. correct	**B.** Riley's friend says the idea feels promising but gives no data about back-injury claims. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured back-injury claims after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, workplace safety, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-049 | Level 2 | Answer C

Prompt. Maya wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups. choice
C. People outside the project collected comparable before-and-after data on landfill waste from participating buildings. correct	**D.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, environment, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-050 | Level 2 | Answer A

Prompt. Sam wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Comparable sites each tried the plan and used the same method to track publicly visible profiles. correct	**B.** A report measured publicly visible profiles after the change but did not say what it was before the plan. choice
C. A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, technology, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-051 | Level 2 | Answer C

Prompt. Avery wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups. choice	**B.** Avery's friend says the idea feels promising but gives no data about patient no-show rates. choice
C. The evidence states who was measured, how the comparison worked, and what changed in patient no-show rates. correct	**D.** A report measured patient no-show rates after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, health, d2

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-052 | Level 2 | Answer A

Prompt. Taylor wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. The evidence covers many cases and measures average boarding time on both sides of the change. correct	**B.** A report measured average boarding time after the change but did not say what it was before the plan. choice
C. Taylor's friend says the idea feels promising but gives no data about average boarding time. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, travel, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-053 | Level 2 | Answer B

Prompt. Morgan wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups. choice	**B.** A random test compared similar groups with and without the change, then measured unresolved repair requests. correct
C. Morgan's friend says the idea feels promising but gives no data about unresolved repair requests. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, housing, d2

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-054 | Level 2 | Answer D

Prompt. Casey wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. A report measured fruit purchases after the change but did not say what it was before the plan. choice	**B.** Casey's friend says the idea feels promising but gives no data about fruit purchases. choice
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups. choice	**D.** Independent researchers used the same method to measure fruit purchases before and after the plan. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, food, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-055 | Level 2 | Answer B

Prompt. Jordan wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Several similar settings tried the plan, and each one measured customer complaint rates the same way. correct
C. A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups. choice	**D.** Jordan's friend says the idea feels promising but gives no data about customer complaint rates. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, customer support, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-056 | Level 2 | Answer A

Prompt. Riley wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. The study reported its sample size, comparison method, and results for average household water use. correct	**B.** A report measured average household water use after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, utilities, d2

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-057 | Level 2 | Answer B

Prompt. Maya wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about missing-camera-footage reports. choice	**B.** A large, fair study measured missing-camera-footage reports before and after the change. correct
C. A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups. choice	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, governance, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-058 | Level 2 | Answer D

Prompt. Sam wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups. choice	**B.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Similar groups were randomly assigned to use or not use the plan, then phone calls asking ballot status was measured. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, election administration, d2

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-059 | Level 2 | Answer B

Prompt. Avery wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Avery's friend says the idea feels promising but gives no data about vocabulary retention quiz scores. choice	**B.** A team not connected to the proposal measured vocabulary retention quiz scores with the same method each time. correct
C. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, learning, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-060 | Level 2 | Answer D

Prompt. Taylor wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about new-member cancellations. choice	**B.** A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** The plan was tried in several similar places, with new-member cancellations measured consistently in each one. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, fitness, d2

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-061 | Level 2 | Answer D

Prompt. Morgan wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A report measured reported minor crashes after the change but did not say what it was before the plan. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Morgan's friend says the idea feels promising but gives no data about reported minor crashes. choice	**D.** The report gave the sample size, comparison method, and measured result for reported minor crashes. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, insurance, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-062 | Level 2 | Answer C

Prompt. Casey wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A report measured reader trust ratings after the change but did not say what it was before the plan. choice	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups. choice
C. Many people were included, and researchers measured reader trust ratings before and after the plan. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, media, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-063 | Level 2 | Answer C

Prompt. Jordan wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Jordan's friend says the idea feels promising but gives no data about price disputes. choice
C. Researchers randomly compared a plan group with a no-plan group and tracked price disputes. correct	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, local commerce, d2

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-064 | Level 2 | Answer D

Prompt. Riley wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan. choice	**B.** Riley's friend says the idea feels promising but gives no data about noise complaints from guest rooms. choice
C. A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups. choice	**D.** Outside researchers checked noise complaints from guest rooms before and after the plan using a consistent method. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, hospitality, d2

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

evidence_quality-065 | Level 3 | Answer A

Prompt. Sam wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. Outside researchers checked late-shift commute complaints before and after the plan using a consistent method. correct	**B.** Sam's friend says the idea feels promising but gives no data about late-shift commute complaints. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured late-shift commute complaints after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, transportation, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-066 | Level 3 | Answer B

Prompt. Avery wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Multiple similar settings tracked classroom disruption reports using the same method after trying the plan. correct
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups. choice	**D.** Avery's friend says the idea feels promising but gives no data about classroom disruption reports. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, education, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-067 | Level 3 | Answer C

Prompt. Taylor wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about missed-dose reports. choice	**B.** A report measured missed-dose reports after the change but did not say what it was before the plan. choice
C. Researchers listed how many cases were studied, how they compared them, and what happened to missed-dose reports. correct	**D.** A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, health, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-068 | Level 3 | Answer D

Prompt. Morgan wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups. choice	**B.** Morgan's friend says the idea feels promising but gives no data about staff resignations. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A fair before-and-after study used a large sample to track staff resignations. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, workplace, d3

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-069 | Level 3 | Answer A

Prompt. Casey wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked shopper overpayment complaints. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups. choice	**D.** Casey's friend says the idea feels promising but gives no data about shopper overpayment complaints. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, retail, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-070 | Level 3 | Answer B

Prompt. Jordan wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan. choice	**B.** The measurement was done by an independent team using the same rules before and after. correct
C. A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, public services, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-071 | Level 3 | Answer C

Prompt. Riley wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A report measured admin account takeovers after the change but did not say what it was before the plan. choice	**B.** Riley's friend says the idea feels promising but gives no data about admin account takeovers. choice
C. Results from several similar places were checked with the same measure of admin account takeovers. correct	**D.** A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, technology, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-072 | Level 3 | Answer D

Prompt. Maya wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A report measured reported thefts after the change but did not say what it was before the plan. choice	**B.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A study write-up included the sample size, method, and results for reported thefts. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, public safety, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-073 | Level 3 | Answer C

Prompt. Sam wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Sam's friend says the idea feels promising but gives no data about course pass rates. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Researchers used a large sample and checked course pass rates both before and after the change. correct	**D.** A report measured course pass rates after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, education, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-074 | Level 3 | Answer D

Prompt. Avery wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured dessert orders after the change but did not say what it was before the plan. choice
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups. choice	**D.** The plan was tested against a similar no-plan group chosen by random assignment. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, nutrition, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-075 | Level 3 | Answer B

Prompt. Taylor wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** People outside the project collected comparable before-and-after data on overdraft fees. correct
C. A report measured overdraft fees after the change but did not say what it was before the plan. choice	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, finance, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-076 | Level 3 | Answer D

Prompt. Morgan wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups. choice
C. Morgan's friend says the idea feels promising but gives no data about trail crowding complaints. choice	**D.** Comparable sites each tried the plan and used the same method to track trail crowding complaints. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, environment, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-077 | Level 3 | Answer B

Prompt. Casey wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The evidence states who was measured, how the comparison worked, and what changed in family visits. correct
C. A report measured family visits after the change but did not say what it was before the plan. choice	**D.** Casey's friend says the idea feels promising but gives no data about family visits. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, culture, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-078 | Level 3 | Answer A

