A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-146 | Level 5 | Answer B

Prompt. Morgan reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report never explains who was surveyed or how they were chosen. correct
C. The author is a technology expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, missing-method, technology, d5

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-147 | Level 5 | Answer C

Prompt. Casey reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Casey trust the report less?

A. The report names who collected the data. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report is written by a publicity intern with no background in the field. correct	**D.** The author is a health expert who has studied similar programs. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, health, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

source_reliability-148 | Level 5 | Answer D

Prompt. Jordan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a travel expert who has studied similar programs. choice	**D.** The report mentions successes but leaves out failed trials of the same plan. correct

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, travel, d5

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

source_reliability-149 | Level 5 | Answer B

Prompt. Riley reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Riley trust the report less?

A. The author is a housing expert who has studied similar programs. choice	**B.** The sample was drawn from a meeting organized by supporters of the plan. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, housing, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-150 | Level 5 | Answer A

Prompt. Maya reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Maya trust the report less?

A. The report was sponsored by a supplier that could be hired if the plan passed. correct	**B.** The author is a food expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, food, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-151 | Level 5 | Answer D

Prompt. Sam reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Sam trust the report less?

A. The report names who collected the data. choice	**B.** The author is a customer support expert who has studied similar programs. choice
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The methods section is missing, so readers cannot check the process. correct

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, missing-method, customer support, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

source_reliability-152 | Level 5 | Answer C

Prompt. Avery reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Avery trust the report less?

A. The report names who collected the data. choice	**B.** The author is an utilities expert who has studied similar programs. choice
C. No expert source is named, even though the report makes technical claims. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, utilities, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-153 | Level 5 | Answer B

Prompt. Taylor reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Taylor trust the report less?

A. The author is a governance expert who has studied similar programs. choice	**B.** Several negative results were collected but not included in the summary. correct
C. The report lists where the data came from and includes results that do not favor the author. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, governance, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-154 | Level 5 | Answer A

Prompt. Morgan reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Morgan trust the report less?

A. Only people who had already benefited from the plan were surveyed. correct	**B.** The report names who collected the data. choice
C. The author is an election administration expert who has studied similar programs. choice	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, election administration, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-155 | Level 5 | Answer D

Prompt. Casey reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The report names who collected the data. choice
C. The author is a learning expert who has studied similar programs. choice	**D.** A consultant who helped design the plan was paid to evaluate it. correct

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, learning, d5

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

source_reliability-156 | Level 5 | Answer C

Prompt. Jordan reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Jordan trust the report less?

A. The report names who collected the data. choice	**B.** The author is a fitness expert who has studied similar programs. choice
C. The report gives a conclusion but no way to inspect the raw data. correct	**D.** The report lists where the data came from and includes results that do not favor the author. choice

Core explanation. A source is less trustworthy when readers cannot check its method.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, missing-method, fitness, d5

A feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

source_reliability-157 | Level 5 | Answer D

Prompt. Riley reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Riley trust the report less?

A. The author is an insurance expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The report names who collected the data. choice	**D.** The author gives no qualifications for judging this kind of plan. correct

Core explanation. A source is less trustworthy when it lacks expertise on the topic.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

Tags: source_reliability, source, no-expertise, insurance, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

source_reliability-158 | Level 5 | Answer C

Prompt. Maya reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Maya trust the report less?

A. The author is a media expert who has studied similar programs. choice	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The chart starts after the worst results had already happened. correct	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it hides inconvenient evidence.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

Tags: source_reliability, source, cherry-picked, media, d5

A feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-159 | Level 5 | Answer A

Prompt. Sam reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Sam trust the report less?

A. The survey only included people who already supported the plan. correct	**B.** The report lists where the data came from and includes results that do not favor the author. choice
C. The author is a local commerce expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when its sample is tilted toward one answer.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

Tags: source_reliability, source, biased-sample, local commerce, d5

A feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

source_reliability-160 | Level 5 | Answer B

Prompt. Avery reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author. choice	**B.** The publisher sells products connected to the recommendation. correct
C. The author is a hospitality expert who has studied similar programs. choice	**D.** The report names who collected the data. choice

Core explanation. A source is less trustworthy when it may profit from the answer it gives.

Process commentary. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

Tags: source_reliability, source, profit-motive, hospitality, d5

A feedback (Distractor): Not quite. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B feedback (Correct): Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C feedback (Distractor): Not quite. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D feedback (Distractor): Not quite. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Skill 08

Detect Logical Gaps

Does the Logic Follow?

Find the step that does not follow. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Does the conclusion really follow from the evidence?
Why it matters	A logical gap appears when the conclusion reaches farther than the evidence. The facts may be true, the source may be decent, and the wording may be clear, yet the argument still may not follow.
Conceptual core	Logical gaps occur when the evidence is asked to do more than it can do. Students should learn to compare the exact scope of the evidence with the exact scope of the conclusion. Gaps often involve quantity, time, group, certainty, causation, or universality. This skill is not about whether the conclusion is false; it is about whether this argument has earned it.
Student method	Compare what the evidence says with what the conclusion adds. Watch for jumps from some to all, average to every person, possible to certain, or before-after to caused-by.
Analogy	Logic is a staircase. A gap is a missing step; you may see the upper floor, but you cannot simply pretend the step is there.
Assessment focus	A good answer identifies the precise leap from evidence to conclusion rather than attacking the topic generally.

Teaching Sequence

1. State what the evidence actually shows in one careful sentence.

2. State what the conclusion adds.

3. Look for jumps from some to all, possible to certain, short term to long term, or one group to another.

4. Choose the answer that names the unsupported jump.

Common Confusions To Watch For

1. Students may reject a conclusion because they dislike it rather than because it fails to follow.

2. Students may accept a conclusion because the evidence is true.

3. Students may overlook small words like all, always, only, or proves.

Teacher Prompts

1. What does the evidence show only?

2. What extra thing does the conclusion claim?

3. Which word makes the conclusion stronger than the evidence?

Worked Example

Scenario	A survey finds that most students in one art class liked a new grading rubric, so the school says every student will prefer it.
Teacher think-aloud	The evidence is about one class and most students in that class. The conclusion expands to every student in the school. That group and certainty jump is the gap.
Student takeaway	True evidence can still be too narrow for the conclusion.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. Eighteen of 24 students in one art class say they prefer a new grading rubric. The principal announces, 'Every student in our 600-student school prefers it.' No other students were asked.

What To Do

1. Complete: 'The evidence covers ___, but the conclusion covers ___.'

2. Rewrite the conclusion as one sentence that the survey actually supports.

3. Name one additional kind of evidence needed before making a claim about school-wide preferences.

Check before reading the answer. Does your rewrite preserve both the actual sample and the fact that six surveyed students did not prefer the rubric?

Model Answer

The evidence covers 24 students in one art class, but the conclusion covers all 600 students. A majority of the surveyed art class, 18 of 24 students, preferred the new rubric. A school-wide estimate would need a representative sample across classes; even that would not justify saying every student agrees.

Why it is adequate. It narrows the claim to the evidence and separates a statement about a majority from a statement about everyone.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

logical_gaps-001 | Level 1 | Answer A

Prompt. In a memo about evening bus service for late-shift workers, Riley writes, "During a small trial of extending evening bus service until midnight, late-shift commute complaints fell by 22% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes. correct	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, transportation, d1, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-002 | Level 1 | Answer B

Prompt. Maya says, "Most ninth-grade students asked in a survey liked requiring phone lockers during class. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim moves from what most surveyed people liked to what everyone will benefit from. correct
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** The claim talks about benefit, so the next step would be to define what benefit means. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d1, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-003 | Level 1 | Answer C

Prompt. A report says the average result improved after sending medication reminder texts before evening doses. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The average change is used as proof that every individual changed the same way. correct	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-004 | Level 1 | Answer D

Prompt. At a planning meeting about a four-day workweek test for software engineers, Avery says, "In one group that tried testing a Monday-through-Thursday workweek, staff resignations fell by 15% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument uses one example, which can be a helpful starting point for discussion. choice
C. The argument gives the result before stating the recommendation. choice	**D.** The argument generalizes from one case to every case without enough support. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-005 | Level 1 | Answer A

Prompt. In a memo about larger grocery unit-price labels, Taylor writes, "During a small trial of adding larger unit-price labels on shelf tags, shopper overpayment complaints fell by 27% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. A before-and-after change is used as proof of cause without more evidence. correct	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, retail, d1, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-006 | Level 1 | Answer B

Prompt. Morgan says, "Most families checking out children's books asked in a survey liked waiving late fines for children's books. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** Most survey approval is used as proof that every affected person will be helped. correct
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, public services, d1, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-007 | Level 1 | Answer C

Prompt. A report says the average result improved after requiring two-factor login for site administrators. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The group average is assumed to show what happened to each individual person. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-008 | Level 1 | Answer D

Prompt. At a planning meeting about brighter streetlights on Maple Street, Jordan says, "In one group that tried adding brighter LED streetlights on Maple Street, reported thefts fell by 12% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** One successful example is used as if it proves the result will happen everywhere. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, public safety, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-009 | Level 1 | Answer C

Prompt. In a memo about peer tutoring for first-year statistics students, Riley writes, "During a small trial of expanding peer tutoring in statistics, course pass rates rose by 11% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The action is assumed to be the cause just because the change came after it. correct	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d1, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-010 | Level 1 | Answer D

Prompt. Maya says, "Most lunch customers asked in a survey liked showing calorie labels on printed lunch menus. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** Liking the plan is treated as proof that the plan benefits every person affected. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, nutrition, d1, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-011 | Level 1 | Answer B

Prompt. A report says the average result improved after sending overdraft warning texts before fees post. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The reasoning stretches an average improvement into the claim that everyone improved. correct
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, finance, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-012 | Level 1 | Answer D

Prompt. At a planning meeting about timed-entry passes for weekend park trails, Avery says, "In one group that tried using timed-entry passes for weekend trail visits, trail crowding complaints fell by 33% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument uses one example, which can be a helpful starting point for discussion. choice
C. The argument gives the result before stating the recommendation. choice	**D.** One group improved, but that does not show all similar settings will improve too. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-013 | Level 1 | Answer B

Prompt. In a memo about free Friday museum admission, Taylor writes, "During a small trial of offering free admission on Fridays, family visits rose by 29% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The reasoning moves from sequence to cause without checking what else changed. correct
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, culture, d1, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-014 | Level 1 | Answer A

Prompt. Morgan says, "Most youth soccer players asked in a survey liked adding mandatory sideline concussion checks. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. A survey of most people is assumed to show that every person will benefit. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, sports, d1, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-015 | Level 1 | Answer D

Prompt. A report says the average result improved after sending donation receipts within one day. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** A group-level result is read as if it proves the same result for every person. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, nonprofit, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-016 | Level 1 | Answer C

Prompt. At a planning meeting about warehouse ergonomic training, Jordan says, "In one group that tried offering monthly lifting-safety and ergonomic training, back-injury claims fell by 20% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. One test is assumed to be enough to show the plan will work in every setting. correct	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace safety, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-017 | Level 1 | Answer B

Prompt. In a memo about apartment-lobby compost bins, Riley writes, "During a small trial of placing compost bins in apartment lobbies, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** Timing is counted as enough evidence even though another cause could explain the result. correct
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d1, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-018 | Level 1 | Answer A

Prompt. Maya says, "Most new app users asked in a survey liked making new user profiles private by default. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. People liking the plan is confused with evidence that the plan helps everyone. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d1, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-019 | Level 1 | Answer D

Prompt. A report says the average result improved after reserving same-day appointment slots. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** Some people may not improve even when the average does, and the argument misses that. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-020 | Level 1 | Answer B

Prompt. At a planning meeting about seat-zone airline boarding, Avery says, "In one group that tried boarding passengers by seat zone, average boarding time fell by 9% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** A single success becomes a much broader claim than the evidence supports. correct
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, travel, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-021 | Level 1 | Answer A

Prompt. In a memo about an online apartment repair portal, Taylor writes, "During a small trial of launching an online apartment repair portal, unresolved repair requests fell by 26% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes. correct	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The memo uses a small trial, which may still provide a clue worth checking. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, housing, d1, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-022 | Level 1 | Answer C

Prompt. Morgan says, "Most middle-school students asked in a survey liked moving fruit bowls to the front of the cafeteria line. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim moves from what most surveyed people liked to what everyone will benefit from. correct	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, food, d1, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-023 | Level 1 | Answer C

Prompt. A report says the average result improved after giving support agents weekly script coaching. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The average change is used as proof that every individual changed the same way. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, customer support, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-024 | Level 1 | Answer D

Prompt. At a planning meeting about household water-leak alerts, Jordan says, "In one group that tried sending automatic household water-leak alerts, average household water use fell by 10% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument generalizes from one case to every case without enough support. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, utilities, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-025 | Level 1 | Answer C

Prompt. In a memo about body-camera activation reminders, Riley writes, "During a small trial of sending body-camera activation reminders before patrol shifts, missing-camera-footage reports fell by 35% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. A before-and-after change is used as proof of cause without more evidence. correct	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, governance, d1, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-026 | Level 1 | Answer D

Prompt. Maya says, "Most mail voters asked in a survey liked offering online mail-ballot tracking. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** Most survey approval is used as proof that every affected person will be helped. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, election administration, d1, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-027 | Level 1 | Answer A

Prompt. A report says the average result improved after sending spaced-review prompts for language vocabulary. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The group average is assumed to show what happened to each individual person. correct	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, learning, d1, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-028 | Level 1 | Answer B

Prompt. At a planning meeting about a beginner gym orientation, Avery says, "In one group that tried offering a beginner gym orientation, new-member cancellations fell by 19% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** One successful example is used as if it proves the result will happen everywhere. correct
C. The argument gives the result before stating the recommendation. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, fitness, d1, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-029 | Level 1 | Answer C

Prompt. In a memo about safe-driving feedback for policyholders, Taylor writes, "During a small trial of sending weekly safe-driving feedback, reported minor crashes fell by 8% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The action is assumed to be the cause just because the change came after it. correct	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, insurance, d1, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-030 | Level 1 | Answer A

Prompt. Morgan says, "Most newsletter readers asked in a survey liked placing corrections at the top of articles. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. Liking the plan is treated as proof that the plan benefits every person affected. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, media, d1, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-031 | Level 1 | Answer B

Prompt. A report says the average result improved after requiring clearer price signs at vendor stalls. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The reasoning stretches an average improvement into the claim that everyone improved. correct
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, local commerce, d1, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-032 | Level 1 | Answer A

Prompt. At a planning meeting about hotel quiet-hours text reminders, Jordan says, "In one group that tried sending quiet-hours text reminders to hotel guests, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. One group improved, but that does not show all similar settings will improve too. correct	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, hospitality, d1, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

logical_gaps-033 | Level 2 | Answer D

Prompt. Maya says, "Most late-shift workers asked in a survey liked extending evening bus service until midnight. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** Most survey approval is used as proof that every affected person will be helped. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, transportation, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-034 | Level 2 | Answer C

Prompt. A report says the average result improved after requiring phone lockers during class. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The group average is assumed to show what happened to each individual person. correct	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-035 | Level 2 | Answer B

Prompt. At a planning meeting about medication reminder texts for older patients, Avery says, "In one group that tried sending medication reminder texts before evening doses, missed-dose reports fell by 18% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** One successful example is used as if it proves the result will happen everywhere. correct
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d2, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-036 | Level 2 | Answer A

Prompt. In a memo about a four-day workweek test for software engineers, Taylor writes, "During a small trial of testing a Monday-through-Thursday workweek, staff resignations fell by 15% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. A before-and-after change is used as proof of cause without more evidence. correct	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace, d2, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-037 | Level 2 | Answer D

Prompt. Morgan says, "Most weekly grocery shoppers asked in a survey liked adding larger unit-price labels on shelf tags. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** Liking the plan is treated as proof that the plan benefits every person affected. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, retail, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-038 | Level 2 | Answer C

Prompt. A report says the average result improved after waiving late fines for children's books. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The reasoning stretches an average improvement into the claim that everyone improved. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, public services, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-039 | Level 2 | Answer B

Prompt. At a planning meeting about two-factor login for site administrators, Jordan says, "In one group that tried requiring two-factor login for site administrators, admin account takeovers fell by 44% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** One group improved, but that does not show all similar settings will improve too. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d2, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-040 | Level 2 | Answer A

Prompt. In a memo about brighter streetlights on Maple Street, Riley writes, "During a small trial of adding brighter LED streetlights on Maple Street, reported thefts fell by 12% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The action is assumed to be the cause just because the change came after it. correct	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, public safety, d2, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-041 | Level 2 | Answer D

Prompt. Maya says, "Most first-year statistics students asked in a survey liked expanding peer tutoring in statistics. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** A survey of most people is assumed to show that every person will benefit. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-042 | Level 2 | Answer C

Prompt. A report says the average result improved after showing calorie labels on printed lunch menus. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. A group-level result is read as if it proves the same result for every person. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, nutrition, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-043 | Level 2 | Answer A

Prompt. At a planning meeting about bank overdraft warning texts, Avery says, "In one group that tried sending overdraft warning texts before fees post, overdraft fees fell by 24% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. One test is assumed to be enough to show the plan will work in every setting. correct	**B.** The argument gives the result before stating the recommendation. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, finance, d2, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-044 | Level 2 | Answer B

Prompt. In a memo about timed-entry passes for weekend park trails, Taylor writes, "During a small trial of using timed-entry passes for weekend trail visits, trail crowding complaints fell by 33% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The reasoning moves from sequence to cause without checking what else changed. correct
C. The memo uses a small trial, which may still provide a clue worth checking. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d2, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-045 | Level 2 | Answer C

Prompt. Morgan says, "Most local families asked in a survey liked offering free admission on Fridays. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. People liking the plan is confused with evidence that the plan helps everyone. correct	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, culture, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-046 | Level 2 | Answer D

Prompt. A report says the average result improved after adding mandatory sideline concussion checks. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** Some people may not improve even when the average does, and the argument misses that. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, sports, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-047 | Level 2 | Answer A

Prompt. At a planning meeting about same-day donation receipts, Jordan says, "In one group that tried sending donation receipts within one day, donor retention rose by 14% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. A single success becomes a much broader claim than the evidence supports. correct	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, nonprofit, d2, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-048 | Level 2 | Answer B

Prompt. In a memo about warehouse ergonomic training, Riley writes, "During a small trial of offering monthly lifting-safety and ergonomic training, back-injury claims fell by 20% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** Timing is counted as enough evidence even though another cause could explain the result. correct
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace safety, d2, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-049 | Level 2 | Answer C

Prompt. Maya says, "Most apartment residents asked in a survey liked placing compost bins in apartment lobbies. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The claim moves from what most surveyed people liked to what everyone will benefit from. correct	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-050 | Level 2 | Answer D

Prompt. A report says the average result improved after making new user profiles private by default. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The average change is used as proof that every individual changed the same way. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-051 | Level 2 | Answer A

Prompt. At a planning meeting about same-day clinic appointment slots, Avery says, "In one group that tried reserving same-day appointment slots, patient no-show rates fell by 13% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument generalizes from one case to every case without enough support. correct	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument gives the result before stating the recommendation. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d2, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-052 | Level 2 | Answer B

Prompt. In a memo about seat-zone airline boarding, Taylor writes, "During a small trial of boarding passengers by seat zone, average boarding time fell by 9% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** Timing alone is treated as proof of causation, without ruling out other causes. correct
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, travel, d2, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-053 | Level 2 | Answer D

Prompt. Morgan says, "Most apartment tenants asked in a survey liked launching an online apartment repair portal. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** Most survey approval is used as proof that every affected person will be helped. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, housing, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-054 | Level 2 | Answer C