Prompt. Jordan wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. The evidence covers many cases and measures repeat head injuries on both sides of the change. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A report measured repeat head injuries after the change but did not say what it was before the plan. choice	**D.** Jordan's friend says the idea feels promising but gives no data about repeat head injuries. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, sports, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-079 | Level 3 | Answer D

Prompt. Riley wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about donor retention. choice	**B.** A report measured donor retention after the change but did not say what it was before the plan. choice
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups. choice	**D.** A fair random comparison measured donor retention in both the plan group and the no-plan group. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, nonprofit, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-080 | Level 3 | Answer C

Prompt. Maya wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups. choice
C. Independent researchers used the same method to measure back-injury claims before and after the plan. correct	**D.** Maya's friend says the idea feels promising but gives no data about back-injury claims. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, workplace safety, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-081 | Level 3 | Answer B

Prompt. Sam wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A report measured landfill waste from participating buildings after the change but did not say what it was before the plan. choice	**B.** Several similar settings tried the plan, and each one measured landfill waste from participating buildings the same way. correct
C. Sam's friend says the idea feels promising but gives no data about landfill waste from participating buildings. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, environment, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-082 | Level 3 | Answer A

Prompt. Avery wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. The study reported its sample size, comparison method, and results for publicly visible profiles. correct	**B.** A report measured publicly visible profiles after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Avery's friend says the idea feels promising but gives no data about publicly visible profiles. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, technology, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-083 | Level 3 | Answer D

Prompt. Taylor wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Taylor's friend says the idea feels promising but gives no data about patient no-show rates. choice
C. A report measured patient no-show rates after the change but did not say what it was before the plan. choice	**D.** A large, fair study measured patient no-show rates before and after the change. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, health, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-084 | Level 3 | Answer B

Prompt. Morgan wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about average boarding time. choice	**B.** A random test compared similar groups with and without the change, then measured average boarding time. correct
C. A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups. choice	**D.** A report measured average boarding time after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, travel, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-085 | Level 3 | Answer A

Prompt. Casey wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A team not connected to the proposal measured unresolved repair requests with the same method each time. correct	**B.** A report measured unresolved repair requests after the change but did not say what it was before the plan. choice
C. Casey's friend says the idea feels promising but gives no data about unresolved repair requests. choice	**D.** A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, housing, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-086 | Level 3 | Answer C

Prompt. Jordan wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Jordan's friend says the idea feels promising but gives no data about fruit purchases. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. The plan was tried in several similar places, with fruit purchases measured consistently in each one. correct	**D.** A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, food, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-087 | Level 3 | Answer C

Prompt. Riley wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan. choice	**B.** Riley's friend says the idea feels promising but gives no data about customer complaint rates. choice
C. The report gave the sample size, comparison method, and measured result for customer complaint rates. correct	**D.** A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, customer support, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-088 | Level 3 | Answer D

Prompt. Maya wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about average household water use. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups. choice	**D.** Many people were included, and researchers measured average household water use before and after the plan. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, utilities, d3

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-089 | Level 3 | Answer C

Prompt. Sam wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. A report measured missing-camera-footage reports after the change but did not say what it was before the plan. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Similar groups were randomly assigned to use or not use the plan, then missing-camera-footage reports was measured. correct	**D.** Sam's friend says the idea feels promising but gives no data about missing-camera-footage reports. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, governance, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-090 | Level 3 | Answer D

Prompt. Avery wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A report measured phone calls asking ballot status after the change but did not say what it was before the plan. choice	**B.** Avery's friend says the idea feels promising but gives no data about phone calls asking ballot status. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Outside researchers checked phone calls asking ballot status before and after the plan using a consistent method. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, election administration, d3

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-091 | Level 3 | Answer A

Prompt. Taylor wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Multiple similar settings tracked vocabulary retention quiz scores using the same method after trying the plan. correct	**B.** A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan. choice
C. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, learning, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-092 | Level 3 | Answer B

Prompt. Morgan wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups. choice	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to new-member cancellations. correct
C. Morgan's friend says the idea feels promising but gives no data about new-member cancellations. choice	**D.** A report measured new-member cancellations after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, fitness, d3

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-093 | Level 3 | Answer C

Prompt. Casey wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A fair before-and-after study used a large sample to track reported minor crashes. correct	**D.** Casey's friend says the idea feels promising but gives no data about reported minor crashes. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, insurance, d3

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-094 | Level 3 | Answer A

Prompt. Jordan wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked reader trust ratings. correct	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups. choice
C. A report measured reader trust ratings after the change but did not say what it was before the plan. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, media, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-095 | Level 3 | Answer B

Prompt. Riley wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The measurement was done by an independent team using the same rules before and after. correct
C. A report measured price disputes after the change but did not say what it was before the plan. choice	**D.** Riley's friend says the idea feels promising but gives no data about price disputes. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, local commerce, d3

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-096 | Level 3 | Answer A

Prompt. Maya wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. Results from several similar places were checked with the same measure of noise complaints from guest rooms. correct	**B.** A report measured noise complaints from guest rooms after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Maya's friend says the idea feels promising but gives no data about noise complaints from guest rooms. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, hospitality, d3

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

evidence_quality-097 | Level 4 | Answer D

Prompt. Avery wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Avery's friend says the idea feels promising but gives no data about late-shift commute complaints. choice	**D.** Results from several similar places were checked with the same measure of late-shift commute complaints. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, transportation, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-098 | Level 4 | Answer C

Prompt. Taylor wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups. choice
C. A study write-up included the sample size, method, and results for classroom disruption reports. correct	**D.** Taylor's friend says the idea feels promising but gives no data about classroom disruption reports. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, education, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-099 | Level 4 | Answer B

Prompt. Morgan wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Researchers used a large sample and checked missed-dose reports both before and after the change. correct
C. A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups. choice	**D.** Morgan's friend says the idea feels promising but gives no data about missed-dose reports. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, health, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-100 | Level 4 | Answer A

Prompt. Casey wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment. correct	**B.** A report measured staff resignations after the change but did not say what it was before the plan. choice
C. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups. choice	**D.** Casey's friend says the idea feels promising but gives no data about staff resignations. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, workplace, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-101 | Level 4 | Answer D

Prompt. Jordan wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups. choice	**B.** Jordan's friend says the idea feels promising but gives no data about shopper overpayment complaints. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** The measurement was done by an independent team using the same rules before and after. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, retail, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-102 | Level 4 | Answer C

Prompt. Riley wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan. choice	**B.** A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups. choice
C. Comparable sites each tried the plan and used the same method to track library card renewals. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, public services, d4

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-103 | Level 4 | Answer B

Prompt. Maya wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about admin account takeovers. choice	**B.** The evidence states who was measured, how the comparison worked, and what changed in admin account takeovers. correct
C. A report measured admin account takeovers after the change but did not say what it was before the plan. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, technology, d4

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-104 | Level 4 | Answer A

Prompt. Sam wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. The evidence covers many cases and measures reported thefts on both sides of the change. correct	**B.** Sam's friend says the idea feels promising but gives no data about reported thefts. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, public safety, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-105 | Level 4 | Answer B

Prompt. Avery wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A fair random comparison measured course pass rates in both the plan group and the no-plan group. correct
C. A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups. choice	**D.** Avery's friend says the idea feels promising but gives no data about course pass rates. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, education, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-106 | Level 4 | Answer A

Prompt. Taylor wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. People outside the project collected comparable before-and-after data on dessert orders. correct	**B.** Taylor's friend says the idea feels promising but gives no data about dessert orders. choice
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, nutrition, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-107 | Level 4 | Answer A

Prompt. Morgan wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Several similar settings tried the plan, and each one measured overdraft fees the same way. correct	**B.** A report measured overdraft fees after the change but did not say what it was before the plan. choice
C. Morgan's friend says the idea feels promising but gives no data about overdraft fees. choice	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, finance, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-108 | Level 4 | Answer B

Prompt. Casey wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The study reported its sample size, comparison method, and results for trail crowding complaints. correct
C. A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups. choice	**D.** A report measured trail crowding complaints after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, environment, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-109 | Level 4 | Answer C

Prompt. Jordan wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Jordan's friend says the idea feels promising but gives no data about family visits. choice	**B.** A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups. choice
C. A large, fair study measured family visits before and after the change. correct	**D.** A report measured family visits after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, culture, d4

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-110 | Level 4 | Answer D

Prompt. Riley wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. A report measured repeat head injuries after the change but did not say what it was before the plan. choice	**B.** Riley's friend says the idea feels promising but gives no data about repeat head injuries. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A random test compared similar groups with and without the change, then measured repeat head injuries. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, sports, d4

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-111 | Level 4 | Answer A

Prompt. Maya wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Independent researchers used the same method to measure donor retention before and after the plan. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups. choice	**D.** A report measured donor retention after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, nonprofit, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-112 | Level 4 | Answer B

Prompt. Sam wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups. choice	**B.** The plan was tried in several similar places, with back-injury claims measured consistently in each one. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A report measured back-injury claims after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, workplace safety, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-113 | Level 4 | Answer C

Prompt. Avery wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups. choice	**B.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan. choice
C. The report gave the sample size, comparison method, and measured result for landfill waste from participating buildings. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, environment, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-114 | Level 4 | Answer D

Prompt. Taylor wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Taylor's friend says the idea feels promising but gives no data about publicly visible profiles. choice
C. A report measured publicly visible profiles after the change but did not say what it was before the plan. choice	**D.** Many people were included, and researchers measured publicly visible profiles before and after the plan. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, technology, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-115 | Level 4 | Answer A

Prompt. Morgan wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Similar groups were randomly assigned to use or not use the plan, then patient no-show rates was measured. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Morgan's friend says the idea feels promising but gives no data about patient no-show rates. choice	**D.** A report measured patient no-show rates after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, health, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-116 | Level 4 | Answer B

Prompt. Casey wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A report measured average boarding time after the change but did not say what it was before the plan. choice	**B.** A team not connected to the proposal measured average boarding time with the same method each time. correct
C. Casey's friend says the idea feels promising but gives no data about average boarding time. choice	**D.** A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, travel, d4

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-117 | Level 4 | Answer B

Prompt. Jordan wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Multiple similar settings tracked unresolved repair requests using the same method after trying the plan. correct
C. A report measured unresolved repair requests after the change but did not say what it was before the plan. choice	**D.** A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, housing, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-118 | Level 4 | Answer A

Prompt. Riley wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Researchers listed how many cases were studied, how they compared them, and what happened to fruit purchases. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups. choice	**D.** Riley's friend says the idea feels promising but gives no data about fruit purchases. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, food, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-119 | Level 4 | Answer D

Prompt. Maya wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan. choice	**B.** A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups. choice
C. Maya's friend says the idea feels promising but gives no data about customer complaint rates. choice	**D.** A fair before-and-after study used a large sample to track customer complaint rates. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, customer support, d4

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-120 | Level 4 | Answer C

Prompt. Sam wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups. choice
C. Researchers randomly compared a plan group with a no-plan group and tracked average household water use. correct	**D.** A report measured average household water use after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, utilities, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-121 | Level 4 | Answer B

Prompt. Avery wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups. choice	**B.** Outside researchers checked missing-camera-footage reports before and after the plan using a consistent method. correct
C. Avery's friend says the idea feels promising but gives no data about missing-camera-footage reports. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, governance, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-122 | Level 4 | Answer A

Prompt. Taylor wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. Results from several similar places were checked with the same measure of phone calls asking ballot status. correct	**B.** A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups. choice
C. A report measured phone calls asking ballot status after the change but did not say what it was before the plan. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, election administration, d4

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-123 | Level 4 | Answer D

Prompt. Morgan wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Morgan's friend says the idea feels promising but gives no data about vocabulary retention quiz scores. choice	**D.** A study write-up included the sample size, method, and results for vocabulary retention quiz scores. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, learning, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-124 | Level 4 | Answer C

Prompt. Casey wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured new-member cancellations after the change but did not say what it was before the plan. choice
C. Researchers used a large sample and checked new-member cancellations both before and after the change. correct	**D.** Casey's friend says the idea feels promising but gives no data about new-member cancellations. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, fitness, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-125 | Level 4 | Answer D

Prompt. Jordan wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups. choice	**B.** A report measured reported minor crashes after the change but did not say what it was before the plan. choice
C. Jordan's friend says the idea feels promising but gives no data about reported minor crashes. choice	**D.** The plan was tested against a similar no-plan group chosen by random assignment. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, insurance, d4

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-126 | Level 4 | Answer C

Prompt. Riley wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A report measured reader trust ratings after the change but did not say what it was before the plan. choice	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups. choice
C. The measurement was done by an independent team using the same rules before and after. correct	**D.** Riley's friend says the idea feels promising but gives no data about reader trust ratings. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, media, d4

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-127 | Level 4 | Answer C

Prompt. Maya wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured price disputes after the change but did not say what it was before the plan. choice
C. Comparable sites each tried the plan and used the same method to track price disputes. correct	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, local commerce, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-128 | Level 4 | Answer D

Prompt. Sam wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups. choice
C. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan. choice	**D.** The evidence states who was measured, how the comparison worked, and what changed in noise complaints from guest rooms. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, hospitality, d4

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

evidence_quality-129 | Level 5 | Answer A

Prompt. Taylor wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. The evidence states who was measured, how the comparison worked, and what changed in late-shift commute complaints. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A report measured late-shift commute complaints after the change but did not say what it was before the plan. choice	**D.** A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, transportation, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-130 | Level 5 | Answer B

Prompt. Morgan wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A report measured classroom disruption reports after the change but did not say what it was before the plan. choice	**B.** The evidence covers many cases and measures classroom disruption reports on both sides of the change. correct
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups. choice	**D.** Morgan's friend says the idea feels promising but gives no data about classroom disruption reports. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, education, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-131 | Level 5 | Answer C

Prompt. Casey wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups. choice	**B.** Casey's friend says the idea feels promising but gives no data about missed-dose reports. choice
C. A fair random comparison measured missed-dose reports in both the plan group and the no-plan group. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, health, d5

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-132 | Level 5 | Answer D

Prompt. Jordan wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured staff resignations after the change but did not say what it was before the plan. choice
C. Jordan's friend says the idea feels promising but gives no data about staff resignations. choice	**D.** People outside the project collected comparable before-and-after data on staff resignations. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, workplace, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-133 | Level 5 | Answer A

Prompt. Riley wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Comparable sites each tried the plan and used the same method to track shopper overpayment complaints. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A report measured shopper overpayment complaints after the change but did not say what it was before the plan. choice	**D.** Riley's friend says the idea feels promising but gives no data about shopper overpayment complaints. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, retail, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-134 | Level 5 | Answer B

Prompt. Maya wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan. choice	**B.** The study reported its sample size, comparison method, and results for library card renewals. correct
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** Maya's friend says the idea feels promising but gives no data about library card renewals. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, public services, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-135 | Level 5 | Answer C