Prompt. A report says the average result improved after moving fruit bowls to the front of the cafeteria line. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The group average is assumed to show what happened to each individual person. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, food, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-055 | Level 2 | Answer B

Prompt. At a planning meeting about weekly call-center script coaching, Jordan says, "In one group that tried giving support agents weekly script coaching, customer complaint rates fell by 18% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** One successful example is used as if it proves the result will happen everywhere. correct
C. The argument gives the result before stating the recommendation. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, customer support, d2, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-056 | Level 2 | Answer A

Prompt. In a memo about household water-leak alerts, Riley writes, "During a small trial of sending automatic household water-leak alerts, average household water use fell by 10% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. A before-and-after change is used as proof of cause without more evidence. correct	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, utilities, d2, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-057 | Level 2 | Answer D

Prompt. Maya says, "Most patrol officers asked in a survey liked sending body-camera activation reminders before patrol shifts. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** Liking the plan is treated as proof that the plan benefits every person affected. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, governance, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-058 | Level 2 | Answer C

Prompt. A report says the average result improved after offering online mail-ballot tracking. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The reasoning stretches an average improvement into the claim that everyone improved. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, election administration, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-059 | Level 2 | Answer B

Prompt. At a planning meeting about language-learning spaced-review prompts, Avery says, "In one group that tried sending spaced-review prompts for language vocabulary, vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** One group improved, but that does not show all similar settings will improve too. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, learning, d2, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-060 | Level 2 | Answer A

Prompt. In a memo about a beginner gym orientation, Taylor writes, "During a small trial of offering a beginner gym orientation, new-member cancellations fell by 19% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The action is assumed to be the cause just because the change came after it. correct	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, fitness, d2, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-061 | Level 2 | Answer D

Prompt. Morgan says, "Most auto-insurance policyholders asked in a survey liked sending weekly safe-driving feedback. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** A survey of most people is assumed to show that every person will benefit. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, insurance, d2, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-062 | Level 2 | Answer C

Prompt. A report says the average result improved after placing corrections at the top of articles. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. A group-level result is read as if it proves the same result for every person. correct	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, media, d2, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-063 | Level 2 | Answer A

Prompt. At a planning meeting about clearer farmers market price signs, Jordan says, "In one group that tried requiring clearer price signs at vendor stalls, price disputes fell by 28% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. One test is assumed to be enough to show the plan will work in every setting. correct	**B.** The argument uses one example, which can be a helpful starting point for discussion. choice
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, local commerce, d2, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-064 | Level 2 | Answer B

Prompt. In a memo about hotel quiet-hours text reminders, Riley writes, "During a small trial of sending quiet-hours text reminders to hotel guests, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The reasoning moves from sequence to cause without checking what else changed. correct
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, hospitality, d2, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

logical_gaps-065 | Level 3 | Answer C

Prompt. A report says the average result improved after extending evening bus service until midnight. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The reasoning stretches an average improvement into the claim that everyone improved. correct	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, transportation, d3, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-066 | Level 3 | Answer A

Prompt. At a planning meeting about classroom phone lockers, Avery says, "In one group that tried requiring phone lockers during class, classroom disruption reports fell by 31% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. One group improved, but that does not show all similar settings will improve too. correct	**B.** The argument uses one example, which can be a helpful starting point for discussion. choice
C. The argument gives the result before stating the recommendation. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d3, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-067 | Level 3 | Answer C

Prompt. In a memo about medication reminder texts for older patients, Taylor writes, "During a small trial of sending medication reminder texts before evening doses, missed-dose reports fell by 18% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The action is assumed to be the cause just because the change came after it. correct	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-068 | Level 3 | Answer A

Prompt. Morgan says, "Most software engineers asked in a survey liked testing a Monday-through-Thursday workweek. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. Liking the plan is treated as proof that the plan benefits every person affected. correct	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. The argument uses ordinary language rather than technical terms. choice	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace, d3, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-069 | Level 3 | Answer A

Prompt. A report says the average result improved after adding larger unit-price labels on shelf tags. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. A group-level result is read as if it proves the same result for every person. correct	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, retail, d3, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-070 | Level 3 | Answer C

Prompt. At a planning meeting about late fines on children's books, Jordan says, "In one group that tried waiving late fines for children's books, library card renewals rose by 19% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. One test is assumed to be enough to show the plan will work in every setting. correct	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, public services, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-071 | Level 3 | Answer D

Prompt. In a memo about two-factor login for site administrators, Riley writes, "During a small trial of requiring two-factor login for site administrators, admin account takeovers fell by 44% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The reasoning moves from sequence to cause without checking what else changed. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-072 | Level 3 | Answer C

Prompt. Maya says, "Most residents on Maple Street asked in a survey liked adding brighter LED streetlights on Maple Street. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. A survey of most people is assumed to show that every person will benefit. correct	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, public safety, d3, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-073 | Level 3 | Answer A

Prompt. A report says the average result improved after expanding peer tutoring in statistics. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. Some people may not improve even when the average does, and the argument misses that. correct	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d3, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-074 | Level 3 | Answer B

Prompt. At a planning meeting about calorie labels on restaurant menus, Avery says, "In one group that tried showing calorie labels on printed lunch menus, dessert orders fell by 16% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** A single success becomes a much broader claim than the evidence supports. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, nutrition, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-075 | Level 3 | Answer B

Prompt. In a memo about bank overdraft warning texts, Taylor writes, "During a small trial of sending overdraft warning texts before fees post, overdraft fees fell by 24% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** Timing is counted as enough evidence even though another cause could explain the result. correct
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, finance, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-076 | Level 3 | Answer A

Prompt. Morgan says, "Most weekend trail hikers asked in a survey liked using timed-entry passes for weekend trail visits. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. People liking the plan is confused with evidence that the plan helps everyone. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d3, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-077 | Level 3 | Answer D

Prompt. A report says the average result improved after offering free admission on Fridays. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The average change is used as proof that every individual changed the same way. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, culture, d3, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-078 | Level 3 | Answer C

Prompt. At a planning meeting about youth soccer concussion checks, Jordan says, "In one group that tried adding mandatory sideline concussion checks, repeat head injuries fell by 21% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument generalizes from one case to every case without enough support. correct	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, sports, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-079 | Level 3 | Answer B

Prompt. In a memo about same-day donation receipts, Riley writes, "During a small trial of sending donation receipts within one day, donor retention rose by 14% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** Timing alone is treated as proof of causation, without ruling out other causes. correct
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, nonprofit, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-080 | Level 3 | Answer A

Prompt. Maya says, "Most warehouse staff asked in a survey liked offering monthly lifting-safety and ergonomic training. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim moves from what most surveyed people liked to what everyone will benefit from. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The argument uses ordinary language rather than technical terms. choice	**D.** The claim talks about benefit, so the next step would be to define what benefit means. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace safety, d3, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-081 | Level 3 | Answer D

Prompt. A report says the average result improved after placing compost bins in apartment lobbies. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The group average is assumed to show what happened to each individual person. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d3, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-082 | Level 3 | Answer C

Prompt. At a planning meeting about private-by-default app profiles, Avery says, "In one group that tried making new user profiles private by default, publicly visible profiles fell by 48% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. One successful example is used as if it proves the result will happen everywhere. correct	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-083 | Level 3 | Answer D

Prompt. In a memo about same-day clinic appointment slots, Taylor writes, "During a small trial of reserving same-day appointment slots, patient no-show rates fell by 13% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The memo uses a small trial, which may still provide a clue worth checking. choice	**D.** A before-and-after change is used as proof of cause without more evidence. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-084 | Level 3 | Answer C

Prompt. Morgan says, "Most domestic flight passengers asked in a survey liked boarding passengers by seat zone. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. Most survey approval is used as proof that every affected person will be helped. correct	**D.** The claim talks about benefit, so the next step would be to define what benefit means. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, travel, d3, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-085 | Level 3 | Answer A

Prompt. A report says the average result improved after launching an online apartment repair portal. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The reasoning stretches an average improvement into the claim that everyone improved. correct	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, housing, d3, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-086 | Level 3 | Answer B

Prompt. At a planning meeting about fruit placement in a school cafeteria line, Jordan says, "In one group that tried moving fruit bowls to the front of the cafeteria line, fruit purchases rose by 23% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** One group improved, but that does not show all similar settings will improve too. correct
C. The argument gives the result before stating the recommendation. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, food, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-087 | Level 3 | Answer D

Prompt. In a memo about weekly call-center script coaching, Riley writes, "During a small trial of giving support agents weekly script coaching, customer complaint rates fell by 18% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The action is assumed to be the cause just because the change came after it. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, customer support, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-088 | Level 3 | Answer B

Prompt. Maya says, "Most local homeowners asked in a survey liked sending automatic household water-leak alerts. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** Liking the plan is treated as proof that the plan benefits every person affected. correct
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, utilities, d3, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-089 | Level 3 | Answer D

Prompt. A report says the average result improved after sending body-camera activation reminders before patrol shifts. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** A group-level result is read as if it proves the same result for every person. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, governance, d3, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-090 | Level 3 | Answer B

Prompt. At a planning meeting about county mail-ballot tracking, Avery says, "In one group that tried offering online mail-ballot tracking, phone calls asking ballot status fell by 42% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** One test is assumed to be enough to show the plan will work in every setting. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, election administration, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-091 | Level 3 | Answer A

Prompt. In a memo about language-learning spaced-review prompts, Taylor writes, "During a small trial of sending spaced-review prompts for language vocabulary, vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The reasoning moves from sequence to cause without checking what else changed. correct	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The memo uses a small trial, which may still provide a clue worth checking. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, learning, d3, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-092 | Level 3 | Answer D

Prompt. Morgan says, "Most new gym members asked in a survey liked offering a beginner gym orientation. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** A survey of most people is assumed to show that every person will benefit. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, fitness, d3, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-093 | Level 3 | Answer B

Prompt. A report says the average result improved after sending weekly safe-driving feedback. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** Some people may not improve even when the average does, and the argument misses that. correct
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, insurance, d3, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-094 | Level 3 | Answer D

Prompt. At a planning meeting about top-of-article correction boxes, Jordan says, "In one group that tried placing corrections at the top of articles, reader trust ratings rose by 7% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** A single success becomes a much broader claim than the evidence supports. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, media, d3, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-095 | Level 3 | Answer B

Prompt. In a memo about clearer farmers market price signs, Riley writes, "During a small trial of requiring clearer price signs at vendor stalls, price disputes fell by 28% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** Timing is counted as enough evidence even though another cause could explain the result. correct
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, local commerce, d3, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-096 | Level 3 | Answer C

Prompt. Maya says, "Most overnight hotel guests asked in a survey liked sending quiet-hours text reminders to hotel guests. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. People liking the plan is confused with evidence that the plan helps everyone. correct	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, hospitality, d3, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

logical_gaps-097 | Level 4 | Answer D

Prompt. At a planning meeting about evening bus service for late-shift workers, Avery says, "In one group that tried extending evening bus service until midnight, late-shift commute complaints fell by 22% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** One test is assumed to be enough to show the plan will work in every setting. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, transportation, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-098 | Level 4 | Answer C

Prompt. In a memo about classroom phone lockers, Taylor writes, "During a small trial of requiring phone lockers during class, classroom disruption reports fell by 31% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The reasoning moves from sequence to cause without checking what else changed. correct	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-099 | Level 4 | Answer B

Prompt. Morgan says, "Most patients over 60 asked in a survey liked sending medication reminder texts before evening doses. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** A survey of most people is assumed to show that every person will benefit. correct
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d4, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-100 | Level 4 | Answer A

Prompt. A report says the average result improved after testing a Monday-through-Thursday workweek. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. A group-level result is read as if it proves the same result for every person. correct	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace, d4, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-101 | Level 4 | Answer D

Prompt. At a planning meeting about larger grocery unit-price labels, Jordan says, "In one group that tried adding larger unit-price labels on shelf tags, shopper overpayment complaints fell by 27% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument gives the result before stating the recommendation. choice	**D.** A single success becomes a much broader claim than the evidence supports. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, retail, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-102 | Level 4 | Answer C

Prompt. In a memo about late fines on children's books, Riley writes, "During a small trial of waiving late fines for children's books, library card renewals rose by 19% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. Timing is counted as enough evidence even though another cause could explain the result. correct	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, public services, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-103 | Level 4 | Answer B

Prompt. Maya says, "Most site administrators asked in a survey liked requiring two-factor login for site administrators. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** People liking the plan is confused with evidence that the plan helps everyone. correct
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d4, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-104 | Level 4 | Answer A

Prompt. A report says the average result improved after adding brighter LED streetlights on Maple Street. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. Some people may not improve even when the average does, and the argument misses that. correct	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, public safety, d4, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-105 | Level 4 | Answer B

Prompt. At a planning meeting about peer tutoring for first-year statistics students, Avery says, "In one group that tried expanding peer tutoring in statistics, course pass rates rose by 11% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument generalizes from one case to every case without enough support. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-106 | Level 4 | Answer A

Prompt. In a memo about calorie labels on restaurant menus, Taylor writes, "During a small trial of showing calorie labels on printed lunch menus, dessert orders fell by 16% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes. correct	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The memo uses a small trial, which may still provide a clue worth checking. choice	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, nutrition, d4, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-107 | Level 4 | Answer A

Prompt. Morgan says, "Most checking-account customers asked in a survey liked sending overdraft warning texts before fees post. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim moves from what most surveyed people liked to what everyone will benefit from. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, finance, d4, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-108 | Level 4 | Answer B

Prompt. A report says the average result improved after using timed-entry passes for weekend trail visits. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The average change is used as proof that every individual changed the same way. correct
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d4, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-109 | Level 4 | Answer C

Prompt. At a planning meeting about free Friday museum admission, Jordan says, "In one group that tried offering free admission on Fridays, family visits rose by 29% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** The argument gives the result before stating the recommendation. choice
C. One successful example is used as if it proves the result will happen everywhere. correct	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, culture, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-110 | Level 4 | Answer D

Prompt. In a memo about youth soccer concussion checks, Riley writes, "During a small trial of adding mandatory sideline concussion checks, repeat head injuries fell by 21% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** A before-and-after change is used as proof of cause without more evidence. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, sports, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-111 | Level 4 | Answer A

Prompt. Maya says, "Most first-time donors asked in a survey liked sending donation receipts within one day. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. Most survey approval is used as proof that every affected person will be helped. correct	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, nonprofit, d4, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-112 | Level 4 | Answer B

Prompt. A report says the average result improved after offering monthly lifting-safety and ergonomic training. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** The group average is assumed to show what happened to each individual person. correct
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace safety, d4, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-113 | Level 4 | Answer C

Prompt. At a planning meeting about apartment-lobby compost bins, Avery says, "In one group that tried placing compost bins in apartment lobbies, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument uses one example, which can be a helpful starting point for discussion. choice
C. One group improved, but that does not show all similar settings will improve too. correct	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-114 | Level 4 | Answer D

Prompt. In a memo about private-by-default app profiles, Taylor writes, "During a small trial of making new user profiles private by default, publicly visible profiles fell by 48% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The action is assumed to be the cause just because the change came after it. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-115 | Level 4 | Answer C

Prompt. Morgan says, "Most primary-care patients asked in a survey liked reserving same-day appointment slots. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. Liking the plan is treated as proof that the plan benefits every person affected. correct	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d4, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-116 | Level 4 | Answer D

Prompt. A report says the average result improved after boarding passengers by seat zone. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The reasoning stretches an average improvement into the claim that everyone improved. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, travel, d4, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-117 | Level 4 | Answer D

Prompt. At a planning meeting about an online apartment repair portal, Jordan says, "In one group that tried launching an online apartment repair portal, unresolved repair requests fell by 26% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** One test is assumed to be enough to show the plan will work in every setting. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, housing, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-118 | Level 4 | Answer C

Prompt. In a memo about fruit placement in a school cafeteria line, Riley writes, "During a small trial of moving fruit bowls to the front of the cafeteria line, fruit purchases rose by 23% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The reasoning moves from sequence to cause without checking what else changed. correct	**D.** The argument names the action clearly, so the main problem is not unclear wording. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, food, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-119 | Level 4 | Answer B

Prompt. Maya says, "Most support agents asked in a survey liked giving support agents weekly script coaching. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** A survey of most people is assumed to show that every person will benefit. correct
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, customer support, d4, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-120 | Level 4 | Answer A

Prompt. A report says the average result improved after sending automatic household water-leak alerts. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. A group-level result is read as if it proves the same result for every person. correct	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, utilities, d4, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-121 | Level 4 | Answer D

Prompt. At a planning meeting about body-camera activation reminders, Avery says, "In one group that tried sending body-camera activation reminders before patrol shifts, missing-camera-footage reports fell by 35% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** A single success becomes a much broader claim than the evidence supports. correct

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, governance, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-122 | Level 4 | Answer C

Prompt. In a memo about county mail-ballot tracking, Taylor writes, "During a small trial of offering online mail-ballot tracking, phone calls asking ballot status fell by 42% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. Timing is counted as enough evidence even though another cause could explain the result. correct	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, election administration, d4, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-123 | Level 4 | Answer A

Prompt. Morgan says, "Most language learners asked in a survey liked sending spaced-review prompts for language vocabulary. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. People liking the plan is confused with evidence that the plan helps everyone. correct	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, learning, d4, pattern-2

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-124 | Level 4 | Answer C

Prompt. A report says the average result improved after offering a beginner gym orientation. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. Some people may not improve even when the average does, and the argument misses that. correct	**D.** The argument talks about a group, so individual stories may still be relevant later. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, fitness, d4, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-125 | Level 4 | Answer B

Prompt. At a planning meeting about safe-driving feedback for policyholders, Jordan says, "In one group that tried sending weekly safe-driving feedback, reported minor crashes fell by 8% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument generalizes from one case to every case without enough support. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, insurance, d4, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-126 | Level 4 | Answer A

Prompt. In a memo about top-of-article correction boxes, Riley writes, "During a small trial of placing corrections at the top of articles, reader trust ratings rose by 7% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes. correct	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The evidence comes before the conclusion, which is a normal way to present an argument. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, media, d4, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-127 | Level 4 | Answer D

Prompt. Maya says, "Most weekend farmers market shoppers asked in a survey liked requiring clearer price signs at vendor stalls. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The argument uses ordinary language rather than technical terms. choice	**D.** The claim moves from what most surveyed people liked to what everyone will benefit from. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, local commerce, d4, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-128 | Level 4 | Answer B

Prompt. A report says the average result improved after sending quiet-hours text reminders to hotel guests. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The average change is used as proof that every individual changed the same way. correct
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, hospitality, d4, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

logical_gaps-129 | Level 5 | Answer C

Prompt. In a memo about evening bus service for late-shift workers, Taylor writes, "During a small trial of extending evening bus service until midnight, late-shift commute complaints fell by 22% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. Timing is counted as enough evidence even though another cause could explain the result. correct	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, transportation, d5, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-130 | Level 5 | Answer D

Prompt. Morgan says, "Most ninth-grade students asked in a survey liked requiring phone lockers during class. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** People liking the plan is confused with evidence that the plan helps everyone. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-131 | Level 5 | Answer A

Prompt. A report says the average result improved after sending medication reminder texts before evening doses. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. Some people may not improve even when the average does, and the argument misses that. correct	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d5, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-132 | Level 5 | Answer B

Prompt. At a planning meeting about a four-day workweek test for software engineers, Jordan says, "In one group that tried testing a Monday-through-Thursday workweek, staff resignations fell by 15% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** A single success becomes a much broader claim than the evidence supports. correct
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-133 | Level 5 | Answer C