Prompt. Sam wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A report measured admin account takeovers after the change but did not say what it was before the plan. choice	**B.** Sam's friend says the idea feels promising but gives no data about admin account takeovers. choice
C. A large, fair study measured admin account takeovers before and after the change. correct	**D.** A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, technology, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-136 | Level 5 | Answer D

Prompt. Avery wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups. choice	**B.** A report measured reported thefts after the change but did not say what it was before the plan. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A random test compared similar groups with and without the change, then measured reported thefts. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, public safety, d5

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-137 | Level 5 | Answer A

Prompt. Taylor wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Independent researchers used the same method to measure course pass rates before and after the plan. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. Taylor's friend says the idea feels promising but gives no data about course pass rates. choice	**D.** A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, education, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-138 | Level 5 | Answer B

Prompt. Morgan wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Several similar settings tried the plan, and each one measured dessert orders the same way. correct
C. Morgan's friend says the idea feels promising but gives no data about dessert orders. choice	**D.** A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, nutrition, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-139 | Level 5 | Answer B

Prompt. Casey wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Casey's friend says the idea feels promising but gives no data about overdraft fees. choice	**B.** The report gave the sample size, comparison method, and measured result for overdraft fees. correct
C. A report measured overdraft fees after the change but did not say what it was before the plan. choice	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, finance, d5

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-140 | Level 5 | Answer A

Prompt. Jordan wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Many people were included, and researchers measured trail crowding complaints before and after the plan. correct	**B.** Jordan's friend says the idea feels promising but gives no data about trail crowding complaints. choice
C. A report measured trail crowding complaints after the change but did not say what it was before the plan. choice	**D.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, environment, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-141 | Level 5 | Answer D

Prompt. Riley wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about family visits. choice	**B.** A report measured family visits after the change but did not say what it was before the plan. choice
C. A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups. choice	**D.** Similar groups were randomly assigned to use or not use the plan, then family visits was measured. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, culture, d5

A feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-142 | Level 5 | Answer C

Prompt. Maya wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. A brochure explains how adding mandatory sideline concussion checks would work but does not measure repeat head injuries or compare groups. choice	**B.** Maya's friend says the idea feels promising but gives no data about repeat head injuries. choice
C. A team not connected to the proposal measured repeat head injuries with the same method each time. correct	**D.** A report measured repeat head injuries after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, sports, d5

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-143 | Level 5 | Answer B

Prompt. Sam wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The plan was tried in several similar places, with donor retention measured consistently in each one. correct
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups. choice	**D.** A report measured donor retention after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, nonprofit, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-144 | Level 5 | Answer A

Prompt. Avery wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Researchers listed how many cases were studied, how they compared them, and what happened to back-injury claims. correct	**B.** A report measured back-injury claims after the change but did not say what it was before the plan. choice
C. A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, workplace safety, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-145 | Level 5 | Answer D

Prompt. Taylor wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A report measured landfill waste from participating buildings after the change but did not say what it was before the plan. choice	**B.** A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups. choice
C. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**D.** A fair before-and-after study used a large sample to track landfill waste from participating buildings. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, environment, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-146 | Level 5 | Answer C

Prompt. Morgan wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Morgan's friend says the idea feels promising but gives no data about publicly visible profiles. choice
C. Researchers randomly compared a plan group with a no-plan group and tracked publicly visible profiles. correct	**D.** A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, technology, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-147 | Level 5 | Answer D

Prompt. Casey wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups. choice
C. Casey's friend says the idea feels promising but gives no data about patient no-show rates. choice	**D.** Outside researchers checked patient no-show rates before and after the plan using a consistent method. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, health, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-148 | Level 5 | Answer C

Prompt. Jordan wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A report measured average boarding time after the change but did not say what it was before the plan. choice	**B.** Jordan's friend says the idea feels promising but gives no data about average boarding time. choice
C. Multiple similar settings tracked average boarding time using the same method after trying the plan. correct	**D.** A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, travel, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-149 | Level 5 | Answer C

Prompt. Riley wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups. choice	**B.** Riley's friend says the idea feels promising but gives no data about unresolved repair requests. choice
C. A study write-up included the sample size, method, and results for unresolved repair requests. correct	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, housing, d5

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-150 | Level 5 | Answer D

Prompt. Maya wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. A report measured fruit purchases after the change but did not say what it was before the plan. choice	**B.** Maya's friend says the idea feels promising but gives no data about fruit purchases. choice
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups. choice	**D.** Researchers used a large sample and checked fruit purchases both before and after the change. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, food, d5

A feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-151 | Level 5 | Answer A

Prompt. Sam wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment. correct	**B.** Sam's friend says the idea feels promising but gives no data about customer complaint rates. choice
C. A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups. choice	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, customer support, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

evidence_quality-152 | Level 5 | Answer B

Prompt. Avery wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The measurement was done by an independent team using the same rules before and after. correct
C. Avery's friend says the idea feels promising but gives no data about average household water use. choice	**D.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, utilities, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-153 | Level 5 | Answer C

Prompt. Taylor wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Taylor's friend says the idea feels promising but gives no data about missing-camera-footage reports. choice
C. Results from several similar places were checked with the same measure of missing-camera-footage reports. correct	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, governance, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-154 | Level 5 | Answer D

Prompt. Morgan wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan. choice
C. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups. choice	**D.** The evidence states who was measured, how the comparison worked, and what changed in phone calls asking ballot status. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, election administration, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-155 | Level 5 | Answer A

Prompt. Casey wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. The evidence covers many cases and measures vocabulary retention quiz scores on both sides of the change. correct	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan. choice	**D.** A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, learning, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-156 | Level 5 | Answer B

Prompt. Jordan wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** A fair random comparison measured new-member cancellations in both the plan group and the no-plan group. correct
C. A report measured new-member cancellations after the change but did not say what it was before the plan. choice	**D.** Jordan's friend says the idea feels promising but gives no data about new-member cancellations. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, random-comparison, fitness, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

evidence_quality-157 | Level 5 | Answer C

Prompt. Riley wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** Riley's friend says the idea feels promising but gives no data about reported minor crashes. choice
C. People outside the project collected comparable before-and-after data on reported minor crashes. correct	**D.** A report measured reported minor crashes after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, independent-team, insurance, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

evidence_quality-158 | Level 5 | Answer D

Prompt. Maya wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups. choice	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported. choice
C. A report measured reader trust ratings after the change but did not say what it was before the plan. choice	**D.** Comparable sites each tried the plan and used the same method to track reader trust ratings. correct

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, repeated-settings, media, d5

A feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

evidence_quality-159 | Level 5 | Answer B

Prompt. Sam wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported. choice	**B.** The study reported its sample size, comparison method, and results for price disputes. correct
C. Sam's friend says the idea feels promising but gives no data about price disputes. choice	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, clear-sample, local commerce, d5

A feedback (Distractor): Not quite. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

evidence_quality-160 | Level 5 | Answer A

Prompt. Avery wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A large, fair study measured noise complaints from guest rooms before and after the change. correct	**B.** A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups. choice
C. Avery's friend says the idea feels promising but gives no data about noise complaints from guest rooms. choice	**D.** A report measured noise complaints from guest rooms after the change but did not say what it was before the plan. choice

Core explanation. The strongest option measures the result in a fair way, often with a comparison group.

Process commentary. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

Tags: evidence_quality, evidence, large-before-after, hospitality, d5

A feedback (Correct): Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B feedback (Distractor): Not quite. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C feedback (Distractor): Not quite. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D feedback (Distractor): Not quite. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Skill 07

Check Source Reliability

Can We Trust the Source?

Judge a source using expertise, motives, method, and openness. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How much trust should we place in this source, and why?
Why it matters	A source can be wrong because it lacks expertise, hides its method, samples badly, or has strong pressure to reach a certain answer. Source checks do not replace evidence checks; they tell us how carefully to treat the evidence.
Conceptual core	Source reliability is not a vibe check. It is a structured judgment about expertise, method, independence, transparency, and track record. Students should learn that a source with a possible interest is not automatically wrong, and a source without an obvious interest is not automatically right. The question is how the source's position affects the weight we should give its claim.
Student method	Ask four questions: Does the source know the topic? Does it show the method? Does it have a reason to tilt the result? Does it include inconvenient information?
Analogy	A source is like a witness. You ask what they saw, how close they were, what they know, and whether they have a reason to shade the story.
Assessment focus	A good answer names the reliability issue precisely: expertise, method, sampling, independence, transparency, or track record.

Teaching Sequence

1. Ask whether the source has relevant knowledge or access.

2. Look for a clear method, sample, and data path.

3. Check whether the source has pressure, incentives, or commitments that could slant judgment.

4. Value sources that show limitations or inconvenient evidence.

Common Confusions To Watch For

1. Students may treat motive as proof of falsehood rather than a reason for caution.

2. Students may trust impressive titles even when the topic is outside the person's expertise.

3. Students may ignore missing methods because the conclusion sounds reasonable.

Teacher Prompts

1. What does this source know, and how would it know?

2. What method is visible?

3. What reason might this source have to leave something out?

Worked Example

Scenario	A company claims its study shows its app improves sleep, but the report does not say how users were selected or how sleep was measured.
Teacher think-aloud	The problem is not just that the company benefits. The missing method makes the claim hard to check, and the source's incentive gives us another reason to ask for transparency.
Student takeaway	Reliability grows when expertise, method, and openness are visible.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. An app seller says its product improves sleep, citing 12 testimonials with no recruitment details or sleep measure. A university team studies the same app: 200 adults are randomly assigned to app or no-app groups, sleep is measured identically, and the complete results and funding are disclosed. No result figures are supplied here; you are judging how checkable the sources are.

What To Do

1. Make a two-row chart, one row per source, with columns for participant selection, measurement, comparison group, and disclosed interests.

2. Write 'not supplied' wherever the scenario lacks a detail; do not invent it.

3. Write two sentences identifying which report is easier to check and why a seller's financial interest is a reason for scrutiny rather than automatic disproof.

Check before reading the answer. Did you compare reporting methods rather than trust the university's name or reject the seller's identity alone?

Model Answer

Seller: selection not supplied; sleep measure not supplied; no comparison group described; sells the app. University: recruitment details not supplied, but random group assignment stated; common sleep measure; app/no-app comparison; funding disclosed. The university report is easier to inspect because it describes methods and a comparison. The seller has an incentive to promote the product, but that incentive alone does not prove its claim false.

Why it is adequate. It distinguishes known details from missing ones and treats incentives and methods as evidence to examine, not shortcuts to a verdict.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

source_reliability-001 | Level 1 | Answer C

Prompt. Riley reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Riley trust the report less?

A. The report names who collected the data. choice	**B.** The author is a transportation expert who has studied similar programs. choice
C. A company that sells services tied to the recommendation helped write the report. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, transportation, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-002 | Level 1 | Answer B

Prompt. Maya reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report does not say how the data was gathered. correct
C. The author is an education expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, education, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-003 | Level 1 | Answer A

Prompt. Sam reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Sam trust the report less?

A. The author has no relevant expertise and cites no one who does. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a health expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, health, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-004 | Level 1 | Answer D

Prompt. Avery reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Avery trust the report less?

A. The author is a workplace expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The report leaves out results that went against its conclusion. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, workplace, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-005 | Level 1 | Answer C

Prompt. Taylor reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The survey only included people who already supported the plan. correct	**D.** The author is a retail expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, retail, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-006 | Level 1 | Answer B

Prompt. Morgan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author works for a firm bidding to run part of the plan. correct
C. The author is a public services expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, public services, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-007 | Level 1 | Answer A

Prompt. Casey reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Casey trust the report less?

A. The report gives results but no sample size, dates, or data source. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a technology expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, technology, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-008 | Level 1 | Answer D

Prompt. Jordan reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Jordan trust the report less?

A. The author is a public safety expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author works outside the topic area and does not quote experts. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, public safety, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-009 | Level 1 | Answer C

Prompt. Riley reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Riley trust the report less?

A. The author is an education expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The author reports only the best month and skips weaker months. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, education, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-010 | Level 1 | Answer B

Prompt. Maya reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Maya trust the report less?

A. The report names who collected the data. choice	**B.** The survey came from a signup list for fans of the proposal. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a nutrition expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, nutrition, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-011 | Level 1 | Answer D

Prompt. Sam reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Sam trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a finance expert who has studied similar programs. choice	**D.** The report was sponsored by a supplier that could be hired if the plan passed. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, finance, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-012 | Level 1 | Answer A

Prompt. Avery reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Avery trust the report less?

A. The report never explains who was surveyed or how they were chosen. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is an environment expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, environment, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-013 | Level 1 | Answer B

Prompt. Taylor reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report is written by a publicity intern with no background in the field. correct
C. The author is a culture expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, culture, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-014 | Level 1 | Answer C

Prompt. Morgan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Morgan trust the report less?

A. The report names who collected the data. choice	**B.** The author is a sports expert who has studied similar programs. choice
C. The report mentions successes but leaves out failed trials of the same plan. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, sports, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-015 | Level 1 | Answer D

Prompt. Casey reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Casey trust the report less?

A. The report names who collected the data. choice	**B.** The author is a nonprofit expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** People who disliked the plan were not invited to answer the survey. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, nonprofit, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-016 | Level 1 | Answer A

Prompt. Jordan reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Jordan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a workplace safety expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, workplace safety, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-017 | Level 1 | Answer B

Prompt. Riley reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Riley trust the report less?

A. The report names who collected the data. choice	**B.** The methods section is missing, so readers cannot check the process. correct
C. The author is an environment expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, environment, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-018 | Level 1 | Answer C

Prompt. Maya reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Maya trust the report less?

A. The author is a technology expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. No expert source is named, even though the report makes technical claims. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, technology, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-019 | Level 1 | Answer D

Prompt. Sam reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Sam trust the report less?

A. The author is a health expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** Several negative results were collected but not included in the summary. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, health, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-020 | Level 1 | Answer A

Prompt. Avery reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Avery trust the report less?

A. The sample was drawn from a meeting organized by supporters of the plan. correct	**B.** The report names who collected the data. choice
C. The author is a travel expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, travel, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-021 | Level 1 | Answer C

Prompt. Taylor reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Taylor trust the report less?

A. The author is a housing expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The publisher sells products connected to the recommendation. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, housing, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-022 | Level 1 | Answer B

Prompt. Morgan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report gives a conclusion but no way to inspect the raw data. correct
C. The author is a food expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, food, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-023 | Level 1 | Answer A

Prompt. Casey reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Casey trust the report less?

A. The author gives no qualifications for judging this kind of plan. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a customer support expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, customer support, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-024 | Level 1 | Answer D

Prompt. Jordan reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Jordan trust the report less?