Prompt. In a memo about larger grocery unit-price labels, Riley writes, "During a small trial of adding larger unit-price labels on shelf tags, shopper overpayment complaints fell by 27% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. Timing alone is treated as proof of causation, without ruling out other causes. correct	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, retail, d5, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-134 | Level 5 | Answer D

Prompt. Maya says, "Most families checking out children's books asked in a survey liked waiving late fines for children's books. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. The claim talks about benefit, so the next step would be to define what benefit means. choice	**D.** The claim moves from what most surveyed people liked to what everyone will benefit from. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, public services, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-135 | Level 5 | Answer A

Prompt. A report says the average result improved after requiring two-factor login for site administrators. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The average change is used as proof that every individual changed the same way. correct	**B.** The conclusion comes after the report's result, which is not automatically a mistake. choice
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The report uses an average, which can be a useful summary when read carefully. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d5, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-136 | Level 5 | Answer B

Prompt. At a planning meeting about brighter streetlights on Maple Street, Avery says, "In one group that tried adding brighter LED streetlights on Maple Street, reported thefts fell by 12% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument generalizes from one case to every case without enough support. correct
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, public safety, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-137 | Level 5 | Answer A

Prompt. In a memo about peer tutoring for first-year statistics students, Taylor writes, "During a small trial of expanding peer tutoring in statistics, course pass rates rose by 11% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. A before-and-after change is used as proof of cause without more evidence. correct	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, education, d5, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-138 | Level 5 | Answer B

Prompt. Morgan says, "Most lunch customers asked in a survey liked showing calorie labels on printed lunch menus. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** Most survey approval is used as proof that every affected person will be helped. correct
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** The claim talks about benefit, so the next step would be to define what benefit means. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, nutrition, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-139 | Level 5 | Answer D

Prompt. A report says the average result improved after sending overdraft warning texts before fees post. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The group average is assumed to show what happened to each individual person. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, finance, d5, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-140 | Level 5 | Answer B

Prompt. At a planning meeting about timed-entry passes for weekend park trails, Jordan says, "In one group that tried using timed-entry passes for weekend trail visits, trail crowding complaints fell by 33% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** One successful example is used as if it proves the result will happen everywhere. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-141 | Level 5 | Answer D

Prompt. In a memo about free Friday museum admission, Riley writes, "During a small trial of offering free admission on Fridays, family visits rose by 29% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The action is assumed to be the cause just because the change came after it. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, culture, d5, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-142 | Level 5 | Answer C

Prompt. Maya says, "Most youth soccer players asked in a survey liked adding mandatory sideline concussion checks. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background. choice	**B.** The argument uses ordinary language rather than technical terms. choice
C. Liking the plan is treated as proof that the plan benefits every person affected. correct	**D.** The claim talks about benefit, so the next step would be to define what benefit means. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, sports, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-143 | Level 5 | Answer D

Prompt. A report says the average result improved after sending donation receipts within one day. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake. choice	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The reasoning stretches an average improvement into the claim that everyone improved. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, nonprofit, d5, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-144 | Level 5 | Answer B

Prompt. At a planning meeting about warehouse ergonomic training, Avery says, "In one group that tried offering monthly lifting-safety and ergonomic training, back-injury claims fell by 20% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion. choice	**B.** One group improved, but that does not show all similar settings will improve too. correct
C. The argument gives the result before stating the recommendation. choice	**D.** The argument mentions a measured change, so the number should be checked carefully. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, workplace safety, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-145 | Level 5 | Answer D

Prompt. In a memo about apartment-lobby compost bins, Taylor writes, "During a small trial of placing compost bins in apartment lobbies, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording. choice	**B.** The memo uses a small trial, which may still provide a clue worth checking. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The reasoning moves from sequence to cause without checking what else changed. correct

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, environment, d5, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-146 | Level 5 | Answer B

Prompt. Morgan says, "Most new app users asked in a survey liked making new user profiles private by default. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** A survey of most people is assumed to show that every person will benefit. correct
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, technology, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-147 | Level 5 | Answer B

Prompt. A report says the average result improved after reserving same-day appointment slots. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The report uses an average, which can be a useful summary when read carefully. choice	**B.** A group-level result is read as if it proves the same result for every person. correct
C. The argument talks about a group, so individual stories may still be relevant later. choice	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, health, d5, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-148 | Level 5 | Answer A

Prompt. At a planning meeting about seat-zone airline boarding, Jordan says, "In one group that tried boarding passengers by seat zone, average boarding time fell by 9% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. One test is assumed to be enough to show the plan will work in every setting. correct	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. The argument uses one example, which can be a helpful starting point for discussion. choice	**D.** The argument gives the result before stating the recommendation. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, travel, d5, pattern-0

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-149 | Level 5 | Answer C

Prompt. In a memo about an online apartment repair portal, Riley writes, "During a small trial of launching an online apartment repair portal, unresolved repair requests fell by 26% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. Timing is counted as enough evidence even though another cause could explain the result. correct	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, housing, d5, pattern-1

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-150 | Level 5 | Answer D

Prompt. Maya says, "Most middle-school students asked in a survey liked moving fruit bowls to the front of the cafeteria line. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. The survey gives people a chance to react to the idea, which can be useful background. choice	**D.** People liking the plan is confused with evidence that the plan helps everyone. correct

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, food, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-151 | Level 5 | Answer A

Prompt. A report says the average result improved after giving support agents weekly script coaching. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. Some people may not improve even when the average does, and the argument misses that. correct	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, customer support, d5, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-152 | Level 5 | Answer B

Prompt. At a planning meeting about household water-leak alerts, Avery says, "In one group that tried sending automatic household water-leak alerts, average household water use fell by 10% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** A single success becomes a much broader claim than the evidence supports. correct
C. The argument mentions a measured change, so the number should be checked carefully. choice	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

Tags: logical_gaps, logic, utilities, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-153 | Level 5 | Answer A

Prompt. In a memo about body-camera activation reminders, Taylor writes, "During a small trial of sending body-camera activation reminders before patrol shifts, missing-camera-footage reports fell by 35% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes. correct	**B.** The evidence comes before the conclusion, which is a normal way to present an argument. choice
C. The argument names the action clearly, so the main problem is not unclear wording. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, governance, d5, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-154 | Level 5 | Answer C

Prompt. Morgan says, "Most mail voters asked in a survey liked offering online mail-ballot tracking. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means. choice	**B.** The survey gives people a chance to react to the idea, which can be useful background. choice
C. The claim moves from what most surveyed people liked to what everyone will benefit from. correct	**D.** The argument uses ordinary language rather than technical terms. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, election administration, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-155 | Level 5 | Answer A

Prompt. A report says the average result improved after sending spaced-review prompts for language vocabulary. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The average change is used as proof that every individual changed the same way. correct	**B.** The argument talks about a group, so individual stories may still be relevant later. choice
C. The report uses an average, which can be a useful summary when read carefully. choice	**D.** The conclusion comes after the report's result, which is not automatically a mistake. choice

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, learning, d5, pattern-3

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-156 | Level 5 | Answer C

Prompt. At a planning meeting about a beginner gym orientation, Jordan says, "In one group that tried offering a beginner gym orientation, new-member cancellations fell by 19% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully. choice	**B.** The argument gives the result before stating the recommendation. choice
C. The argument generalizes from one case to every case without enough support. correct	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, fitness, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

logical_gaps-157 | Level 5 | Answer A

Prompt. In a memo about safe-driving feedback for policyholders, Riley writes, "During a small trial of sending weekly safe-driving feedback, reported minor crashes fell by 8% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. A before-and-after change is used as proof of cause without more evidence. correct	**B.** The argument names the action clearly, so the main problem is not unclear wording. choice
C. The evidence comes before the conclusion, which is a normal way to present an argument. choice	**D.** The memo uses a small trial, which may still provide a clue worth checking. choice

Core explanation. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

Tags: logical_gaps, logic, insurance, d5, pattern-1

A feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

logical_gaps-158 | Level 5 | Answer C

Prompt. Maya says, "Most newsletter readers asked in a survey liked placing corrections at the top of articles. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms. choice	**B.** The claim talks about benefit, so the next step would be to define what benefit means. choice
C. Most survey approval is used as proof that every affected person will be helped. correct	**D.** The survey gives people a chance to react to the idea, which can be useful background. choice

Core explanation. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, media, d5, pattern-2

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

logical_gaps-159 | Level 5 | Answer D

Prompt. A report says the average result improved after requiring clearer price signs at vendor stalls. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later. choice	**B.** The report uses an average, which can be a useful summary when read carefully. choice
C. The conclusion comes after the report's result, which is not automatically a mistake. choice	**D.** The group average is assumed to show what happened to each individual person. correct

Core explanation. The logical gap is that an average can go up even when some people do not improve.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

Tags: logical_gaps, logic, local commerce, d5, pattern-3

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

logical_gaps-160 | Level 5 | Answer C

Prompt. At a planning meeting about hotel quiet-hours text reminders, Avery says, "In one group that tried sending quiet-hours text reminders to hotel guests, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation. choice	**B.** The argument mentions a measured change, so the number should be checked carefully. choice
C. One successful example is used as if it proves the result will happen everywhere. correct	**D.** The argument uses one example, which can be a helpful starting point for discussion. choice

Core explanation. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Process commentary. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

Tags: logical_gaps, logic, hospitality, d5, pattern-0

A feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C feedback (Correct): Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D feedback (Distractor): Not quite. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Skill 09

Recognize Common Fallacies

What's the Fallacy?

Match a bad argument to its mistake. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What recognizable bad move does this argument make?
Why it matters	Fallacy labels are useful when they name a precise pattern, not when they are used as insults. The goal is to diagnose the bad move so the discussion can return to the actual issue.
Conceptual core	Fallacy work should improve reasoning, not turn discussion into name-calling. Students should first describe the move in plain language, then attach the label. The label is useful only if it identifies the structure: attacking a person instead of the argument, pretending there are only two options, misrepresenting an opponent, changing the subject, appealing to popularity, or assuming the conclusion.
Student method	Identify the move made by the speaker: attacking the person, reducing options to two, changing the subject, exaggerating an opponent, treating popularity as proof, or assuming what needs proof.
Analogy	A fallacy is a recognizable wrong turn in reasoning. The label is the road sign, but the real skill is seeing the turn.
Assessment focus	A good answer selects the fallacy whose structure matches the scenario and rejects labels that are only topically related.
Resource note	The quiz feedback links fallacy items to corresponding LogFall articles when a direct article match is available.

Teaching Sequence

1. Describe what the speaker does in ordinary language.

2. Match that move to the fallacy label.

3. Use the wrong choices as contrast cases rather than memorized vocabulary.

4. Explain how the argument could return to the real issue.

Common Confusions To Watch For

1. Students may label any bad argument with a familiar fallacy name.

2. Students may confuse a harsh tone with ad hominem when the evidence is still addressed.

3. Students may spot the topic but miss the argumentative move.

Teacher Prompts

1. What move did the speaker make?

2. Did the reply address the claim or dodge it?

3. How would you describe the error without using a fallacy label?

Worked Example

Scenario	A student asks whether a new schedule has evidence behind it. Another student replies, you just hate change and want the school to fail.
Teacher think-aloud	The reply attacks the person's attitude instead of answering the evidence question. That is an ad hominem style move, not a response to the argument.
Student takeaway	Name the pattern only after you can describe the bad reasoning move.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. Maya asks, 'What evidence shows the new timetable improves attendance?' Lee replies, 'You just hate change and want our school to fail.' No attendance results have been supplied.

What To Do

1. State Maya's question in your own words.

2. Explain what Lee discusses instead and why that does not answer the question.

3. Rewrite Lee's reply in two sentences: acknowledge the missing evidence and propose a relevant comparison. Do not invent a successful result.

Check before reading the answer. Have you addressed attendance rather than guessed Maya's motives? A label such as 'personal attack' is optional; explain the error.

Model Answer

Maya asks whether the timetable improves attendance. Lee attacks her motives instead of supplying attendance evidence. Better reply: 'We have not yet shown that attendance improves. We should compare attendance under the new and old schedules while checking other changes, such as transport availability.'

Why it is adequate. It identifies the diversion and replaces it with a relevant, honest response rather than an invented justification.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

fallacies-001 | Level 1 | Answer B

Prompt. During a debate about evening bus service for late-shift workers, Riley asks for one more small test before the city council decides. Avery replies, "Riley wants to block every improvement forever." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, transportation, d1

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches straw man.
Study link: LogFall - False dilemma

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches straw man.
Study link: LogFall - Hasty generalization

fallacies-002 | Level 1 | Answer A

Prompt. During a debate about classroom phone lockers, Maya says, "Either the school board must require phone lockers during class right now, or it does not care about ninth-grade students at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, education, d1

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches false dilemma.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches false dilemma.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches false dilemma.
Study link: LogFall - Red herring

fallacies-003 | Level 1 | Answer D

Prompt. During a debate about medication reminder texts for older patients, Sam rejects Morgan's proposal to send medication reminder texts before evening doses because Morgan once made a budgeting mistake. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, health, d1

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches ad hominem.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-004 | Level 1 | Answer C

Prompt. During a debate about a four-day workweek test for software engineers, Avery says, "If the company agrees to test a Monday-through-Thursday workweek, soon every related rule will fall apart." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, workplace, d1

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches slippery slope.
Study link: LogFall - Argumentum ad populum

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches slippery slope.

Study link: LogFall - Hasty generalization

fallacies-005 | Level 1 | Answer B

Prompt. During a debate about larger grocery unit-price labels, Taylor says the grocery chain should add larger unit-price labels on shelf tags because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, retail, d1

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to popularity.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

fallacies-006 | Level 1 | Answer A

Prompt. During a debate about late fines on children's books, Morgan writes that the library should waive late fines for children's books because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, public services, d1

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches circular reasoning.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches circular reasoning.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches circular reasoning.
Study link: LogFall - False dilemma

fallacies-007 | Level 1 | Answer D

Prompt. During a debate about two-factor login for site administrators, Casey points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, technology, d1

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches hasty generalization.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches hasty generalization.
Study link: LogFall - Slippery slope

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

fallacies-008 | Level 1 | Answer C

Prompt. During a debate about brighter streetlights on Maple Street, Sam asks whether adding brighter LED streetlights on Maple Street would affect reported thefts. Jordan answers by talking about this side detail: the new light poles are made of aluminum. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, public safety, d1

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches red herring.
Study link: LogFall - Hasty generalization

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches red herring.
Study link: LogFall - Argumentum ad populum

fallacies-009 | Level 1 | Answer B

Prompt. During a debate about peer tutoring for first-year statistics students, Riley says the university should not expand peer tutoring in statistics because the old way has been used for many years. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, education, d1

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to tradition.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-010 | Level 1 | Answer A

Prompt. During a debate about calorie labels on restaurant menus, Maya says, "Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, nutrition, d1

A feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-011 | Level 1 | Answer A

Prompt. During a debate about bank overdraft warning texts, Sam asks for one more small test before the bank decides. Morgan replies, "Sam wants to block every improvement forever." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real correct	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, finance, d1

A feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches straw man.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches straw man.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

fallacies-012 | Level 1 | Answer B

Prompt. During a debate about timed-entry passes for weekend park trails, Avery says, "Either the park service must use timed-entry passes for weekend trail visits right now, or it does not care about weekend trail hikers at all." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** False dilemma: pretends two choices are the only realistic options correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, environment, d1

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches false dilemma.
Study link: LogFall - Red herring

B feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches false dilemma.
Study link: LogFall - Argumentum ad populum

fallacies-013 | Level 1 | Answer C

Prompt. During a debate about free Friday museum admission, Taylor rejects Jordan's proposal to offer free admission on Fridays because Jordan once made a budgeting mistake. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Ad hominem: attacks the person rather than answering the argument correct	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, culture, d1

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches ad hominem.
Study link: LogFall - Argumentum ad populum

C feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches ad hominem.
Study link: LogFall - Slippery slope

fallacies-014 | Level 1 | Answer D

Prompt. During a debate about youth soccer concussion checks, Morgan says, "If the sports league agrees to add mandatory sideline concussion checks, soon every related rule will fall apart." Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Slippery slope: predicts a chain reaction without enough support correct

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, sports, d1

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches slippery slope.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

D feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

fallacies-015 | Level 1 | Answer A

Prompt. During a debate about same-day donation receipts, Casey says the nonprofit should send donation receipts within one day because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, nonprofit, d1

A feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to popularity.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to popularity.
Study link: LogFall - Ad hominem

fallacies-016 | Level 1 | Answer B

Prompt. During a debate about warehouse ergonomic training, Jordan writes that the warehouse should offer monthly lifting-safety and ergonomic training because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Circular reasoning: uses the conclusion itself as its main support correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, workplace safety, d1

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.

Study link: LogFall - Argumentum ad populum

B feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches circular reasoning.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-017 | Level 1 | Answer C

Prompt. During a debate about apartment-lobby compost bins, Riley points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Hasty generalization: jumps from little evidence to a broad claim correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, environment, d1

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.
Study link: LogFall - Appeal to tradition

C feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches hasty generalization.
Study link: LogFall - False dilemma

fallacies-018 | Level 1 | Answer D

Prompt. During a debate about private-by-default app profiles, Taylor asks whether making new user profiles private by default would affect publicly visible profiles. Maya answers by talking about this side detail: the privacy screen uses a shield icon. Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Red herring: changes the subject instead of addressing the issue correct

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, technology, d1

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches red herring.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

D feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

---

fallacies-019 | Level 1 | Answer A

Prompt. During a debate about same-day clinic appointment slots, Sam says the clinic should not reserve same-day appointment slots because the old way has been used for many years. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, health, d1

A feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to tradition.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches appeal to tradition.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

---

fallacies-020 | Level 1 | Answer B

Prompt. During a debate about seat-zone airline boarding, Avery says, "Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Post hoc: treats timing as enough proof of cause by itself correct
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, travel, d1

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

B feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches post hoc.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

---

fallacies-021 | Level 1 | Answer B

Prompt. During a debate about an online apartment repair portal, Taylor asks for one more small test before the landlord decides. Jordan replies, "Taylor wants to block every improvement forever." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, housing, d1

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches straw man.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches straw man.
Study link: LogFall - Argumentum ad populum

---

fallacies-022 | Level 1 | Answer A

Prompt. During a debate about fruit placement in a school cafeteria line, Morgan says, "Either the cafeteria must move fruit bowls to the front of the cafeteria line right now, or it does not care about middle-school students at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as

contrast cases.

Tags: fallacies, fallacy, false-dilemma, food, d1

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-023 | Level 1 | Answer D

Prompt. During a debate about weekly call-center script coaching, Casey rejects Maya's proposal to give support agents weekly script coaching because Maya once made a budgeting mistake. Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, customer support, d1

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches ad hominem.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-024 | Level 1 | Answer C

Prompt. During a debate about household water-leak alerts, Jordan says, "If the water utility agrees to send automatic household water-leak alerts, soon every related rule will fall apart." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as

contrast cases.