A. The author is an utilities expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The chart starts after the worst results had already happened. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, utilities, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-025 | Level 1 | Answer C

Prompt. Riley reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Riley trust the report less?

A. The author is a governance expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. Only people who had already benefited from the plan were surveyed. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, governance, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-026 | Level 1 | Answer B

Prompt. Maya reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Maya trust the report less?

A. The report names who collected the data. choice	**B.** The report comes from a group seeking the contract created by the plan. correct
C. The author is an election administration expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, election administration, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-027 | Level 1 | Answer A

Prompt. Sam reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Sam trust the report less?

A. The report does not say how the data was gathered. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a learning expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, learning, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-028 | Level 1 | Answer D

Prompt. Avery reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Avery trust the report less?

A. The author is a fitness expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author has no relevant expertise and cites no one who does. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, fitness, d1

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-029 | Level 1 | Answer C

Prompt. Taylor reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report leaves out results that went against its conclusion. correct	**D.** The author is an insurance expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, insurance, d1

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-030 | Level 1 | Answer B

Prompt. Morgan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The survey only included people who already supported the plan. correct
C. The report names who collected the data. choice	**D.** The author is a media expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, media, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-031 | Level 1 | Answer D

Prompt. Casey reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a local commerce expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** A company that sells services tied to the recommendation helped write the report. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, local commerce, d1

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-032 | Level 1 | Answer A

Prompt. Jordan reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Jordan trust the report less?

A. The report gives results but no sample size, dates, or data source. correct	**B.** The author is a hospitality expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, hospitality, d1

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

source_reliability-033 | Level 2 | Answer C

Prompt. Maya reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a transportation expert who has studied similar programs. choice
C. The report gives results but no sample size, dates, or data source. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, transportation, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-034 | Level 2 | Answer D

Prompt. Sam reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is an education expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The author works outside the topic area and does not quote experts. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, education, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-035 | Level 2 | Answer A

Prompt. Avery reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Avery trust the report less?

A. The author reports only the best month and skips weaker months. correct	**B.** The author is a health expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, health, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-036 | Level 2 | Answer B

Prompt. Taylor reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The survey came from a signup list for fans of the proposal. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a workplace expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, workplace, d2

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-037 | Level 2 | Answer C

Prompt. Morgan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a retail expert who has studied similar programs. choice
C. The author works for a firm bidding to run part of the plan. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, retail, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-038 | Level 2 | Answer D

Prompt. Casey reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a public services expert who has studied similar programs. choice	**D.** The report never explains who was surveyed or how they were chosen. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, public services, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-039 | Level 2 | Answer A

Prompt. Jordan reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Jordan trust the report less?

A. The report is written by a publicity intern with no background in the field. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a technology expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, technology, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-040 | Level 2 | Answer B

Prompt. Riley reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Riley trust the report less?

A. The author is a public safety expert who has studied similar programs. choice	**B.** The report mentions successes but leaves out failed trials of the same plan. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, public safety, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-041 | Level 2 | Answer A

Prompt. Maya reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Maya trust the report less?

A. People who disliked the plan were not invited to answer the survey. correct	**B.** The author is an education expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, education, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-042 | Level 2 | Answer B

Prompt. Sam reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report was sponsored by a supplier that could be hired if the plan passed. correct
C. The report names who collected the data. choice	**D.** The author is a nutrition expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, nutrition, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-043 | Level 2 | Answer D

Prompt. Avery reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Avery trust the report less?

A. The author is a finance expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The methods section is missing, so readers cannot check the process. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, finance, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-044 | Level 2 | Answer B

Prompt. Taylor reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** No expert source is named, even though the report makes technical claims. correct
C. The author is an environment expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, environment, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-045 | Level 2 | Answer D

Prompt. Morgan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a culture expert who has studied similar programs. choice	**D.** Several negative results were collected but not included in the summary. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, culture, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-046 | Level 2 | Answer C

Prompt. Casey reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a sports expert who has studied similar programs. choice
C. The sample was drawn from a meeting organized by supporters of the plan. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, sports, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-047 | Level 2 | Answer B

Prompt. Jordan reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Jordan trust the report less?

A. The report names who collected the data. choice	**B.** A consultant who helped design the plan was paid to evaluate it. correct
C. The author is a nonprofit expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, nonprofit, d2

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-048 | Level 2 | Answer A

Prompt. Riley reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data. correct	**B.** The report names who collected the data. choice
C. The author is a workplace safety expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, workplace safety, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-049 | Level 2 | Answer D

Prompt. Maya reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is an environment expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The author gives no qualifications for judging this kind of plan. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, environment, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-050 | Level 2 | Answer C

Prompt. Sam reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Sam trust the report less?

A. The author is a technology expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The chart starts after the worst results had already happened. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, technology, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-051 | Level 2 | Answer B

Prompt. Avery reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Avery trust the report less?

A. The author is a health expert who has studied similar programs. choice	**B.** Only people who had already benefited from the plan were surveyed. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, health, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-052 | Level 2 | Answer D

Prompt. Taylor reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a travel expert who has studied similar programs. choice	**D.** The publisher sells products connected to the recommendation. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, travel, d2

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-053 | Level 2 | Answer C

Prompt. Morgan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Morgan trust the report less?

A. The author is a housing expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The report does not say how the data was gathered. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, housing, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-054 | Level 2 | Answer A

Prompt. Casey reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Casey trust the report less?

A. The author has no relevant expertise and cites no one who does. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a food expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, food, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-055 | Level 2 | Answer A

Prompt. Jordan reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Jordan trust the report less?

A. The report leaves out results that went against its conclusion. correct	**B.** The report names who collected the data. choice
C. The author is a customer support expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, customer support, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-056 | Level 2 | Answer B

Prompt. Riley reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The survey only included people who already supported the plan. correct
C. The report names who collected the data. choice	**D.** The author is an utilities expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, utilities, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-057 | Level 2 | Answer A

Prompt. Maya reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Maya trust the report less?

A. The report comes from a group seeking the contract created by the plan. correct	**B.** The report names who collected the data. choice
C. The author is a governance expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, governance, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-058 | Level 2 | Answer B

Prompt. Sam reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report gives results but no sample size, dates, or data source. correct
C. The author is an election administration expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, election administration, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-059 | Level 2 | Answer C

Prompt. Avery reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Avery trust the report less?

A. The author is a learning expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The author works outside the topic area and does not quote experts. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, learning, d2

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-060 | Level 2 | Answer D

Prompt. Taylor reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The author is a fitness expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author reports only the best month and skips weaker months. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, fitness, d2

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-061 | Level 2 | Answer A

Prompt. Morgan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Morgan trust the report less?

A. The survey came from a signup list for fans of the proposal. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is an insurance expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, insurance, d2

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-062 | Level 2 | Answer C

Prompt. Casey reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a media expert who has studied similar programs. choice
C. A company that sells services tied to the recommendation helped write the report. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, media, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-063 | Level 2 | Answer D

Prompt. Jordan reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Jordan trust the report less?

A. The report names who collected the data. choice	**B.** The author is a local commerce expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report never explains who was surveyed or how they were chosen. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, local commerce, d2

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-064 | Level 2 | Answer C

Prompt. Riley reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a hospitality expert who has studied similar programs. choice
C. The report is written by a publicity intern with no background in the field. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, hospitality, d2

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

source_reliability-065 | Level 3 | Answer B

Prompt. Sam reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Sam trust the report less?

A. The author is a transportation expert who has studied similar programs. choice	**B.** The report is written by a publicity intern with no background in the field. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, transportation, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-066 | Level 3 | Answer A

Prompt. Avery reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Avery trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan. correct	**B.** The author is an education expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, education, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-067 | Level 3 | Answer D

Prompt. Taylor reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a health expert who has studied similar programs. choice	**D.** People who disliked the plan were not invited to answer the survey. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, health, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-068 | Level 3 | Answer C

Prompt. Morgan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Morgan trust the report less?

A. The author is a workplace expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report was sponsored by a supplier that could be hired if the plan passed. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, workplace, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-069 | Level 3 | Answer B

Prompt. Casey reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Casey trust the report less?

A. The author is a retail expert who has studied similar programs. choice	**B.** The report never explains who was surveyed or how they were chosen. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, retail, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-070 | Level 3 | Answer A

Prompt. Jordan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Jordan trust the report less?

A. No expert source is named, even though the report makes technical claims. correct	**B.** The author is a public services expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, public services, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-071 | Level 3 | Answer D

Prompt. Riley reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a technology expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** Several negative results were collected but not included in the summary. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, technology, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-072 | Level 3 | Answer C

Prompt. Maya reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a public safety expert who has studied similar programs. choice
C. The sample was drawn from a meeting organized by supporters of the plan. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, public safety, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-073 | Level 3 | Answer B

Prompt. Sam reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Sam trust the report less?

A. The author is an education expert who has studied similar programs. choice	**B.** A consultant who helped design the plan was paid to evaluate it. correct
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, education, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-074 | Level 3 | Answer A

Prompt. Avery reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Avery trust the report less?

A. The methods section is missing, so readers cannot check the process. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a nutrition expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, nutrition, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-075 | Level 3 | Answer C

Prompt. Taylor reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Taylor trust the report less?

A. The author is a finance expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author gives no qualifications for judging this kind of plan. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, finance, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-076 | Level 3 | Answer D

Prompt. Morgan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is an environment expert who has studied similar programs. choice	**D.** The chart starts after the worst results had already happened. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, environment, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-077 | Level 3 | Answer A

Prompt. Casey reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Casey trust the report less?

A. Only people who had already benefited from the plan were surveyed. correct	**B.** The author is a culture expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, culture, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-078 | Level 3 | Answer B

Prompt. Jordan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The publisher sells products connected to the recommendation. correct
C. The author is a sports expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, sports, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-079 | Level 3 | Answer A

Prompt. Riley reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data. correct	**B.** The author is a nonprofit expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, nonprofit, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-080 | Level 3 | Answer C

Prompt. Maya reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Maya trust the report less?

A. The report names who collected the data. choice	**B.** The author is a workplace safety expert who has studied similar programs. choice
C. The author has no relevant expertise and cites no one who does. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, workplace safety, d3

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-081 | Level 3 | Answer A

Prompt. Sam reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Sam trust the report less?

A. The report leaves out results that went against its conclusion. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is an environment expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, environment, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-082 | Level 3 | Answer C

Prompt. Avery reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The survey only included people who already supported the plan. correct	**D.** The author is a technology expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, technology, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-083 | Level 3 | Answer A

Prompt. Taylor reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Taylor trust the report less?

A. The report comes from a group seeking the contract created by the plan. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a health expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, health, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-084 | Level 3 | Answer C

Prompt. Morgan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Morgan trust the report less?

A. The report names who collected the data. choice	**B.** The author is a travel expert who has studied similar programs. choice
C. The report does not say how the data was gathered. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, travel, d3

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-085 | Level 3 | Answer D

Prompt. Casey reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Casey trust the report less?

A. The author is a housing expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author works outside the topic area and does not quote experts. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, housing, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-086 | Level 3 | Answer B

Prompt. Jordan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author reports only the best month and skips weaker months. correct
C. The report names who collected the data. choice	**D.** The author is a food expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, food, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-087 | Level 3 | Answer D

Prompt. Riley reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Riley trust the report less?

A. The author is a customer support expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The survey came from a signup list for fans of the proposal. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, customer support, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-088 | Level 3 | Answer C

Prompt. Maya reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. A company that sells services tied to the recommendation helped write the report. correct	**D.** The author is an utilities expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, utilities, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-089 | Level 3 | Answer D

Prompt. Sam reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Sam trust the report less?

A. The author is a governance expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The report gives results but no sample size, dates, or data source. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, governance, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-090 | Level 3 | Answer B

Prompt. Avery reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Avery trust the report less?

A. The report names who collected the data. choice	**B.** The report is written by a publicity intern with no background in the field. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is an election administration expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, election administration, d3

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-091 | Level 3 | Answer D

Prompt. Taylor reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Taylor trust the report less?

A. The author is a learning expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The report mentions successes but leaves out failed trials of the same plan. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, learning, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-092 | Level 3 | Answer B

Prompt. Morgan reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Morgan trust the report less?

A. The report names who collected the data. choice	**B.** People who disliked the plan were not invited to answer the survey. correct
C. The author is a fitness expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, fitness, d3

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-093 | Level 3 | Answer B

Prompt. Casey reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author works for a firm bidding to run part of the plan. correct
C. The report names who collected the data. choice	**D.** The author is an insurance expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, insurance, d3

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-094 | Level 3 | Answer A

Prompt. Jordan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Jordan trust the report less?

A. The report never explains who was surveyed or how they were chosen. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a media expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, media, d3

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-095 | Level 3 | Answer C

Prompt. Riley reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Riley trust the report less?

A. The report names who collected the data. choice	**B.** The author is a local commerce expert who has studied similar programs. choice
C. No expert source is named, even though the report makes technical claims. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, local commerce, d3

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-096 | Level 3 | Answer D

Prompt. Maya reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Maya trust the report less?

A. The author is a hospitality expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** Several negative results were collected but not included in the summary. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, hospitality, d3

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

source_reliability-097 | Level 4 | Answer C

Prompt. Avery reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. Several negative results were collected but not included in the summary. correct	**D.** The author is a transportation expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, transportation, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-098 | Level 4 | Answer D

Prompt. Taylor reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is an education expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The sample was drawn from a meeting organized by supporters of the plan. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, education, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-099 | Level 4 | Answer A

Prompt. Morgan reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Morgan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it. correct	**B.** The author is a health expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, health, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-100 | Level 4 | Answer B

Prompt. Casey reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The methods section is missing, so readers cannot check the process. correct
C. The report names who collected the data. choice	**D.** The author is a workplace expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, workplace, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-101 | Level 4 | Answer C

Prompt. Jordan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a retail expert who has studied similar programs. choice
C. No expert source is named, even though the report makes technical claims. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, retail, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-102 | Level 4 | Answer D

Prompt. Riley reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Riley trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a public services expert who has studied similar programs. choice	**D.** The chart starts after the worst results had already happened. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, public services, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-103 | Level 4 | Answer A

Prompt. Maya reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Maya trust the report less?

A. Only people who had already benefited from the plan were surveyed. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a technology expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, technology, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-104 | Level 4 | Answer B

Prompt. Sam reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Sam trust the report less?

A. The report names who collected the data. choice	**B.** The publisher sells products connected to the recommendation. correct
C. The author is a public safety expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, public safety, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-105 | Level 4 | Answer C

Prompt. Avery reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Avery trust the report less?

A. The report names who collected the data. choice	**B.** The author is an education expert who has studied similar programs. choice
C. The report gives a conclusion but no way to inspect the raw data. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, education, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-106 | Level 4 | Answer D

Prompt. Taylor reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The author is a nutrition expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author gives no qualifications for judging this kind of plan. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, nutrition, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-107 | Level 4 | Answer B

Prompt. Morgan reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Morgan trust the report less?