Tags: fallacies, fallacy, slippery-slope, utilities, d1

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches slippery slope.
Study link: LogFall - Hasty generalization

---

fallacies-025 | Level 1 | Answer B

Prompt. During a debate about body-camera activation reminders, Riley says the police department should send body-camera activation reminders before patrol shifts because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, governance, d1

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to popularity.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to popularity.
Study link: LogFall - Ad hominem

fallacies-026 | Level 1 | Answer A

Prompt. During a debate about county mail-ballot tracking, Maya writes that the election office should offer online mail-ballot tracking because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, election administration, d1

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches circular reasoning.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches circular reasoning.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches circular reasoning.
Study link: LogFall - Straw man argument

fallacies-027 | Level 1 | Answer D

Prompt. During a debate about language-learning spaced-review prompts, Sam points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, learning, d1

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches hasty generalization.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches hasty generalization.
Study link: LogFall - Begging the question

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

fallacies-028 | Level 1 | Answer C

Prompt. During a debate about a beginner gym orientation, Casey asks whether offering a beginner gym orientation would affect new-member cancellations. Avery answers by talking about this side detail: the orientation mats are black. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, fitness, d1

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches red herring.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches red herring.
Study link: LogFall - Straw man argument

fallacies-029 | Level 1 | Answer D

Prompt. During a debate about safe-driving feedback for policyholders, Taylor says the insurer should not send weekly safe-driving feedback because the old way has been used for many years. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Appeal to tradition: treats old habits as proof the claim is right correct

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, insurance, d1

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to tradition.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - Appeal to tradition

fallacies-030 | Level 1 | Answer C

Prompt. During a debate about top-of-article correction boxes, Morgan says, "Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Post hoc: treats timing as enough proof of cause by itself correct	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, media, d1

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches post hoc.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches post hoc.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

fallacies-031 | Level 1 | Answer C

Prompt. During a debate about clearer farmers market price signs, Casey asks for one more small test before the farmers market decides. Maya replies, "Casey wants to block every improvement forever." Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Straw man: misstates a view before attacking it as if it were real correct	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, local commerce, d1

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches straw man.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches straw man.
Study link: LogFall - Slippery slope

fallacies-032 | Level 1 | Answer D

Prompt. During a debate about hotel quiet-hours text reminders, Jordan says, "Either the hotel must send quiet-hours text reminders to hotel guests right now, or it does not care about overnight hotel guests at all." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** False dilemma: pretends two choices are the only realistic options correct

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, hospitality, d1

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches false dilemma.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

fallacies-033 | Level 2 | Answer A

Prompt. During a debate about evening bus service for late-shift workers, Maya says, "Either the city council must extend evening bus service until midnight right now, or it does not care about late-shift workers at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, transportation, d2

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches false dilemma.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

---

fallacies-034 | Level 2 | Answer B

Prompt. During a debate about classroom phone lockers, Sam rejects Morgan's proposal to require phone lockers during class because Morgan once made a budgeting mistake. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Ad hominem: attacks the person rather than answering the argument correct
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, education, d2

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

---

fallacies-035 | Level 2 | Answer C

Prompt. During a debate about medication reminder texts for older patients, Avery says, "If the hospital agrees to send medication reminder texts before evening doses, soon every related rule will fall apart." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, health, d2

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches slippery slope.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

fallacies-036 | Level 2 | Answer D

Prompt. During a debate about a four-day workweek test for software engineers, Taylor says the company should test a Monday-through-Thursday workweek because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct correct

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, workplace, d2

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to popularity.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

fallacies-037 | Level 2 | Answer A

Prompt. During a debate about larger grocery unit-price labels, Morgan writes that the grocery chain should add larger unit-price labels on shelf tags because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, retail, d2

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches circular reasoning.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches circular reasoning.
Study link: LogFall - False dilemma

fallacies-038 | Level 2 | Answer B

Prompt. During a debate about late fines on children's books, Casey points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Hasty generalization: jumps from little evidence to a broad claim correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, public services, d2

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.
Study link: LogFall - Appeal to tradition

B feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches hasty generalization.
Study link: LogFall - Straw man argument

fallacies-039 | Level 2 | Answer C

Prompt. During a debate about two-factor login for site administrators, Sam asks whether requiring two-factor login for site administrators would affect admin account takeovers. Jordan answers by talking about this side detail: the login button changed from green to blue. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, technology, d2

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches red herring.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches red herring.
Study link: LogFall - Straw man argument

fallacies-040 | Level 2 | Answer D

Prompt. During a debate about brighter streetlights on Maple Street, Riley says the neighborhood association should not add brighter LED streetlights on Maple Street because the old way has been used for many years. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Appeal to tradition: treats old habits as proof the claim is right correct

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, public safety, d2

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to tradition.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches appeal to tradition.
Study link: LogFall - Argumentum ad populum

D feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

fallacies-041 | Level 2 | Answer C

Prompt. During a debate about peer tutoring for first-year statistics students, Maya says, "Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Post hoc: treats timing as enough proof of cause by itself correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, education, d2

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

C feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-042 | Level 2 | Answer D

Prompt. During a debate about calorie labels on restaurant menus, Sam asks for one more small test before the restaurant group decides. Morgan replies, "Sam wants to block every improvement forever." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Straw man: misstates a view before attacking it as if it were real correct

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, nutrition, d2

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches straw man.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches straw man.
Study link: LogFall - Argumentum ad populum

D feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

fallacies-043 | Level 2 | Answer B

Prompt. During a debate about bank overdraft warning texts, Avery says, "Either the bank must send overdraft warning texts before fees post right now, or it does not care about checking-account customers at all." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** False dilemma: pretends two choices are the only realistic options correct
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, finance, d2

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches false dilemma.
Study link: LogFall - Red herring

B feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

fallacies-044 | Level 2 | Answer D

Prompt. During a debate about timed-entry passes for weekend park trails, Taylor rejects Jordan's proposal to use timed-entry passes for weekend trail visits because Jordan once made a budgeting mistake. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, environment, d2

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches ad hominem.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches ad hominem.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-045 | Level 2 | Answer B

Prompt. During a debate about free Friday museum admission, Morgan says, "If the museum agrees to offer free admission on Fridays, soon every related rule will fall apart." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Slippery slope: predicts a chain reaction without enough support correct
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, culture, d2

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

B feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches slippery slope.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

fallacies-046 | Level 2 | Answer A

Prompt. During a debate about youth soccer concussion checks, Casey says the sports league should add mandatory sideline concussion checks because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, sports, d2

A feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to popularity.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to popularity.
Study link: LogFall - Ad hominem

fallacies-047 | Level 2 | Answer D

Prompt. During a debate about same-day donation receipts, Jordan writes that the nonprofit should send donation receipts within one day because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Circular reasoning: uses the conclusion itself as its main support correct

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, nonprofit, d2

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches circular reasoning.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches circular reasoning.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches circular reasoning.
Study link: LogFall - Appeal to tradition

D feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

fallacies-048 | Level 2 | Answer C

Prompt. During a debate about warehouse ergonomic training, Riley points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Hasty generalization: jumps from little evidence to a broad claim correct	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, workplace safety, d2

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.

Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

fallacies-049 | Level 2 | Answer B

Prompt. During a debate about apartment-lobby compost bins, Taylor asks whether placing compost bins in apartment lobbies would affect landfill waste from participating buildings. Maya answers by talking about this side detail: the lobby compost bins have foot pedals. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Red herring: changes the subject instead of addressing the issue correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, environment, d2

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches red herring.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches red herring.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches red herring.
Study link: LogFall - Argumentum ad populum

fallacies-050 | Level 2 | Answer A

Prompt. During a debate about private-by-default app profiles, Sam says the app maker should not make new user profiles private by default because the old way has been used for many years. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, technology, d2

A feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to tradition.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.
Study link: LogFall - Slippery slope

fallacies-051 | Level 2 | Answer D

Prompt. During a debate about same-day clinic appointment slots, Avery says, "Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Post hoc: treats timing as enough proof of cause by itself correct

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, health, d2

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches post hoc.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

D feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-052 | Level 2 | Answer B

Prompt. During a debate about seat-zone airline boarding, Taylor asks for one more small test before the airline decides. Jordan replies, "Taylor wants to block every improvement forever." Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, travel, d2

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches straw man.
Study link: LogFall - Hasty generalization

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches straw man.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-053 | Level 2 | Answer A

Prompt. During a debate about an online apartment repair portal, Morgan says, "Either the landlord must launch an online apartment repair portal right now, or it does not care about apartment tenants at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, housing, d2

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches false dilemma.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches false dilemma.
Study link: LogFall - Slippery slope

fallacies-054 | Level 2 | Answer C

Prompt. During a debate about fruit placement in a school cafeteria line, Casey rejects Maya's proposal to move fruit bowls to the front of the cafeteria line because Maya once made a budgeting mistake. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Ad hominem: attacks the person rather than answering the argument correct	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as

contrast cases.

Tags: fallacies, fallacy, ad-hominem, food, d2

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

fallacies-055 | Level 2 | Answer C

Prompt. During a debate about weekly call-center script coaching, Jordan says, "If the call center agrees to give support agents weekly script coaching, soon every related rule will fall apart." Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, customer support, d2

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches slippery slope.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

fallacies-056 | Level 2 | Answer D

Prompt. During a debate about household water-leak alerts, Riley says the water utility should send automatic household water-leak alerts because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct correct

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as

contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, utilities, d2

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to popularity.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to popularity.
Study link: LogFall - Hasty generalization

D feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

---

fallacies-057 | Level 2 | Answer C

Prompt. During a debate about body-camera activation reminders, Maya writes that the police department should send body-camera activation reminders before patrol shifts because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Circular reasoning: uses the conclusion itself as its main support correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, governance, d2

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches circular reasoning.
Study link: LogFall - Slippery slope

C feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches circular reasoning.
Study link: LogFall - Straw man argument

fallacies-058 | Level 2 | Answer D

Prompt. During a debate about county mail-ballot tracking, Sam points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, election administration, d2

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches hasty generalization.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches hasty generalization.
Study link: LogFall - Straw man argument

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

fallacies-059 | Level 2 | Answer A

Prompt. During a debate about language-learning spaced-review prompts, Casey asks whether sending spaced-review prompts for language vocabulary would affect vocabulary retention quiz scores. Avery answers by talking about this side detail: the review prompts use a bell icon. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, learning, d2

A feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches red herring.
Study link: LogFall - False dilemma

fallacies-060 | Level 2 | Answer B

Prompt. During a debate about a beginner gym orientation, Taylor says the gym should not offer a beginner gym orientation because the old way has been used for many years. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, fitness, d2

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.
Study link: LogFall - Hasty generalization

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.
Study link: LogFall - Slippery slope

fallacies-061 | Level 2 | Answer C

Prompt. During a debate about safe-driving feedback for policyholders, Morgan says, "Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Post hoc: treats timing as enough proof of cause by itself correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, insurance, d2

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

C feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.

Study link: LogFall - False dilemma

fallacies-062 | Level 2 | Answer A

Prompt. During a debate about top-of-article correction boxes, Casey asks for one more small test before the newsroom decides. Maya replies, "Casey wants to block every improvement forever." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, media, d2

A feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches straw man.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches straw man.
Study link: LogFall - Hasty generalization

fallacies-063 | Level 2 | Answer B

Prompt. During a debate about clearer farmers market price signs, Jordan says, "Either the farmers market must require clearer price signs at vendor stalls right now, or it does not care about weekend farmers market shoppers at all." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** False dilemma: pretends two choices are the only realistic options correct
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, local commerce, d2

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches false dilemma.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

fallacies-064 | Level 2 | Answer A

Prompt. During a debate about hotel quiet-hours text reminders, Riley rejects Avery's proposal to send quiet-hours text reminders to hotel guests because Avery once made a budgeting mistake. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, hospitality, d2

A feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches ad hominem.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

fallacies-065 | Level 3 | Answer D

Prompt. During a debate about evening bus service for late-shift workers, Sam rejects Morgan's proposal to extend evening bus service until midnight because Morgan once made a budgeting mistake. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, transportation, d3

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches ad hominem.

Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches ad hominem.
Study link: LogFall - Hasty generalization

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-066 | Level 3 | Answer C

Prompt. During a debate about classroom phone lockers, Avery says, "If the school board agrees to require phone lockers during class, soon every related rule will fall apart." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, education, d3

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

fallacies-067 | Level 3 | Answer B

Prompt. During a debate about medication reminder texts for older patients, Taylor says the hospital should send medication reminder texts before evening doses because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, health, d3

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to popularity.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

fallacies-068 | Level 3 | Answer A

Prompt. During a debate about a four-day workweek test for software engineers, Morgan writes that the company should test a Monday-through-Thursday workweek because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, workplace, d3

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches circular reasoning.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches circular reasoning.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

fallacies-069 | Level 3 | Answer D

Prompt. During a debate about larger grocery unit-price labels, Casey points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, retail, d3

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.

Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

fallacies-070 | Level 3 | Answer C

Prompt. During a debate about late fines on children's books, Sam asks whether waiving late fines for children's books would affect library card renewals. Jordan answers by talking about this side detail: the children's-book checkout desk moved six feet. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, public services, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches red herring.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches red herring.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-071 | Level 3 | Answer B

Prompt. During a debate about two-factor login for site administrators, Riley says the platform should not require two-factor login for site administrators because the old way has been used for many years. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, technology, d3

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.
Study link: LogFall - Hasty generalization

fallacies-072 | Level 3 | Answer A

Prompt. During a debate about brighter streetlights on Maple Street, Maya says, "Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself correct	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, public safety, d3

A feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-073 | Level 3 | Answer D

Prompt. During a debate about peer tutoring for first-year statistics students, Sam asks for one more small test before the university decides. Morgan replies, "Sam wants to block every improvement forever." Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Straw man: misstates a view before attacking it as if it were real correct

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, education, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches straw man.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches straw man.
Study link: LogFall - Appeal to tradition

D feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

---

fallacies-074 | Level 3 | Answer C

Prompt. During a debate about calorie labels on restaurant menus, Avery says, "Either the restaurant group must show calorie labels on printed lunch menus right now, or it does not care about lunch customers at all." Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. False dilemma: pretends two choices are the only realistic options correct	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, nutrition, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-075 | Level 3 | Answer A

Prompt. During a debate about bank overdraft warning texts, Taylor rejects Jordan's proposal to send overdraft warning texts before fees post because Jordan once made a budgeting mistake. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument correct	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, finance, d3

A feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches ad hominem.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches ad hominem.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

fallacies-076 | Level 3 | Answer B

Prompt. During a debate about timed-entry passes for weekend park trails, Morgan says, "If the park service agrees to use timed-entry passes for weekend trail visits, soon every related rule will fall apart." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Slippery slope: predicts a chain reaction without enough support correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, environment, d3

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

fallacies-077 | Level 3 | Answer C

Prompt. During a debate about free Friday museum admission, Casey says the museum should offer free admission on Fridays because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Appeal to popularity: treats popularity as proof the claim is correct correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, culture, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to popularity.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

fallacies-078 | Level 3 | Answer D

Prompt. During a debate about youth soccer concussion checks, Jordan writes that the sports league should add mandatory sideline concussion checks because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Circular reasoning: uses the conclusion itself as its main support correct

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, sports, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches circular reasoning.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches circular reasoning.
Study link: LogFall - Slippery slope

D feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

fallacies-079 | Level 3 | Answer C

Prompt. During a debate about same-day donation receipts, Riley points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Hasty generalization: jumps from little evidence to a broad claim correct	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, nonprofit, d3

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches hasty generalization.
Study link: LogFall - False dilemma

C feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

fallacies-080 | Level 3 | Answer A

Prompt. During a debate about warehouse ergonomic training, Taylor asks whether offering monthly lifting-safety and ergonomic training would affect back-injury claims. Maya answers by talking about this side detail: the training room has a ceiling-mounted projector. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, workplace safety, d3

A feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches red herring.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.

Study link: LogFall - Post hoc ergo propter hoc

fallacies-081 | Level 3 | Answer C

Prompt. During a debate about apartment-lobby compost bins, Sam says the city sanitation office should not place compost bins in apartment lobbies because the old way has been used for many years. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Appeal to tradition: treats old habits as proof the claim is right correct	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, environment, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches appeal to tradition.
Study link: LogFall - Argumentum ad populum

C feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

fallacies-082 | Level 3 | Answer A

Prompt. During a debate about private-by-default app profiles, Avery says, "Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, technology, d3

A feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

fallacies-083 | Level 3 | Answer C

Prompt. During a debate about same-day clinic appointment slots, Taylor asks for one more small test before the clinic decides. Jordan replies, "Taylor wants to block every improvement forever." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Straw man: misstates a view before attacking it as if it were real correct	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, health, d3

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches straw man.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

fallacies-084 | Level 3 | Answer A

Prompt. During a debate about seat-zone airline boarding, Morgan says, "Either the airline must board passengers by seat zone right now, or it does not care about domestic flight passengers at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, travel, d3

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches false dilemma.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches false dilemma.
Study link: LogFall - Argumentum ad populum

fallacies-085 | Level 3 | Answer B

Prompt. During a debate about an online apartment repair portal, Casey rejects Maya's proposal to launch an online apartment repair portal because Maya once made a budgeting mistake. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument correct
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, housing, d3

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches ad hominem.
Study link: LogFall - Hasty generalization

B feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches ad hominem.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

fallacies-086 | Level 3 | Answer D

Prompt. During a debate about fruit placement in a school cafeteria line, Jordan says, "If the cafeteria agrees to move fruit bowls to the front of the cafeteria line, soon every related rule will fall apart." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Slippery slope: predicts a chain reaction without enough support correct

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, food, d3

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches slippery slope.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

fallacies-087 | Level 3 | Answer B

Prompt. During a debate about weekly call-center script coaching, Riley says the call center should give support agents weekly script coaching because the idea received the most likes in an online poll. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, customer support, d3

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to popularity.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches appeal to popularity.
Study link: LogFall - Appeal to tradition

fallacies-088 | Level 3 | Answer A

Prompt. During a debate about household water-leak alerts, Maya writes that the water utility should send automatic household water-leak alerts because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, utilities, d3

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.

Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches circular reasoning.
Study link: LogFall - Appeal to tradition

fallacies-089 | Level 3 | Answer B

Prompt. During a debate about body-camera activation reminders, Sam points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Hasty generalization: jumps from little evidence to a broad claim correct
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, governance, d3

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

B feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches hasty generalization.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.
Study link: LogFall - Appeal to tradition

fallacies-090 | Level 3 | Answer D

Prompt. During a debate about county mail-ballot tracking, Casey asks whether offering online mail-ballot tracking would affect phone calls asking ballot status. Avery answers by talking about this side detail: the ballot-tracking page uses county colors. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Red herring: changes the subject instead of addressing the issue correct

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, election administration, d3

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches red herring.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches red herring.
Study link: LogFall - Begging the question

D feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

fallacies-091 | Level 3 | Answer B

Prompt. During a debate about language-learning spaced-review prompts, Taylor says the tutoring app should not send spaced-review prompts for language vocabulary because the old way has been used for many years. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, learning, d3

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

fallacies-092 | Level 3 | Answer D

Prompt. During a debate about a beginner gym orientation, Morgan says, "New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Post hoc: treats timing as enough proof of cause by itself correct

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, fitness, d3

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches post hoc.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-093 | Level 3 | Answer B

Prompt. During a debate about safe-driving feedback for policyholders, Casey asks for one more small test before the insurer decides. Maya replies, "Casey wants to block every improvement forever." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, insurance, d3

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches straw man.
Study link: LogFall - False dilemma

fallacies-094 | Level 3 | Answer A

Prompt. During a debate about top-of-article correction boxes, Jordan says, "Either the newsroom must place corrections at the top of articles right now, or it does not care about newsletter readers at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, media, d3

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches false dilemma.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches false dilemma.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches false dilemma.
Study link: LogFall - Argumentum ad populum

fallacies-095 | Level 3 | Answer C

Prompt. During a debate about clearer farmers market price signs, Riley rejects Avery's proposal to require clearer price signs at vendor stalls because Avery once made a budgeting mistake. Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Ad hominem: attacks the person rather than answering the argument correct	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, local commerce, d3

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches ad hominem.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches ad hominem.
Study link: LogFall - Hasty generalization

fallacies-096 | Level 3 | Answer D

Prompt. During a debate about hotel quiet-hours text reminders, Maya says, "If the hotel agrees to send quiet-hours text reminders to hotel guests, soon every related rule will fall apart." Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Slippery slope: predicts a chain reaction without enough support correct

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, hospitality, d3

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches slippery slope.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

fallacies-097 | Level 4 | Answer C

Prompt. During a debate about evening bus service for late-shift workers, Avery says, "If the city council agrees to extend evening bus service until midnight, soon every related rule will fall apart." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Slippery slope: predicts a chain reaction without enough support correct	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, transportation, d4

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

C feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

fallacies-098 | Level 4 | Answer D

Prompt. During a debate about classroom phone lockers, Taylor says the school board should require phone lockers during class because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct correct

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, education, d4

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

D feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

fallacies-099 | Level 4 | Answer A

Prompt. During a debate about medication reminder texts for older patients, Morgan writes that the hospital should send medication reminder texts before evening doses because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, health, d4

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches circular reasoning.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

fallacies-100 | Level 4 | Answer B

Prompt. During a debate about a four-day workweek test for software engineers, Casey points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Hasty generalization: jumps from little evidence to a broad claim correct
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, workplace, d4

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches hasty generalization.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches hasty generalization.
Study link: LogFall - Straw man argument

fallacies-101 | Level 4 | Answer C

Prompt. During a debate about larger grocery unit-price labels, Sam asks whether adding larger unit-price labels on shelf tags would affect shopper overpayment complaints. Jordan answers by talking about this side detail: the shelf labels use bold black numbers. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, retail, d4

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-102 | Level 4 | Answer D

Prompt. During a debate about late fines on children's books, Riley says the library should not waive late fines for children's books because the old way has been used for many years. Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Appeal to tradition: treats old habits as proof the claim is right correct

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, public services, d4

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to tradition.
Study link: LogFall - Ad hominem

D feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

fallacies-103 | Level 4 | Answer A

Prompt. During a debate about two-factor login for site administrators, Maya says, "Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, technology, d4

A feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches post hoc.

Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-104 | Level 4 | Answer B

Prompt. During a debate about brighter streetlights on Maple Street, Sam asks for one more small test before the neighborhood association decides. Morgan replies, "Sam wants to block every improvement forever." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, public safety, d4

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches straw man.
Study link: LogFall - Slippery slope

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches straw man.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

fallacies-105 | Level 4 | Answer C

Prompt. During a debate about peer tutoring for first-year statistics students, Avery says, "Either the university must expand peer tutoring in statistics right now, or it does not care about first-year statistics students at all." Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. False dilemma: pretends two choices are the only realistic options correct	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, education, d4

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.

Study link: LogFall - Post hoc ergo propter hoc

C feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

fallacies-106 | Level 4 | Answer D

Prompt. During a debate about calorie labels on restaurant menus, Taylor rejects Jordan's proposal to show calorie labels on printed lunch menus because Jordan once made a budgeting mistake. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, nutrition, d4

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches ad hominem.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches ad hominem.
Study link: LogFall - Hasty generalization

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-107 | Level 4 | Answer D

Prompt. During a debate about bank overdraft warning texts, Morgan says, "If the bank agrees to send overdraft warning texts before fees post, soon every related rule will fall apart." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Slippery slope: predicts a chain reaction without enough support correct

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, finance, d4

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches slippery slope.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

fallacies-108 | Level 4 | Answer C

Prompt. During a debate about timed-entry passes for weekend park trails, Casey says the park service should use timed-entry passes for weekend trail visits because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Appeal to popularity: treats popularity as proof the claim is correct correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, environment, d4

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to popularity.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to popularity.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

fallacies-109 | Level 4 | Answer B

Prompt. During a debate about free Friday museum admission, Jordan writes that the museum should offer free admission on Fridays because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Circular reasoning: uses the conclusion itself as its main support correct
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, culture, d4

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches circular reasoning.
Study link: LogFall - Slippery slope

B feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches circular reasoning.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches circular reasoning.
Study link: LogFall - Red herring

---

fallacies-110 | Level 4 | Answer A

Prompt. During a debate about youth soccer concussion checks, Riley points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim correct	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, sports, d4

A feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches hasty generalization.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches hasty generalization.
Study link: LogFall - Straw man argument

---

fallacies-111 | Level 4 | Answer D

Prompt. During a debate about same-day donation receipts, Taylor asks whether sending donation receipts within one day would affect donor retention. Maya answers by talking about this side detail: the receipt email subject line changed. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Hasty generalization: jumps from little evidence to a broad claim choice
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Red herring: changes the subject instead of addressing the issue correct

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, nonprofit, d4

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches red herring.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

---

fallacies-112 | Level 4 | Answer C

Prompt. During a debate about warehouse ergonomic training, Sam says the warehouse should not offer monthly lifting-safety and ergonomic training because the old way has been used for many years. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Appeal to tradition: treats old habits as proof the claim is right correct	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, workplace safety, d4

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to tradition.
Study link: LogFall - Straw man argument

---

fallacies-113 | Level 4 | Answer B

Prompt. During a debate about apartment-lobby compost bins, Avery says, "Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Post hoc: treats timing as enough proof of cause by itself correct
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast

cases.

Tags: fallacies, fallacy, post-hoc, environment, d4

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

B feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches post hoc.
Study link: LogFall - Red herring

fallacies-114 | Level 4 | Answer A

Prompt. During a debate about private-by-default app profiles, Taylor asks for one more small test before the app maker decides. Jordan replies, "Taylor wants to block every improvement forever." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real correct	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, technology, d4

A feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches straw man.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches straw man.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.
Study link: LogFall - Red herring

fallacies-115 | Level 4 | Answer B

Prompt. During a debate about same-day clinic appointment slots, Morgan says, "Either the clinic must reserve same-day appointment slots right now, or it does not care about primary-care patients at all." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** False dilemma: pretends two choices are the only realistic options correct
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, health, d4

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches false dilemma.
Study link: LogFall - Straw man argument

---

fallacies-116 | Level 4 | Answer A

Prompt. During a debate about seat-zone airline boarding, Casey rejects Maya's proposal to board passengers by seat zone because Maya once made a budgeting mistake. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, travel, d4

A feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches ad hominem.
Study link: LogFall - Begging the question

fallacies-117 | Level 4 | Answer A

Prompt. During a debate about an online apartment repair portal, Jordan says, "If the landlord agrees to launch an online apartment repair portal, soon every related rule will fall apart." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support correct	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, housing, d4

A feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

fallacies-118 | Level 4 | Answer B

Prompt. During a debate about fruit placement in a school cafeteria line, Riley says the cafeteria should move fruit bowls to the front of the cafeteria line because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, food, d4

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches appeal to popularity.
Study link: LogFall - Ad hominem

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

fallacies-119 | Level 4 | Answer C

Prompt. During a debate about weekly call-center script coaching, Maya writes that the call center should give support agents weekly script coaching because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Circular reasoning: uses the conclusion itself as its main support correct	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, customer support, d4

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches circular reasoning.
Study link: LogFall - Red herring

C feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches circular reasoning.
Study link: LogFall - Appeal to tradition

fallacies-120 | Level 4 | Answer D

Prompt. During a debate about household water-leak alerts, Sam points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, utilities, d4

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches hasty generalization.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.

Study link: LogFall - Hasty generalization

fallacies-121 | Level 4 | Answer A

Prompt. During a debate about body-camera activation reminders, Casey asks whether sending body-camera activation reminders before patrol shifts would affect missing-camera-footage reports. Avery answers by talking about this side detail: the reminder tone is two beeps. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue correct	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, governance, d4

A feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches red herring.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches red herring.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches red herring.
Study link: LogFall - Hasty generalization

fallacies-122 | Level 4 | Answer B

Prompt. During a debate about county mail-ballot tracking, Taylor says the election office should not offer online mail-ballot tracking because the old way has been used for many years. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Red herring: changes the subject instead of addressing the issue choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, election administration, d4

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to tradition.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

fallacies-123 | Level 4 | Answer C

Prompt. During a debate about language-learning spaced-review prompts, Morgan says, "Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Post hoc: treats timing as enough proof of cause by itself correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, learning, d4

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches post hoc.
Study link: LogFall - Straw man argument

C feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-124 | Level 4 | Answer D

Prompt. During a debate about a beginner gym orientation, Casey asks for one more small test before the gym decides. Maya replies, "Casey wants to block every improvement forever." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Straw man: misstates a view before attacking it as if it were real correct

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, fitness, d4

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.

Study link: LogFall - Ad hominem

D feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

fallacies-125 | Level 4 | Answer C

Prompt. During a debate about safe-driving feedback for policyholders, Jordan says, "Either the insurer must send weekly safe-driving feedback right now, or it does not care about auto-insurance policyholders at all." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Slippery slope: predicts a chain reaction without enough support choice
C. False dilemma: pretends two choices are the only realistic options correct	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, insurance, d4

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches false dilemma.
Study link: LogFall - Slippery slope

C feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-126 | Level 4 | Answer D

Prompt. During a debate about top-of-article correction boxes, Riley rejects Avery's proposal to place corrections at the top of articles because Avery once made a budgeting mistake. Which fallacy is showing up?

A. Appeal to tradition: treats old habits as proof the claim is right choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Ad hominem: attacks the person rather than answering the argument correct

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, media, d4

A feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches ad hominem.
Study link: LogFall - Appeal to tradition

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches ad hominem.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

fallacies-127 | Level 4 | Answer B

Prompt. During a debate about clearer farmers market price signs, Maya says, "If the farmers market agrees to require clearer price signs at vendor stalls, soon every related rule will fall apart." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Slippery slope: predicts a chain reaction without enough support correct
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, local commerce, d4

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches slippery slope.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

fallacies-128 | Level 4 | Answer A

Prompt. During a debate about hotel quiet-hours text reminders, Sam says the hotel should send quiet-hours text reminders to hotel guests because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct correct	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, hospitality, d4

A feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to popularity.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to popularity.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

fallacies-129 | Level 5 | Answer D

Prompt. During a debate about evening bus service for late-shift workers, Taylor says the city council should extend evening bus service until midnight because the idea received the most likes in an online poll. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct correct

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, transportation, d5

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to popularity.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to popularity.
Study link: LogFall - Red herring

D feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

fallacies-130 | Level 5 | Answer C

Prompt. During a debate about classroom phone lockers, Morgan writes that the school board should require phone lockers during class because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Circular reasoning: uses the conclusion itself as its main support correct	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, education, d5

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches circular reasoning.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches circular reasoning.
Study link: LogFall - Appeal to tradition

fallacies-131 | Level 5 | Answer B

Prompt. During a debate about medication reminder texts for older patients, Casey points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Hasty generalization: jumps from little evidence to a broad claim correct
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, health, d5

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches hasty generalization.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

fallacies-132 | Level 5 | Answer A

Prompt. During a debate about a four-day workweek test for software engineers, Sam asks whether testing a Monday-through-Thursday workweek would affect staff resignations. Jordan answers by talking about this side detail: the test calendar starts on a Monday. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue correct	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Slippery slope: predicts a chain reaction without enough support choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, workplace, d5

A feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches red herring.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

---

fallacies-133 | Level 5 | Answer D

Prompt. During a debate about larger grocery unit-price labels, Riley says the grocery chain should not add larger unit-price labels on shelf tags because the old way has been used for many years. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Appeal to tradition: treats old habits as proof the claim is right correct

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, retail, d5

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to tradition.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches appeal to tradition.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

D feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

---

fallacies-134 | Level 5 | Answer C

Prompt. During a debate about late fines on children's books, Maya says, "Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. Post hoc: treats timing as enough proof of cause by itself correct	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast

cases.

Tags: fallacies, fallacy, post-hoc, public services, d5

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches post hoc.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

C feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches post hoc.
Study link: LogFall - Ad hominem

fallacies-135 | Level 5 | Answer B

Prompt. During a debate about two-factor login for site administrators, Sam asks for one more small test before the platform decides. Morgan replies, "Sam wants to block every improvement forever." Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Straw man: misstates a view before attacking it as if it were real correct
C. Post hoc: treats timing as enough proof of cause by itself choice	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, technology, d5

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

B feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

C feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches straw man.
Study link: LogFall - Post hoc ergo propter hoc

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches straw man.
Study link: LogFall - Hasty generalization

fallacies-136 | Level 5 | Answer A

Prompt. During a debate about brighter streetlights on Maple Street, Avery says, "Either the neighborhood association must add brighter LED streetlights on Maple Street right now, or it does not care about residents on Maple Street at all." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options correct	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Appeal to tradition: treats old habits as proof the claim is right choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, public safety, d5

A feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches false dilemma.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

---

fallacies-137 | Level 5 | Answer B

Prompt. During a debate about peer tutoring for first-year statistics students, Taylor rejects Jordan's proposal to expand peer tutoring in statistics because Jordan once made a budgeting mistake. Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Ad hominem: attacks the person rather than answering the argument correct
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, education, d5

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

B feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches ad hominem.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-138 | Level 5 | Answer A

Prompt. During a debate about calorie labels on restaurant menus, Morgan says, "If the restaurant group agrees to show calorie labels on printed lunch menus, soon every related rule will fall apart." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support correct	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Straw man: misstates a view before attacking it as if it were real choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, nutrition, d5

A feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches slippery slope.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

fallacies-139 | Level 5 | Answer C

Prompt. During a debate about bank overdraft warning texts, Casey says the bank should send overdraft warning texts before fees post because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Straw man: misstates a view before attacking it as if it were real choice
C. Appeal to popularity: treats popularity as proof the claim is correct correct	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, finance, d5

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to popularity.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

C feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches appeal to popularity.
Study link: LogFall - False dilemma

fallacies-140 | Level 5 | Answer D

Prompt. During a debate about timed-entry passes for weekend park trails, Jordan writes that the park service should use timed-entry passes for weekend trail visits because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Circular reasoning: uses the conclusion itself as its main support correct

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, environment, d5

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches circular reasoning.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches circular reasoning.
Study link: LogFall - Straw man argument

D feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

fallacies-141 | Level 5 | Answer A

Prompt. During a debate about free Friday museum admission, Riley points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, culture, d5

A feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches hasty generalization.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches hasty generalization.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches hasty generalization.
Study link: LogFall - Argumentum ad populum

fallacies-142 | Level 5 | Answer B

Prompt. During a debate about youth soccer concussion checks, Taylor asks whether adding mandatory sideline concussion checks would affect repeat head injuries. Maya answers by talking about this side detail: the concussion checklist is printed on yellow paper. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support choice	**B.** Red herring: changes the subject instead of addressing the issue correct
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, sports, d5

A feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches red herring.
Study link: LogFall - Begging the question

B feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches red herring.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches red herring.
Study link: LogFall - Appeal to tradition

fallacies-143 | Level 5 | Answer C

Prompt. During a debate about same-day donation receipts, Sam says the nonprofit should not send donation receipts within one day because the old way has been used for many years. Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Appeal to tradition: treats old habits as proof the claim is right correct	**D.** Hasty generalization: jumps from little evidence to a broad claim choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, nonprofit, d5

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to tradition.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

D feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to tradition.

Study link: LogFall - Hasty generalization

fallacies-144 | Level 5 | Answer D

Prompt. During a debate about warehouse ergonomic training, Avery says, "Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Post hoc: treats timing as enough proof of cause by itself correct

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, workplace safety, d5

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches post hoc.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches post hoc.
Study link: LogFall - Hasty generalization

D feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-145 | Level 5 | Answer A

Prompt. During a debate about apartment-lobby compost bins, Taylor asks for one more small test before the city sanitation office decides. Jordan replies, "Taylor wants to block every improvement forever." Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real correct	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, environment, d5

A feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches straw man.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.

Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches straw man.
Study link: LogFall - Begging the question

fallacies-146 | Level 5 | Answer B

Prompt. During a debate about private-by-default app profiles, Morgan says, "Either the app maker must make new user profiles private by default right now, or it does not care about new app users at all." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** False dilemma: pretends two choices are the only realistic options correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Circular reasoning: uses the conclusion itself as its main support choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, technology, d5

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches false dilemma.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches false dilemma.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches false dilemma.
Study link: LogFall - Begging the question

fallacies-147 | Level 5 | Answer C

Prompt. During a debate about same-day clinic appointment slots, Casey rejects Maya's proposal to reserve same-day appointment slots because Maya once made a budgeting mistake. Which fallacy is showing up?

A. Hasty generalization: jumps from little evidence to a broad claim choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Ad hominem: attacks the person rather than answering the argument correct	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, health, d5

A feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches ad hominem.
Study link: LogFall - Hasty generalization

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches ad hominem.
Study link: LogFall - Red herring

C feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches ad hominem.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-148 | Level 5 | Answer D

Prompt. During a debate about seat-zone airline boarding, Jordan says, "If the airline agrees to board passengers by seat zone, soon every related rule will fall apart." Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** False dilemma: pretends two choices are the only realistic options choice
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Slippery slope: predicts a chain reaction without enough support correct

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, travel, d5

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches slippery slope.
Study link: LogFall - Red herring

B feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches slippery slope.
Study link: LogFall - False dilemma

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches slippery slope.
Study link: LogFall - Begging the question

D feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

fallacies-149 | Level 5 | Answer B

Prompt. During a debate about an online apartment repair portal, Riley says the landlord should launch an online apartment repair portal because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct correct
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, housing, d5

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to popularity.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches appeal to popularity.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches appeal to popularity.
Study link: LogFall - Appeal to tradition

fallacies-150 | Level 5 | Answer A

Prompt. During a debate about fruit placement in a school cafeteria line, Maya writes that the cafeteria should move fruit bowls to the front of the cafeteria line because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Circular reasoning: uses the conclusion itself as its main support correct	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Hasty generalization: jumps from little evidence to a broad claim choice	**D.** Appeal to popularity: treats popularity as proof the claim is correct choice

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, food, d5

A feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches circular reasoning.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Hasty generalization would involve a different mistake: it jumps from little evidence to a broad claim. The debate instead matches circular reasoning.
Study link: LogFall - Hasty generalization

D feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.
Study link: LogFall - Argumentum ad populum

fallacies-151 | Level 5 | Answer D

Prompt. During a debate about weekly call-center script coaching, Sam points to one group that reported success with a similar change and says the same result will happen everywhere. Which fallacy is showing up?

A. Ad hominem: attacks the person rather than answering the argument choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. False dilemma: pretends two choices are the only realistic options choice	**D.** Hasty generalization: jumps from little evidence to a broad claim correct

Core explanation. Hasty generalization: A broad conclusion is drawn from too little evidence.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Hasty generalization: jumps from little evidence to a broad claim. Use the other labels as contrast cases.

Tags: fallacies, fallacy, hasty-generalization, customer support, d5

A feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches hasty generalization.
Study link: LogFall - Ad hominem

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches hasty generalization.