A. The author is a finance expert who has studied similar programs. choice	**B.** The report leaves out results that went against its conclusion. correct
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, finance, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-108 | Level 4 | Answer A

Prompt. Casey reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Casey trust the report less?

A. The survey only included people who already supported the plan. correct	**B.** The author is an environment expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, environment, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-109 | Level 4 | Answer D

Prompt. Jordan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Jordan trust the report less?

A. The author is a culture expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The report comes from a group seeking the contract created by the plan. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, culture, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-110 | Level 4 | Answer C

Prompt. Riley reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Riley trust the report less?

A. The author is a sports expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The report does not say how the data was gathered. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, sports, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-111 | Level 4 | Answer B

Prompt. Maya reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Maya trust the report less?

A. The author is a nonprofit expert who has studied similar programs. choice	**B.** The author has no relevant expertise and cites no one who does. correct
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, nonprofit, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-112 | Level 4 | Answer A

Prompt. Sam reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Sam trust the report less?

A. The author reports only the best month and skips weaker months. correct	**B.** The author is a workplace safety expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, workplace safety, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-113 | Level 4 | Answer D

Prompt. Avery reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is an environment expert who has studied similar programs. choice	**D.** The survey came from a signup list for fans of the proposal. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, environment, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-114 | Level 4 | Answer C

Prompt. Taylor reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. A company that sells services tied to the recommendation helped write the report. correct	**D.** The author is a technology expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, technology, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-115 | Level 4 | Answer D

Prompt. Morgan reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a health expert who has studied similar programs. choice	**D.** The report gives results but no sample size, dates, or data source. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, health, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-116 | Level 4 | Answer C

Prompt. Casey reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Casey trust the report less?

A. The author is a travel expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The author works outside the topic area and does not quote experts. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, travel, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-117 | Level 4 | Answer A

Prompt. Jordan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Jordan trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan. correct	**B.** The report names who collected the data. choice
C. The author is a housing expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, housing, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-118 | Level 4 | Answer B

Prompt. Riley reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** People who disliked the plan were not invited to answer the survey. correct
C. The author is a food expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, food, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-119 | Level 4 | Answer C

Prompt. Maya reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author works for a firm bidding to run part of the plan. correct	**D.** The author is a customer support expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, customer support, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-120 | Level 4 | Answer D

Prompt. Sam reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is an utilities expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report never explains who was surveyed or how they were chosen. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, utilities, d4

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-121 | Level 4 | Answer A

Prompt. Avery reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Avery trust the report less?

A. The report is written by a publicity intern with no background in the field. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a governance expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, governance, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-122 | Level 4 | Answer B

Prompt. Taylor reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Taylor trust the report less?

A. The author is an election administration expert who has studied similar programs. choice	**B.** Several negative results were collected but not included in the summary. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, election administration, d4

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-123 | Level 4 | Answer C

Prompt. Morgan reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Morgan trust the report less?

A. The report names who collected the data. choice	**B.** The author is a learning expert who has studied similar programs. choice
C. The sample was drawn from a meeting organized by supporters of the plan. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, learning, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-124 | Level 4 | Answer D

Prompt. Casey reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Casey trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a fitness expert who has studied similar programs. choice	**D.** The report was sponsored by a supplier that could be hired if the plan passed. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, fitness, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-125 | Level 4 | Answer A

Prompt. Jordan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Jordan trust the report less?

A. The methods section is missing, so readers cannot check the process. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is an insurance expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, insurance, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-126 | Level 4 | Answer B

Prompt. Riley reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Riley trust the report less?

A. The report names who collected the data. choice	**B.** No expert source is named, even though the report makes technical claims. correct
C. The author is a media expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, media, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-127 | Level 4 | Answer B

Prompt. Maya reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Maya trust the report less?

A. The report names who collected the data. choice	**B.** The chart starts after the worst results had already happened. correct
C. The author is a local commerce expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, local commerce, d4

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-128 | Level 4 | Answer A

Prompt. Sam reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Sam trust the report less?

A. Only people who had already benefited from the plan were surveyed. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a hospitality expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, hospitality, d4

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

source_reliability-129 | Level 5 | Answer D

Prompt. Taylor reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The author is a transportation expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** Only people who had already benefited from the plan were surveyed. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, transportation, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-130 | Level 5 | Answer C

Prompt. Morgan reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Morgan trust the report less?

A. The author is an education expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The publisher sells products connected to the recommendation. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, education, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-131 | Level 5 | Answer B

Prompt. Casey reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Casey trust the report less?

A. The report names who collected the data. choice	**B.** The report gives a conclusion but no way to inspect the raw data. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a health expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, health, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-132 | Level 5 | Answer A

Prompt. Jordan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Jordan trust the report less?

A. The author gives no qualifications for judging this kind of plan. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author is a workplace expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, workplace, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-133 | Level 5 | Answer D

Prompt. Riley reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The author is a retail expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The chart starts after the worst results had already happened. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, retail, d5

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-134 | Level 5 | Answer C

Prompt. Maya reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Maya trust the report less?

A. The author is a public services expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The survey only included people who already supported the plan. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, public services, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-135 | Level 5 | Answer B

Prompt. Sam reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Sam trust the report less?

A. The report names who collected the data. choice	**B.** The report comes from a group seeking the contract created by the plan. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a technology expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, technology, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-136 | Level 5 | Answer A

Prompt. Avery reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Avery trust the report less?

A. The report does not say how the data was gathered. correct	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is a public safety expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, public safety, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-137 | Level 5 | Answer B

Prompt. Taylor reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Taylor trust the report less?

A. The report names who collected the data. choice	**B.** The author has no relevant expertise and cites no one who does. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The author is an education expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, education, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-138 | Level 5 | Answer A

Prompt. Morgan reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Morgan trust the report less?

A. The report leaves out results that went against its conclusion. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a nutrition expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, nutrition, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-139 | Level 5 | Answer C

Prompt. Casey reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Casey trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The survey came from a signup list for fans of the proposal. correct	**D.** The author is a finance expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, finance, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-140 | Level 5 | Answer D

Prompt. Jordan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Jordan trust the report less?

A. The author is an environment expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** A company that sells services tied to the recommendation helped write the report. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, environment, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-141 | Level 5 | Answer A

Prompt. Riley reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Riley trust the report less?

A. The report gives results but no sample size, dates, or data source. correct	**B.** The author is a culture expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, missing-method, culture, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-142 | Level 5 | Answer B

Prompt. Maya reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Maya trust the report less?

A. The report names who collected the data. choice	**B.** The author works outside the topic area and does not quote experts. correct
C. The author is a sports expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, sports, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-143 | Level 5 | Answer C

Prompt. Sam reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Sam trust the report less?

A. The author is a nonprofit expert who has studied similar programs. choice	**B.** The report names who collected the data. choice
C. The author reports only the best month and skips weaker months. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, nonprofit, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-144 | Level 5 | Answer D

Prompt. Avery reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Avery trust the report less?

A. The author is a workplace safety expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** People who disliked the plan were not invited to answer the survey. correct

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, workplace safety, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

source_reliability-145 | Level 5 | Answer A

Prompt. Taylor reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Taylor trust the report less?

A. The author works for a firm bidding to run part of the plan. correct	**B.** The author is an environment expert who has studied similar programs. choice
C. The report names who collected the data. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.