Study link: LogFall - Begging the question

C feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches hasty generalization.
Study link: LogFall - False dilemma

D feedback (Correct): Correct. Hasty generalization: A broad conclusion is drawn from too little evidence. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Hasty generalization

fallacies-152 | Level 5 | Answer C

Prompt. During a debate about household water-leak alerts, Casey asks whether sending automatic household water-leak alerts would affect average household water use. Avery answers by talking about this side detail: the water-leak alert screen includes a blue droplet icon. Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself choice	**B.** Ad hominem: attacks the person rather than answering the argument choice
C. Red herring: changes the subject instead of addressing the issue correct	**D.** Slippery slope: predicts a chain reaction without enough support choice

Core explanation. Red herring: The response shifts attention to an irrelevant issue.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Red herring: changes the subject instead of addressing the issue. Use the other labels as contrast cases.

Tags: fallacies, fallacy, red-herring, utilities, d5

A feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches red herring.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches red herring.
Study link: LogFall - Ad hominem

C feedback (Correct): Correct. Red herring: The response shifts attention to an irrelevant issue. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Red herring

D feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches red herring.
Study link: LogFall - Slippery slope

fallacies-153 | Level 5 | Answer B

Prompt. During a debate about body-camera activation reminders, Taylor says the police department should not send body-camera activation reminders before patrol shifts because the old way has been used for many years. Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Appeal to tradition: treats old habits as proof the claim is right correct
C. Circular reasoning: uses the conclusion itself as its main support choice	**D.** Post hoc: treats timing as enough proof of cause by itself choice

Core explanation. Appeal to tradition: The argument treats age or tradition as enough proof.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Appeal to tradition: treats old habits as proof the claim is right. Use the other labels as contrast cases.

Tags: fallacies, fallacy, appeal-to-tradition, governance, d5

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches appeal to tradition.

Study link: LogFall - Slippery slope

B feedback (Correct): Correct. Appeal to tradition: The argument treats age or tradition as enough proof. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to tradition.
Study link: LogFall - Begging the question

D feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches appeal to tradition.
Study link: LogFall - Post hoc ergo propter hoc

fallacies-154 | Level 5 | Answer A

Prompt. During a debate about county mail-ballot tracking, Morgan says, "Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it, so the policy must have caused the change." Which fallacy is showing up?

A. Post hoc: treats timing as enough proof of cause by itself correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Appeal to popularity: treats popularity as proof the claim is correct choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Post hoc: The argument assumes that because one event came after another, the first caused the second.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Post hoc: treats timing as enough proof of cause by itself. Use the other labels as contrast cases.

Tags: fallacies, fallacy, post-hoc, election administration, d5

A feedback (Correct): Correct. Post hoc: The argument assumes that because one event came after another, the first caused the second. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Post hoc ergo propter hoc

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches post hoc.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches post hoc.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches post hoc.
Study link: LogFall - False dilemma

fallacies-155 | Level 5 | Answer D

Prompt. During a debate about language-learning spaced-review prompts, Casey asks for one more small test before the tutoring app decides. Maya replies, "Casey wants to block every improvement forever." Which fallacy is showing up?

A. False dilemma: pretends two choices are the only realistic options choice	**B.** Red herring: changes the subject instead of addressing the issue choice
C. Ad hominem: attacks the person rather than answering the argument choice	**D.** Straw man: misstates a view before attacking it as if it were real correct

Core explanation. Straw man: The reply attacks an exaggerated version of the other person's view.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Straw man: misstates a view before attacking it as if it were real. Use the other labels as contrast cases.

Tags: fallacies, fallacy, straw-man, learning, d5

A feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches straw man.
Study link: LogFall - False dilemma

B feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches straw man.
Study link: LogFall - Red herring

C feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches straw man.
Study link: LogFall - Ad hominem

D feedback (Correct): Correct. Straw man: The reply attacks an exaggerated version of the other person's view. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Straw man argument

fallacies-156 | Level 5 | Answer C

Prompt. During a debate about a beginner gym orientation, Jordan says, "Either the gym must offer a beginner gym orientation right now, or it does not care about new gym members at all." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support choice	**B.** Appeal to popularity: treats popularity as proof the claim is correct choice
C. False dilemma: pretends two choices are the only realistic options correct	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. False dilemma: The argument acts like there are only two choices when there may be more.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: False dilemma: pretends two choices are the only realistic options. Use the other labels as contrast cases.

Tags: fallacies, fallacy, false-dilemma, fitness, d5

A feedback (Distractor): Not quite. Slippery slope would involve a different mistake: it predicts a chain reaction without enough support. The debate instead matches false dilemma.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches false dilemma.
Study link: LogFall - Argumentum ad populum

C feedback (Correct): Correct. False dilemma: The argument acts like there are only two choices when there may be more. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - False dilemma

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches false dilemma.
Study link: LogFall - Ad hominem

fallacies-157 | Level 5 | Answer B

Prompt. During a debate about safe-driving feedback for policyholders, Riley rejects Avery's proposal to send weekly safe-driving feedback because Avery once made a budgeting mistake. Which fallacy is showing up?

A. Red herring: changes the subject instead of addressing the issue choice	**B.** Ad hominem: attacks the person rather than answering the argument correct
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** False dilemma: pretends two choices are the only realistic options choice

Core explanation. Ad hominem: The response attacks the person instead of the argument.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is B because the scenario matches that pattern: Ad hominem: attacks the person rather than answering the argument. Use the other labels as contrast cases.

Tags: fallacies, fallacy, ad-hominem, insurance, d5

A feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches ad hominem.
Study link: LogFall - Red herring

B feedback (Correct): Correct. Ad hominem: The response attacks the person instead of the argument. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Ad hominem

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches ad hominem.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. False dilemma would involve a different mistake: it pretends two choices are the only realistic options. The debate instead matches ad hominem.
Study link: LogFall - False dilemma

fallacies-158 | Level 5 | Answer A

Prompt. During a debate about top-of-article correction boxes, Maya says, "If the newsroom agrees to place corrections at the top of articles, soon every related rule will fall apart." Which fallacy is showing up?

A. Slippery slope: predicts a chain reaction without enough support correct	**B.** Appeal to tradition: treats old habits as proof the claim is right choice
C. Straw man: misstates a view before attacking it as if it were real choice	**D.** Ad hominem: attacks the person rather than answering the argument choice

Core explanation. Slippery slope: The argument predicts an extreme chain reaction without support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is A because the scenario matches that pattern: Slippery slope: predicts a chain reaction without enough support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, slippery-slope, media, d5

A feedback (Correct): Correct. Slippery slope: The argument predicts an extreme chain reaction without support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Slippery slope

B feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches slippery slope.
Study link: LogFall - Appeal to tradition

C feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches slippery slope.
Study link: LogFall - Straw man argument

D feedback (Distractor): Not quite. Ad hominem would involve a different mistake: it attacks the person rather than answering the argument. The debate instead matches slippery slope.
Study link: LogFall - Ad hominem

fallacies-159 | Level 5 | Answer C

Prompt. During a debate about clearer farmers market price signs, Sam says the farmers market should require clearer price signs at vendor stalls because the idea received the most likes in an online poll. Which fallacy is showing up?

A. Straw man: misstates a view before attacking it as if it were real choice	**B.** Circular reasoning: uses the conclusion itself as its main support choice
C. Appeal to popularity: treats popularity as proof the claim is correct correct	**D.** Appeal to tradition: treats old habits as proof the claim is right choice

Core explanation. Appeal to popularity: Popularity is treated as proof that the idea is correct.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is C because the scenario matches that pattern: Appeal to popularity: treats popularity as proof the claim is correct. Use the other labels as

contrast cases.

Tags: fallacies, fallacy, appeal-to-popularity, local commerce, d5

A feedback (Distractor): Not quite. Straw man would involve a different mistake: it misstates a view before attacking it as if it were real. The debate instead matches appeal to popularity.
Study link: LogFall - Straw man argument

B feedback (Distractor): Not quite. Circular reasoning would involve a different mistake: it uses the conclusion itself as its main support. The debate instead matches appeal to popularity.
Study link: LogFall - Begging the question

C feedback (Correct): Correct. Appeal to popularity: Popularity is treated as proof that the idea is correct. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Argumentum ad populum

D feedback (Distractor): Not quite. Appeal to tradition would involve a different mistake: it treats old habits as proof the claim is right. The debate instead matches appeal to popularity.
Study link: LogFall - Appeal to tradition

---

fallacies-160 | Level 5 | Answer D

Prompt. During a debate about hotel quiet-hours text reminders, Avery writes that the hotel should send quiet-hours text reminders to hotel guests because it is the right move, and it is the right move because it should be done. Which fallacy is showing up?

A. Appeal to popularity: treats popularity as proof the claim is correct choice	**B.** Post hoc: treats timing as enough proof of cause by itself choice
C. Red herring: changes the subject instead of addressing the issue choice	**D.** Circular reasoning: uses the conclusion itself as its main support correct

Core explanation. Circular reasoning: The conclusion is used as its own support.

Process commentary. To uncover the answer, describe the bad move before naming it. The correct choice is D because the scenario matches that pattern: Circular reasoning: uses the conclusion itself as its main support. Use the other labels as contrast cases.

Tags: fallacies, fallacy, circular-reasoning, hospitality, d5

A feedback (Distractor): Not quite. Appeal to popularity would involve a different mistake: it treats popularity as proof the claim is correct. The debate instead matches circular reasoning.
Study link: LogFall - Argumentum ad populum

B feedback (Distractor): Not quite. Post hoc would involve a different mistake: it treats timing as enough proof of cause by itself. The debate instead matches circular reasoning.
Study link: LogFall - Post hoc ergo propter hoc

C feedback (Distractor): Not quite. Red herring would involve a different mistake: it changes the subject instead of addressing the issue. The debate instead matches circular reasoning.
Study link: LogFall - Red herring

D feedback (Correct): Correct. Circular reasoning: The conclusion is used as its own support. The wording of the choice names the same mistake shown in the debate.
Study link: LogFall - Begging the question

Skill 10

Think Probabilistically

How Likely Is It?

Choose the answer that handles chance and uncertainty well. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How should uncertainty affect what we expect?
Why it matters	Probability helps people think between impossible and guaranteed. Many real decisions involve signals, forecasts, false alarms, base rates, and uncertainty rather than proof.
Conceptual core	Probability gives students language for partial belief. Many claims are neither proved nor disproved; they are more or less likely given the information available. Students need to distinguish chance from certainty, risk from outcome, signal from guarantee, and individual cases from long-run frequencies. This is essential for forecasts, tests, warnings, and everyday planning.
Student method	Translate percentages into out-of-100 language. Ask whether the number is a chance, a frequency, a warning signal, or a guarantee. Keep uncertainty visible.
Analogy	Probability is a weather forecast for belief. A 70 percent chance of rain matters, but it is not the same as rain already falling.
Assessment focus	A good answer uses the probability as evidence without turning it into certainty or dismissing it as useless.

Teaching Sequence

1. Translate percentages into out-of-100 language.

2. Ask whether the number describes a chance, a frequency, a false alarm rate, or a prediction.

3. Keep likely separate from certain and unlikely separate from impossible.

4. Notice when the evidence changes odds without settling the result.

Common Confusions To Watch For

1. Students may treat a high probability as a guarantee.

2. Students may treat a low probability as impossible.

3. Students may ignore the base rate or the group the probability applies to.

Teacher Prompts

1. Out of 100 similar cases, about how many would we expect?

2. Does this number tell us what will happen here, or how often it tends to happen?

3. What uncertainty remains?

Worked Example

Scenario	A weather app says there is a 70 percent chance of rain in town tomorrow.
Teacher think-aloud	That does not mean it will rain for 70 percent of the day or that rain is guaranteed. It means that in similar forecast situations, rain would occur about 70 out of 100 times.
Student takeaway	Probability guides expectations while leaving room for uncertainty.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A weather app assigns a 70% chance of measurable rain tomorrow. For this exercise, measurable rain means at least 1 mm at the town weather station during that calendar day. Imagine 100 comparable forecasts, each issued a day ahead at 70%, from a well-calibrated app: its stated probabilities match long-run frequencies.

What To Do

1. Write approximately how many of those 100 days should have measurable rain and how many should not.

2. Explain why a dry tomorrow would not by itself refute a 70% forecast.

3. Write what record you would inspect to judge whether the app's 70% forecasts are well calibrated.

Check before reading the answer. Do not treat 70% as a guarantee, a claim about 70% of the town, or a claim that rain lasts 70% of the day.

Model Answer

About 70 days should have measurable rain and about 30 should not; exact counts can vary. A dry tomorrow is allowed by the 30% chance of no rain. I would inspect many comparable forecasts recorded in advance at 70%, keeping dry days as well as wet ones, and compare their rain frequency with 70%.

Why it is adequate. It identifies the event and reference group and evaluates a probabilistic claim across a record rather than a single outcome.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

probability-001 | Level 1 | Answer A

Prompt. A month-ahead forecast for evening bus service for late-shift workers says the chance is 25 out of 100 that late-shift commute complaints will fall. What does that percentage mean?

A. In many similar cases, the improvement would happen about 25 out of 100 times. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, transportation, d1, p25

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-002 | Level 1 | Answer B

Prompt. A month-ahead forecast for classroom phone lockers says the chance is 30 out of 100 that classroom disruption reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** If there were 100 similar forecasts, about 30 would be expected to improve. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d1, p30

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-003 | Level 1 | Answer C

Prompt. A month-ahead forecast for medication reminder texts for older patients says the chance is 40 out of 100 that missed-dose reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast says improvement is possible but not guaranteed: about 40 chances in 100. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d1, p40

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-004 | Level 1 | Answer D

Prompt. A month-ahead forecast for a four-day workweek test for software engineers says the chance is 55 out of 100 that staff resignations will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** It leaves room for the result not to happen, because 55% is a chance rather than a promise. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace, d1, p55

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-005 | Level 1 | Answer A

Prompt. A month-ahead forecast for larger grocery unit-price labels says the chance is 60 out of 100 that shopper overpayment complaints will fall. What does that percentage mean?

A. The number estimates how often this improvement would happen across many similar cases. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, retail, d1, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-006 | Level 1 | Answer B

Prompt. A month-ahead forecast for late fines on children's books says the chance is 65 out of 100 that library card renewals will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** Out of 100 cases like this, roughly 65 would be expected to improve. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public services, d1, p65

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-007 | Level 1 | Answer C

Prompt. A month-ahead forecast for two-factor login for site administrators says the chance is 70 out of 100 that admin account takeovers will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. A 70-out-of-100 chance means the result may happen, but it may not. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d1, p70

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-008 | Level 1 | Answer D

Prompt. A month-ahead forecast for brighter streetlights on Maple Street says the chance is 75 out of 100 that reported thefts will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public safety, d1, p75

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-009 | Level 1 | Answer C

Prompt. A month-ahead forecast for peer tutoring for first-year statistics students says the chance is 80 out of 100 that course pass rates will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. About 80 of 100 similar situations would be expected to show the improvement. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-010 | Level 1 | Answer D

Prompt. A month-ahead forecast for calorie labels on restaurant menus says the chance is 85 out of 100 that dessert orders will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** This is a likelihood estimate: the result is possible, not certain. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nutrition, d1, p85

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-011 | Level 1 | Answer B

Prompt. A month-ahead forecast for bank overdraft warning texts says the chance is 90 out of 100 that overdraft fees will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** In many similar cases, the improvement would happen about 90 out of 100 times. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, finance, d1, p90

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-012 | Level 1 | Answer D

Prompt. A month-ahead forecast for timed-entry passes for weekend park trails says the chance is 15 out of 100 that trail crowding complaints will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** If there were 100 similar forecasts, about 15 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-013 | Level 1 | Answer B

Prompt. A month-ahead forecast for free Friday museum admission says the chance is 35 out of 100 that family visits will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast says improvement is possible but not guaranteed: about 35 chances in 100. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, culture, d1, p35

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-014 | Level 1 | Answer A

Prompt. A month-ahead forecast for youth soccer concussion checks says the chance is 45 out of 100 that repeat head injuries will fall. What does that percentage mean?

A. It leaves room for the result not to happen, because 45% is a chance rather than a promise. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, sports, d1, p45

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-015 | Level 1 | Answer B

Prompt. A month-ahead forecast for same-day donation receipts says the chance is 50 out of 100 that donor retention will rise. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The number estimates how often this improvement would happen across many similar cases. correct
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nonprofit, d1, p50

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-016 | Level 1 | Answer D

Prompt. A month-ahead forecast for warehouse ergonomic training says the chance is 20 out of 100 that back-injury claims will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** Out of 100 cases like this, roughly 20 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace safety, d1, p20

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-017 | Level 1 | Answer B

Prompt. A month-ahead forecast for apartment-lobby compost bins says the chance is 25 out of 100 that landfill waste from participating buildings will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** A 25-out-of-100 chance means the result may happen, but it may not. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d1, p25

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-018 | Level 1 | Answer D

Prompt. A month-ahead forecast for private-by-default app profiles says the chance is 30 out of 100 that publicly visible profiles will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-019 | Level 1 | Answer D

Prompt. A month-ahead forecast for same-day clinic appointment slots says the chance is 40 out of 100 that patient no-show rates will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** About 40 of 100 similar situations would be expected to show the improvement. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d1, p40

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-020 | Level 1 | Answer C

Prompt. A month-ahead forecast for seat-zone airline boarding says the chance is 55 out of 100 that average boarding time will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. This is a likelihood estimate: the result is possible, not certain. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, travel, d1, p55

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-021 | Level 1 | Answer A

Prompt. A month-ahead forecast for an online apartment repair portal says the chance is 60 out of 100 that unresolved repair requests will fall. What does that percentage mean?

A. In many similar cases, the improvement would happen about 60 out of 100 times. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, housing, d1, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-022 | Level 1 | Answer B

Prompt. A month-ahead forecast for fruit placement in a school cafeteria line says the chance is 65 out of 100 that fruit purchases will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** If there were 100 similar forecasts, about 65 would be expected to improve. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, food, d1, p65

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-023 | Level 1 | Answer C

Prompt. A month-ahead forecast for weekly call-center script coaching says the chance is 70 out of 100 that customer complaint rates will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast says improvement is possible but not guaranteed: about 70 chances in 100. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, customer support, d1, p70

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-024 | Level 1 | Answer D

Prompt. A month-ahead forecast for household water-leak alerts says the chance is 75 out of 100 that average household water use will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** It leaves room for the result not to happen, because 75% is a chance rather than a promise. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, utilities, d1, p75

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-025 | Level 1 | Answer C

Prompt. A month-ahead forecast for body-camera activation reminders says the chance is 80 out of 100 that missing-camera-footage reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The number estimates how often this improvement would happen across many similar cases. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, governance, d1, p80

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-026 | Level 1 | Answer A

Prompt. A month-ahead forecast for county mail-ballot tracking says the chance is 85 out of 100 that phone calls asking ballot status will fall. What does that percentage mean?

A. Out of 100 cases like this, roughly 85 would be expected to improve. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, election administration, d1, p85

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-027 | Level 1 | Answer C

Prompt. A month-ahead forecast for language-learning spaced-review prompts says the chance is 90 out of 100 that vocabulary retention quiz scores will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. A 90-out-of-100 chance means the result may happen, but it may not. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, learning, d1, p90

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-028 | Level 1 | Answer A

Prompt. A month-ahead forecast for a beginner gym orientation says the chance is 15 out of 100 that new-member cancellations will fall. What does that percentage mean?

A. The percentage describes a chance across repeated similar cases, not a promise for this one. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, fitness, d1, p15

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-029 | Level 1 | Answer C

Prompt. A month-ahead forecast for safe-driving feedback for policyholders says the chance is 35 out of 100 that reported minor crashes will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. About 35 of 100 similar situations would be expected to show the improvement. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, insurance, d1, p35

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-030 | Level 1 | Answer A

Prompt. A month-ahead forecast for top-of-article correction boxes says the chance is 45 out of 100 that reader trust ratings will rise. What does that percentage mean?

A. This is a likelihood estimate: the result is possible, not certain. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, media, d1, p45

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-031 | Level 1 | Answer B

Prompt. A month-ahead forecast for clearer farmers market price signs says the chance is 50 out of 100 that price disputes will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** In many similar cases, the improvement would happen about 50 out of 100 times. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, local commerce, d1, p50

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-032 | Level 1 | Answer A

Prompt. A month-ahead forecast for hotel quiet-hours text reminders says the chance is 20 out of 100 that noise complaints from guest rooms will fall. What does that percentage mean?

A. If there were 100 similar forecasts, about 20 would be expected to improve. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, hospitality, d1, p20

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

probability-033 | Level 2 | Answer D

Prompt. A month-ahead forecast for evening bus service for late-shift workers says the chance is 30 out of 100 that late-shift commute complaints will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** If there were 100 similar forecasts, about 30 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, transportation, d2, p30

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-034 | Level 2 | Answer C

Prompt. A month-ahead forecast for classroom phone lockers says the chance is 40 out of 100 that classroom disruption reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast says improvement is possible but not guaranteed: about 40 chances in 100. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d2, p40

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-035 | Level 2 | Answer B

Prompt. A month-ahead forecast for medication reminder texts for older patients says the chance is 55 out of 100 that missed-dose reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** It leaves room for the result not to happen, because 55% is a chance rather than a promise. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d2, p55

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-036 | Level 2 | Answer A

Prompt. A month-ahead forecast for a four-day workweek test for software engineers says the chance is 60 out of 100 that staff resignations will fall. What does that percentage mean?

A. The number estimates how often this improvement would happen across many similar cases. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace, d2, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-037 | Level 2 | Answer D

Prompt. A month-ahead forecast for larger grocery unit-price labels says the chance is 65 out of 100 that shopper overpayment complaints will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** Out of 100 cases like this, roughly 65 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, retail, d2, p65

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-038 | Level 2 | Answer C

Prompt. A month-ahead forecast for late fines on children's books says the chance is 70 out of 100 that library card renewals will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. A 70-out-of-100 chance means the result may happen, but it may not. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public services, d2, p70

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-039 | Level 2 | Answer B

Prompt. A month-ahead forecast for two-factor login for site administrators says the chance is 75 out of 100 that admin account takeovers will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d2, p75

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-040 | Level 2 | Answer A

Prompt. A month-ahead forecast for brighter streetlights on Maple Street says the chance is 80 out of 100 that reported thefts will fall. What does that percentage mean?

A. About 80 of 100 similar situations would be expected to show the improvement. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public safety, d2, p80

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-041 | Level 2 | Answer B

Prompt. A month-ahead forecast for peer tutoring for first-year statistics students says the chance is 85 out of 100 that course pass rates will rise. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** This is a likelihood estimate: the result is possible, not certain. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d2, p85

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-042 | Level 2 | Answer A

Prompt. A month-ahead forecast for calorie labels on restaurant menus says the chance is 90 out of 100 that dessert orders will fall. What does that percentage mean?

A. In many similar cases, the improvement would happen about 90 out of 100 times. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nutrition, d2, p90

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-043 | Level 2 | Answer C

Prompt. A month-ahead forecast for bank overdraft warning texts says the chance is 15 out of 100 that overdraft fees will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. If there were 100 similar forecasts, about 15 would be expected to improve. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, finance, d2, p15

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-044 | Level 2 | Answer D

Prompt. A month-ahead forecast for timed-entry passes for weekend park trails says the chance is 35 out of 100 that trail crowding complaints will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The forecast says improvement is possible but not guaranteed: about 35 chances in 100. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d2, p35

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-045 | Level 2 | Answer A

Prompt. A month-ahead forecast for free Friday museum admission says the chance is 45 out of 100 that family visits will rise. What does that percentage mean?

A. It leaves room for the result not to happen, because 45% is a chance rather than a promise. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, culture, d2, p45

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-046 | Level 2 | Answer B

Prompt. A month-ahead forecast for youth soccer concussion checks says the chance is 50 out of 100 that repeat head injuries will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The number estimates how often this improvement would happen across many similar cases. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, sports, d2, p50

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-047 | Level 2 | Answer C

Prompt. A month-ahead forecast for same-day donation receipts says the chance is 20 out of 100 that donor retention will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. Out of 100 cases like this, roughly 20 would be expected to improve. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nonprofit, d2, p20

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-048 | Level 2 | Answer D

Prompt. A month-ahead forecast for warehouse ergonomic training says the chance is 25 out of 100 that back-injury claims will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** A 25-out-of-100 chance means the result may happen, but it may not. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace safety, d2, p25

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-049 | Level 2 | Answer A

Prompt. A month-ahead forecast for apartment-lobby compost bins says the chance is 30 out of 100 that landfill waste from participating buildings will fall. What does that percentage mean?

A. The percentage describes a chance across repeated similar cases, not a promise for this one. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d2, p30

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-050 | Level 2 | Answer B

Prompt. A month-ahead forecast for private-by-default app profiles says the chance is 40 out of 100 that publicly visible profiles will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** About 40 of 100 similar situations would be expected to show the improvement. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d2, p40

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-051 | Level 2 | Answer C

Prompt. A month-ahead forecast for same-day clinic appointment slots says the chance is 55 out of 100 that patient no-show rates will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. This is a likelihood estimate: the result is possible, not certain. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d2, p55

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-052 | Level 2 | Answer D

Prompt. A month-ahead forecast for seat-zone airline boarding says the chance is 60 out of 100 that average boarding time will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** In many similar cases, the improvement would happen about 60 out of 100 times. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, travel, d2, p60

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-053 | Level 2 | Answer B

Prompt. A month-ahead forecast for an online apartment repair portal says the chance is 65 out of 100 that unresolved repair requests will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** If there were 100 similar forecasts, about 65 would be expected to improve. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, housing, d2, p65

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-054 | Level 2 | Answer A

Prompt. A month-ahead forecast for fruit placement in a school cafeteria line says the chance is 70 out of 100 that fruit purchases will rise. What does that percentage mean?

A. The forecast says improvement is possible but not guaranteed: about 70 chances in 100. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, food, d2, p70

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-055 | Level 2 | Answer D

Prompt. A month-ahead forecast for weekly call-center script coaching says the chance is 75 out of 100 that customer complaint rates will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** It leaves room for the result not to happen, because 75% is a chance rather than a promise. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-056 | Level 2 | Answer C

Prompt. A month-ahead forecast for household water-leak alerts says the chance is 80 out of 100 that average household water use will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The number estimates how often this improvement would happen across many similar cases. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, utilities, d2, p80

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-057 | Level 2 | Answer B

Prompt. A month-ahead forecast for body-camera activation reminders says the chance is 85 out of 100 that missing-camera-footage reports will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** Out of 100 cases like this, roughly 85 would be expected to improve. correct
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, governance, d2, p85

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-058 | Level 2 | Answer A

Prompt. A month-ahead forecast for county mail-ballot tracking says the chance is 90 out of 100 that phone calls asking ballot status will fall. What does that percentage mean?

A. A 90-out-of-100 chance means the result may happen, but it may not. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, election administration, d2, p90

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-059 | Level 2 | Answer D

Prompt. A month-ahead forecast for language-learning spaced-review prompts says the chance is 15 out of 100 that vocabulary retention quiz scores will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, learning, d2, p15

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-060 | Level 2 | Answer C

Prompt. A month-ahead forecast for a beginner gym orientation says the chance is 35 out of 100 that new-member cancellations will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. About 35 of 100 similar situations would be expected to show the improvement. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, fitness, d2, p35

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-061 | Level 2 | Answer B

Prompt. A month-ahead forecast for safe-driving feedback for policyholders says the chance is 45 out of 100 that reported minor crashes will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** This is a likelihood estimate: the result is possible, not certain. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, insurance, d2, p45

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-062 | Level 2 | Answer A

Prompt. A month-ahead forecast for top-of-article correction boxes says the chance is 50 out of 100 that reader trust ratings will rise. What does that percentage mean?

A. In many similar cases, the improvement would happen about 50 out of 100 times. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, media, d2, p50

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-063 | Level 2 | Answer C

Prompt. A month-ahead forecast for clearer farmers market price signs says the chance is 20 out of 100 that price disputes will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. If there were 100 similar forecasts, about 20 would be expected to improve. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, local commerce, d2, p20

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-064 | Level 2 | Answer D

Prompt. A month-ahead forecast for hotel quiet-hours text reminders says the chance is 25 out of 100 that noise complaints from guest rooms will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast says improvement is possible but not guaranteed: about 25 chances in 100. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, hospitality, d2, p25

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

probability-065 | Level 3 | Answer C

Prompt. A month-ahead forecast for evening bus service for late-shift workers says the chance is 40 out of 100 that late-shift commute complaints will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast says improvement is possible but not guaranteed: about 40 chances in 100. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, transportation, d3, p40

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-066 | Level 3 | Answer D

Prompt. A month-ahead forecast for classroom phone lockers says the chance is 55 out of 100 that classroom disruption reports will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** It leaves room for the result not to happen, because 55% is a chance rather than a promise. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d3, p55

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-067 | Level 3 | Answer A

Prompt. A month-ahead forecast for medication reminder texts for older patients says the chance is 60 out of 100 that missed-dose reports will fall. What does that percentage mean?

A. The number estimates how often this improvement would happen across many similar cases. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d3, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-068 | Level 3 | Answer B

Prompt. A month-ahead forecast for a four-day workweek test for software engineers says the chance is 65 out of 100 that staff resignations will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** Out of 100 cases like this, roughly 65 would be expected to improve. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace, d3, p65

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-069 | Level 3 | Answer C

Prompt. A month-ahead forecast for larger grocery unit-price labels says the chance is 70 out of 100 that shopper overpayment complaints will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. A 70-out-of-100 chance means the result may happen, but it may not. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, retail, d3, p70

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-070 | Level 3 | Answer D

Prompt. A month-ahead forecast for late fines on children's books says the chance is 75 out of 100 that library card renewals will rise. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public services, d3, p75

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-071 | Level 3 | Answer A

Prompt. A month-ahead forecast for two-factor login for site administrators says the chance is 80 out of 100 that admin account takeovers will fall. What does that percentage mean?

A. About 80 of 100 similar situations would be expected to show the improvement. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d3, p80

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-072 | Level 3 | Answer B

Prompt. A month-ahead forecast for brighter streetlights on Maple Street says the chance is 85 out of 100 that reported thefts will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** This is a likelihood estimate: the result is possible, not certain. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public safety, d3, p85

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-073 | Level 3 | Answer C

Prompt. A month-ahead forecast for peer tutoring for first-year statistics students says the chance is 90 out of 100 that course pass rates will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. In many similar cases, the improvement would happen about 90 out of 100 times. correct	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d3, p90

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-074 | Level 3 | Answer D

Prompt. A month-ahead forecast for calorie labels on restaurant menus says the chance is 15 out of 100 that dessert orders will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** If there were 100 similar forecasts, about 15 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nutrition, d3, p15

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-075 | Level 3 | Answer D

Prompt. A month-ahead forecast for bank overdraft warning texts says the chance is 35 out of 100 that overdraft fees will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The forecast says improvement is possible but not guaranteed: about 35 chances in 100. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, finance, d3, p35

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-076 | Level 3 | Answer C

Prompt. A month-ahead forecast for timed-entry passes for weekend park trails says the chance is 45 out of 100 that trail crowding complaints will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. It leaves room for the result not to happen, because 45% is a chance rather than a promise. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d3, p45

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-077 | Level 3 | Answer B

Prompt. A month-ahead forecast for free Friday museum admission says the chance is 50 out of 100 that family visits will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The number estimates how often this improvement would happen across many similar cases. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, culture, d3, p50

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-078 | Level 3 | Answer A

Prompt. A month-ahead forecast for youth soccer concussion checks says the chance is 20 out of 100 that repeat head injuries will fall. What does that percentage mean?

A. Out of 100 cases like this, roughly 20 would be expected to improve. correct	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, sports, d3, p20

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-079 | Level 3 | Answer D

Prompt. A month-ahead forecast for same-day donation receipts says the chance is 25 out of 100 that donor retention will rise. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** A 25-out-of-100 chance means the result may happen, but it may not. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nonprofit, d3, p25

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-080 | Level 3 | Answer C

Prompt. A month-ahead forecast for warehouse ergonomic training says the chance is 30 out of 100 that back-injury claims will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage describes a chance across repeated similar cases, not a promise for this one. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace safety, d3, p30

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-081 | Level 3 | Answer B

Prompt. A month-ahead forecast for apartment-lobby compost bins says the chance is 40 out of 100 that landfill waste from participating buildings will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** About 40 of 100 similar situations would be expected to show the improvement. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d3, p40

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-082 | Level 3 | Answer A

Prompt. A month-ahead forecast for private-by-default app profiles says the chance is 55 out of 100 that publicly visible profiles will fall. What does that percentage mean?

A. This is a likelihood estimate: the result is possible, not certain. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d3, p55

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-083 | Level 3 | Answer B

Prompt. A month-ahead forecast for same-day clinic appointment slots says the chance is 60 out of 100 that patient no-show rates will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** In many similar cases, the improvement would happen about 60 out of 100 times. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d3, p60

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-084 | Level 3 | Answer A

Prompt. A month-ahead forecast for seat-zone airline boarding says the chance is 65 out of 100 that average boarding time will fall. What does that percentage mean?

A. If there were 100 similar forecasts, about 65 would be expected to improve. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The forecast should be ignored unless it says the chance is 100%. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, travel, d3, p65

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

probability-085 | Level 3 | Answer A

Prompt. A month-ahead forecast for an online apartment repair portal says the chance is 70 out of 100 that unresolved repair requests will fall. What does that percentage mean?

A. The forecast says improvement is possible but not guaranteed: about 70 chances in 100. correct	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, housing, d3, p70

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-086 | Level 3 | Answer B

Prompt. A month-ahead forecast for fruit placement in a school cafeteria line says the chance is 75 out of 100 that fruit purchases will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** It leaves room for the result not to happen, because 75% is a chance rather than a promise. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, food, d3, p75

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-087 | Level 3 | Answer C

Prompt. A month-ahead forecast for weekly call-center script coaching says the chance is 80 out of 100 that customer complaint rates will fall. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The number estimates how often this improvement would happen across many similar cases. correct	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, customer support, d3, p80

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-088 | Level 3 | Answer D

Prompt. A month-ahead forecast for household water-leak alerts says the chance is 85 out of 100 that average household water use will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage tells how many people support the plan, not how likely the result is. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** Out of 100 cases like this, roughly 85 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, utilities, d3, p85

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-089 | Level 3 | Answer A

Prompt. A month-ahead forecast for body-camera activation reminders says the chance is 90 out of 100 that missing-camera-footage reports will fall. What does that percentage mean?

A. A 90-out-of-100 chance means the result may happen, but it may not. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, governance, d3, p90

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-090 | Level 3 | Answer B

Prompt. A month-ahead forecast for county mail-ballot tracking says the chance is 15 out of 100 that phone calls asking ballot status will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The percentage describes a chance across repeated similar cases, not a promise for this one. correct
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, election administration, d3, p15

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-091 | Level 3 | Answer C

Prompt. A month-ahead forecast for language-learning spaced-review prompts says the chance is 35 out of 100 that vocabulary retention quiz scores will rise. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. About 35 of 100 similar situations would be expected to show the improvement. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, learning, d3, p35

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-092 | Level 3 | Answer D

Prompt. A month-ahead forecast for a beginner gym orientation says the chance is 45 out of 100 that new-member cancellations will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** This is a likelihood estimate: the result is possible, not certain. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, fitness, d3, p45

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-093 | Level 3 | Answer C

Prompt. A month-ahead forecast for safe-driving feedback for policyholders says the chance is 50 out of 100 that reported minor crashes will fall. What does that percentage mean?

A. The forecast promises what will happen in this one case, so no other result should be expected. choice	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. In many similar cases, the improvement would happen about 50 out of 100 times. correct	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, insurance, d3, p50

A feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

probability-094 | Level 3 | Answer D

Prompt. A month-ahead forecast for top-of-article correction boxes says the chance is 20 out of 100 that reader trust ratings will rise. What does that percentage mean?

A. The percentage tells how many people support the plan, not how likely the result is. choice	**B.** The forecast promises what will happen in this one case, so no other result should be expected. choice
C. The forecast should be ignored unless it says the chance is 100%. choice	**D.** If there were 100 similar forecasts, about 20 would be expected to improve. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, media, d3, p20

A feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

B feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

C feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-095 | Level 3 | Answer B

Prompt. A month-ahead forecast for clearer farmers market price signs says the chance is 25 out of 100 that price disputes will fall. What does that percentage mean?

A. The forecast should be ignored unless it says the chance is 100%. choice	**B.** The forecast says improvement is possible but not guaranteed: about 25 chances in 100. correct
C. The percentage tells how many people support the plan, not how likely the result is. choice	**D.** The forecast promises what will happen in this one case, so no other result should be expected. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, local commerce, d3, p25

A feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

D feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

probability-096 | Level 3 | Answer A

Prompt. A month-ahead forecast for hotel quiet-hours text reminders says the chance is 30 out of 100 that noise complaints from guest rooms will fall. What does that percentage mean?

A. It leaves room for the result not to happen, because 30% is a chance rather than a promise. correct	**B.** The forecast should be ignored unless it says the chance is 100%. choice
C. The forecast promises what will happen in this one case, so no other result should be expected. choice	**D.** The percentage tells how many people support the plan, not how likely the result is. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, hospitality, d3, p30

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A forecast below 100% can still be useful. Probability is not all-or-nothing.

C feedback (Distractor): Not quite. A forecast gives a chance, not a promise about the single case in front of you.

D feedback (Distractor): Not quite. The percentage is about likelihood, not popularity or approval.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

probability-097 | Level 4 | Answer B

Prompt. A screening tool connected to evening bus service for late-shift workers flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Take the signal seriously, but ask how often this kind of tool is wrong. correct
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, transportation, d4, p55

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-098 | Level 4 | Answer A

Prompt. A screening tool connected to classroom phone lockers flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Update cautiously because a positive signal can still turn out to be a false alarm. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d4, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-099 | Level 4 | Answer D

Prompt. A screening tool connected to medication reminder texts for older patients flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Ignore the signal because some signals are wrong. choice
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Use the signal as a reason to check further, not as proof that the problem is there. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d4, p65

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-100 | Level 4 | Answer C

Prompt. A screening tool connected to a four-day workweek test for software engineers flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Check the base rate and false-alarm rate before treating the signal as strong evidence. correct	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace, d4, p70

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-101 | Level 4 | Answer B

Prompt. A screening tool connected to larger grocery unit-price labels flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** See the signal as evidence to investigate, while remembering that it is not certainty. correct
C. Ignore the signal because some signals are wrong. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, retail, d4, p75

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-102 | Level 4 | Answer A

Prompt. A screening tool connected to late fines on children's books flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Ignore the signal because some signals are wrong. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public services, d4, p80

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-103 | Level 4 | Answer D

Prompt. A screening tool connected to two-factor login for site administrators flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Update cautiously because a positive signal can still turn out to be a false alarm. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d4, p85

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-104 | Level 4 | Answer C

Prompt. A screening tool connected to brighter streetlights on Maple Street flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Use the signal as a reason to check further, not as proof that the problem is there. correct	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-105 | Level 4 | Answer B

Prompt. A screening tool connected to peer tutoring for first-year statistics students flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Check the base rate and false-alarm rate before treating the signal as strong evidence. correct
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d4, p15

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-106 | Level 4 | Answer A

Prompt. A screening tool connected to calorie labels on restaurant menus flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. See the signal as evidence to investigate, while remembering that it is not certainty. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nutrition, d4, p35

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-107 | Level 4 | Answer C

Prompt. A screening tool connected to bank overdraft warning texts flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, finance, d4, p45

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-108 | Level 4 | Answer D

Prompt. A screening tool connected to timed-entry passes for weekend park trails flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Ignore the signal because some signals are wrong. choice	**D.** Update cautiously because a positive signal can still turn out to be a false alarm. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d4, p50

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-109 | Level 4 | Answer A

Prompt. A screening tool connected to free Friday museum admission flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Use the signal as a reason to check further, not as proof that the problem is there. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, culture, d4, p20

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-110 | Level 4 | Answer B

Prompt. A screening tool connected to youth soccer concussion checks flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Check the base rate and false-alarm rate before treating the signal as strong evidence. correct
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-111 | Level 4 | Answer A

Prompt. A screening tool connected to same-day donation receipts flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. See the signal as evidence to investigate, while remembering that it is not certainty. correct	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Ignore the signal because some signals are wrong. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, nonprofit, d4, p30

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-112 | Level 4 | Answer C

Prompt. A screening tool connected to warehouse ergonomic training flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace safety, d4, p40

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-113 | Level 4 | Answer A

Prompt. A screening tool connected to apartment-lobby compost bins flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Update cautiously because a positive signal can still turn out to be a false alarm. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, environment, d4, p55

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-114 | Level 4 | Answer C

Prompt. A screening tool connected to private-by-default app profiles flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Use the signal as a reason to check further, not as proof that the problem is there. correct	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-127 | Level 4 | Answer A

Prompt. A screening tool connected to clearer farmers market price signs flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, local commerce, d4, p30

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-128 | Level 4 | Answer B

Prompt. A screening tool connected to hotel quiet-hours text reminders flags possible problems. It catches many real problems, but it also gives false alarms. The problem is uncommon in the group being screened. What is the best way to treat a positive signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Update cautiously because a positive signal can still turn out to be a false alarm. correct
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, hospitality, d4, p40

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

probability-129 | Level 5 | Answer A

Prompt. A screening tool connected to evening bus service for late-shift workers gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Update cautiously because a positive signal can still turn out to be a false alarm. correct	**B.** Ignore the signal because some signals are wrong. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, transportation, d5, p60

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-130 | Level 5 | Answer B

Prompt. A screening tool connected to classroom phone lockers gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Use the signal as a reason to check further, not as proof that the problem is there. correct
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, education, d5, p65

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-131 | Level 5 | Answer C

Prompt. A screening tool connected to medication reminder texts for older patients gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Ignore the signal because some signals are wrong. choice
C. Check the base rate and false-alarm rate before treating the signal as strong evidence. correct	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, health, d5, p70

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-132 | Level 5 | Answer D

Prompt. A screening tool connected to a four-day workweek test for software engineers gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Ignore the signal because some signals are wrong. choice	**D.** See the signal as evidence to investigate, while remembering that it is not certainty. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, workplace, d5, p75

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-133 | Level 5 | Answer A

Prompt. A screening tool connected to larger grocery unit-price labels gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-134 | Level 5 | Answer B

Prompt. A screening tool connected to late fines on children's books gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Update cautiously because a positive signal can still turn out to be a false alarm. correct
C. Ignore the signal because some signals are wrong. choice	**D.** Look only at the positive signal and ignore how common the problem is in the first place. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is B because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, public services, d5, p85

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

probability-135 | Level 5 | Answer C

Prompt. A screening tool connected to two-factor login for site administrators gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Look only at the positive signal and ignore how common the problem is in the first place. choice	**B.** Ignore the signal because some signals are wrong. choice
C. Use the signal as a reason to check further, not as proof that the problem is there. correct	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, technology, d5, p90

A feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

B feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-136 | Level 5 | Answer D

Prompt. A screening tool connected to brighter streetlights on Maple Street gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Treat the signal as strong enough to act on without any follow-up check. choice	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Ignore the signal because some signals are wrong. choice	**D.** Check the base rate and false-alarm rate before treating the signal as strong evidence. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-149 | Level 5 | Answer A

Prompt. A screening tool connected to an online apartment repair portal gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Update cautiously because a positive signal can still turn out to be a false alarm. correct	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Treat the signal as strong enough to act on without any follow-up check. choice	**D.** Ignore the signal because some signals are wrong. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is A because it treats the number or signal as useful evidence while preserving uncertainty.

Tags: probability, housing, d5, p80

A feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

probability-150 | Level 5 | Answer C

Prompt. A screening tool connected to fruit placement in a school cafeteria line gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Use the signal as a reason to check further, not as proof that the problem is there. correct	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

D feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

probability-153 | Level 5 | Answer C

Prompt. A screening tool connected to body-camera activation reminders gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Look only at the positive signal and ignore how common the problem is in the first place. choice
C. Take the signal seriously, but ask how often this kind of tool is wrong. correct	**D.** Treat the signal as strong enough to act on without any follow-up check. choice

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is C because it treats the number or signal as useful evidence while preserving uncertainty.

A feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

B feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

C feedback (Correct): Correct. This answer treats the number or signal as uncertain evidence. Probability gives a chance or reason to check further, not a guarantee.

D feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

probability-154 | Level 5 | Answer D

Prompt. A screening tool connected to county mail-ballot tracking gives a positive signal for one case. The tool catches many real problems, but false alarms are common, and only a small share of cases have the problem. What is the best way to treat that signal?

A. Ignore the signal because some signals are wrong. choice	**B.** Treat the signal as strong enough to act on without any follow-up check. choice
C. Look only at the positive signal and ignore how common the problem is in the first place. choice	**D.** Update cautiously because a positive signal can still turn out to be a false alarm. correct

Core explanation. Probability is about chance and uncertainty, not guarantees.

Process commentary. To uncover the answer, keep chance separate from certainty. The correct choice is D because it treats the number or signal as useful evidence while preserving uncertainty.

B feedback (Distractor): Not quite. A positive signal can be wrong, so it calls for follow-up rather than automatic action.

C feedback (Distractor): Not quite. Base rates matter. A signal means more when the problem is common than when it is rare.

D feedback (Distractor): Not quite. False alarms mean the signal is not proof, but they do not mean the signal should be ignored.

Skill 11

Use Statistical Sense

What Do the Numbers Say?

Read numbers with the right context. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What does this number mean in context?
Why it matters	Numbers can clarify, but they can also mislead when people ignore denominators, baselines, rates, averages, or the difference between percent and percentage points.
Conceptual core	Statistical sense keeps numbers connected to their denominators, baselines, units, and comparisons. Students should learn that a precise number can still be misleading if the reference point is missing. The central habits are asking compared with what, out of how many, measured how, and over what time period. The goal is not advanced math; it is disciplined interpretation.
Student method	Ask what is being counted, what it is being compared with, and what the denominator is. Never let a large raw number outrun the size of the group it came from.
Analogy	Statistics are like a scale. If you do not know the units or the zero point, the reading can look precise while meaning very little.
Assessment focus	A good answer identifies the missing or correct numerical context: baseline, denominator, comparison group, unit, or time period.

Teaching Sequence

1. Identify the numerator and denominator behind a rate.

2. Ask what the number is being compared with.

3. Separate percent change from percentage-point change.

4. Check whether averages, totals, or selected examples hide variation.

Common Confusions To Watch For

1. Students may think a bigger raw count always means a bigger rate.

2. Students may treat a percentage change as clear without knowing the starting value.

3. Students may ignore whether the comparison groups are the same size.

Teacher Prompts

1. Out of how many?

2. Compared with what baseline?

3. Is this a total, rate, average, percentage, or percentage-point change?

Worked Example

Scenario	A clinic says missed appointments fell by 20 percent after reminder texts, from 100 missed visits per month to 80.
Teacher think-aloud	The 20 percent has a reference point: 20 fewer missed visits compared with the earlier 100. Without the before number, the change would be harder to judge.
Student takeaway	Numbers become meaningful when the comparison and denominator are visible.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A clinic had 100 missed appointments out of 1,000 booked visits in March and 80 out of 800 in April. It advertises: 'Missed appointments fell by 20%, so patients became more reliable.'

What To Do

1. Calculate the percentage change in the number missed: (80 - 100) / 100 x 100.

2. Calculate each month's missed-appointment rate: missed / booked x 100.

3. Write two sentences separating what changed in the count from what changed in the rate, and judge whether the reliability claim follows from these figures.

Check before reading the answer. Did you name the denominator for each month? A lower count does not necessarily mean a lower rate.

Model Answer

The missed count fell by 20%. March's rate is 100/1,000 = 10%; April's is 80/800 = 10%. Fewer appointments were missed, but the proportion missed stayed the same. These figures do not support an improvement in reliability measured by that rate.

Why it is adequate. It calculates both quantities and prevents a true statement about a count from becoming an unsupported statement about a rate.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

statistical_sense-001 | Level 1 | Answer D

Prompt. In a study about evening bus service for late-shift workers, the tracked outcome is late-shift commute complaints. Group A recorded 5 outcome events in 100 observations. Group B recorded 7 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**D.** Group A, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, transportation, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-002 | Level 1 | Answer C

Prompt. In a study about classroom phone lockers, the tracked outcome is classroom disruption reports. Group A recorded 8 outcome events in 300 observations. Group B recorded 6 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-003 | Level 1 | Answer B

Prompt. In a study about medication reminder texts for older patients, the tracked outcome is missed-dose reports. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 9 events is more than 7 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d1

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-004 | Level 1 | Answer A

Prompt. In a study about a four-day workweek test for software engineers, the tracked outcome is staff resignations. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**B.** Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-005 | Level 1 | Answer D

Prompt. In a study about larger grocery unit-price labels, the tracked outcome is shopper overpayment complaints. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 11 events is more than 9 events, so the raw count must decide the rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-006 | Level 1 | Answer C

Prompt. In a study about late fines on children's books, the tracked outcome is library card renewals. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**D.** Group A, because 12 events is more than 10 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public services, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-007 | Level 1 | Answer B

Prompt. In a study about two-factor login for site administrators, the tracked outcome is admin account takeovers. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d1

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-008 | Level 1 | Answer A

Prompt. In a study about brighter streetlights on Maple Street, the tracked outcome is reported thefts. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 14 events is more than 12 events, so the raw count must decide the rate. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public safety, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-009 | Level 1 | Answer D

Prompt. In a study about peer tutoring for first-year statistics students, the tracked outcome is course pass rates. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 6 events is more than 4 events, so the raw count must decide the rate. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-010 | Level 1 | Answer C

Prompt. In a study about calorie labels on restaurant menus, the tracked outcome is dessert orders. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nutrition, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-011 | Level 1 | Answer C

Prompt. In a study about bank overdraft warning texts, the tracked outcome is overdraft fees. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, finance, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-012 | Level 1 | Answer D

Prompt. In a study about timed-entry passes for weekend park trails, the tracked outcome is trail crowding complaints. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-013 | Level 1 | Answer A

Prompt. In a study about free Friday museum admission, the tracked outcome is family visits. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group B, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, culture, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-014 | Level 1 | Answer B

Prompt. In a study about youth soccer concussion checks, the tracked outcome is repeat head injuries. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 11 events is more than 9 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, sports, d1

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-015 | Level 1 | Answer A

Prompt. In a study about same-day donation receipts, the tracked outcome is donor retention. Group A recorded 10 outcome events in 100 observations. Group B recorded 12 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nonprofit, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-016 | Level 1 | Answer C

Prompt. In a study about warehouse ergonomic training, the tracked outcome is back-injury claims. Group A recorded 13 outcome events in 300 observations. Group B recorded 11 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group B, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct	**D.** Group A, because 13 events is more than 11 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace safety, d1

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-017 | Level 1 | Answer A

Prompt. In a study about apartment-lobby compost bins, the tracked outcome is landfill waste from participating buildings. Group A recorded 12 outcome events in 100 observations. Group B recorded 14 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct	**B.** Group B, because 14 events is more than 12 events, so the raw count must decide the rate. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-018 | Level 1 | Answer C

Prompt. In a study about private-by-default app profiles, the tracked outcome is publicly visible profiles. Group A recorded 6 outcome events in 300 observations. Group B recorded 4 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct	**D.** Group A, because 6 events is more than 4 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-019 | Level 1 | Answer A

Prompt. In a study about same-day clinic appointment slots, the tracked outcome is patient no-show rates. Group A recorded 5 outcome events in 100 observations. Group B recorded 7 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group B, because 7 events is more than 5 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-020 | Level 1 | Answer C

Prompt. In a study about seat-zone airline boarding, the tracked outcome is average boarding time. Group A recorded 8 outcome events in 300 observations. Group B recorded 6 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 8 events is more than 6 events, so the raw count must decide the rate. choice
C. Group B, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, travel, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-021 | Level 1 | Answer D

Prompt. In a study about an online apartment repair portal, the tracked outcome is unresolved repair requests. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 9 events is more than 7 events, so the raw count must decide the rate. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, housing, d1

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-022 | Level 1 | Answer B

Prompt. In a study about fruit placement in a school cafeteria line, the tracked outcome is fruit purchases. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**B.** Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, food, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-023 | Level 1 | Answer D

Prompt. In a study about weekly call-center script coaching, the tracked outcome is customer complaint rates. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, customer support, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-024 | Level 1 | Answer C

Prompt. In a study about household water-leak alerts, the tracked outcome is average household water use. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 12 events is more than 10 events, so the raw count must decide the rate. choice	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, utilities, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-025 | Level 1 | Answer D

Prompt. In a study about body-camera activation reminders, the tracked outcome is missing-camera-footage reports. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice	**D.** Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, governance, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-026 | Level 1 | Answer B

Prompt. In a study about county mail-ballot tracking, the tracked outcome is phone calls asking ballot status. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 14 events is more than 12 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, election administration, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-027 | Level 1 | Answer D

Prompt. In a study about language-learning spaced-review prompts, the tracked outcome is vocabulary retention quiz scores. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, learning, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-028 | Level 1 | Answer B

Prompt. In a study about a beginner gym orientation, the tracked outcome is new-member cancellations. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**B.** Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, fitness, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-029 | Level 1 | Answer B

Prompt. In a study about safe-driving feedback for policyholders, the tracked outcome is reported minor crashes. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct
C. Group B, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, insurance, d1

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-030 | Level 1 | Answer A

Prompt. In a study about top-of-article correction boxes, the tracked outcome is reader trust ratings. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 9 events is more than 7 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, media, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-031 | Level 1 | Answer A

Prompt. In a study about clearer farmers market price signs, the tracked outcome is price disputes. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, local commerce, d1

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-032 | Level 1 | Answer B

Prompt. In a study about hotel quiet-hours text reminders, the tracked outcome is noise complaints from guest rooms. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct
C. Group A, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, hospitality, d1

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

statistical_sense-033 | Level 2 | Answer D

Prompt. In a study about evening bus service for late-shift workers, the tracked outcome is late-shift commute complaints. Group A recorded 8 outcome events in 300 observations. Group B recorded 6 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group B, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, transportation, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-034 | Level 2 | Answer A

Prompt. In a study about classroom phone lockers, the tracked outcome is classroom disruption reports. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**B.** Group B, because 9 events is more than 7 events, so the raw count must decide the rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-035 | Level 2 | Answer B

Prompt. In a study about medication reminder texts for older patients, the tracked outcome is missed-dose reports. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct
C. Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d2

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-036 | Level 2 | Answer C

Prompt. In a study about a four-day workweek test for software engineers, the tracked outcome is staff resignations. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-037 | Level 2 | Answer D

Prompt. In a study about larger grocery unit-price labels, the tracked outcome is shopper overpayment complaints. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, retail, d2

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-038 | Level 2 | Answer A

Prompt. In a study about late fines on children's books, the tracked outcome is library card renewals. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct	**B.** Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public services, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-039 | Level 2 | Answer B

Prompt. In a study about two-factor login for site administrators, the tracked outcome is admin account takeovers. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct
C. Group A, because 14 events is more than 12 events, so the raw count must decide the rate. choice	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d2

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-040 | Level 2 | Answer C

Prompt. In a study about brighter streetlights on Maple Street, the tracked outcome is reported thefts. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct	**D.** Group B, because 6 events is more than 4 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public safety, d2

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-041 | Level 2 | Answer B

Prompt. In a study about peer tutoring for first-year statistics students, the tracked outcome is course pass rates. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct
C. Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d2

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-042 | Level 2 | Answer C

Prompt. In a study about calorie labels on restaurant menus, the tracked outcome is dessert orders. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nutrition, d2

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-043 | Level 2 | Answer C

Prompt. In a study about bank overdraft warning texts, the tracked outcome is overdraft fees. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 9 events is more than 7 events, so the raw count must decide the rate. choice
C. Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, finance, d2

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-044 | Level 2 | Answer B

Prompt. In a study about timed-entry passes for weekend park trails, the tracked outcome is trail crowding complaints. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 10 events is more than 8 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-045 | Level 2 | Answer A

Prompt. In a study about free Friday museum admission, the tracked outcome is family visits. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 11 events is more than 9 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, culture, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-046 | Level 2 | Answer D

Prompt. In a study about youth soccer concussion checks, the tracked outcome is repeat head injuries. Group A recorded 10 outcome events in 100 observations. Group B recorded 12 outcome events in 300 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, sports, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-047 | Level 2 | Answer C

Prompt. In a study about same-day donation receipts, the tracked outcome is donor retention. Group A recorded 13 outcome events in 300 observations. Group B recorded 11 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group A, because 13 events is more than 11 events, so the raw count must decide the rate. choice
C. Group B, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nonprofit, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-048 | Level 2 | Answer B

Prompt. In a study about warehouse ergonomic training, the tracked outcome is back-injury claims. Group A recorded 12 outcome events in 100 observations. Group B recorded 14 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace safety, d2

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-049 | Level 2 | Answer A

Prompt. In a study about apartment-lobby compost bins, the tracked outcome is landfill waste from participating buildings. Group A recorded 6 outcome events in 300 observations. Group B recorded 4 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct	**B.** Group A, because 6 events is more than 4 events, so the raw count must decide the rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-050 | Level 2 | Answer D

Prompt. In a study about private-by-default app profiles, the tracked outcome is publicly visible profiles. Group A recorded 5 outcome events in 100 observations. Group B recorded 7 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-051 | Level 2 | Answer A

Prompt. In a study about same-day clinic appointment slots, the tracked outcome is patient no-show rates. Group A recorded 8 outcome events in 300 observations. Group B recorded 6 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group A, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-052 | Level 2 | Answer D

Prompt. In a study about seat-zone airline boarding, the tracked outcome is average boarding time. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group B, because 9 events is more than 7 events, so the raw count must decide the rate. choice	**D.** Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, travel, d2

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-053 | Level 2 | Answer B

Prompt. In a study about an online apartment repair portal, the tracked outcome is unresolved repair requests. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, housing, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-054 | Level 2 | Answer C

Prompt. In a study about fruit placement in a school cafeteria line, the tracked outcome is fruit purchases. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, food, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-055 | Level 2 | Answer D

Prompt. In a study about weekly call-center script coaching, the tracked outcome is customer complaint rates. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, customer support, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-056 | Level 2 | Answer A

Prompt. In a study about household water-leak alerts, the tracked outcome is average household water use. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, utilities, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-057 | Level 2 | Answer B

Prompt. In a study about body-camera activation reminders, the tracked outcome is missing-camera-footage reports. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 14 events is more than 12 events, so the raw count must decide the rate. choice	**B.** Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, governance, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-058 | Level 2 | Answer C

Prompt. In a study about county mail-ballot tracking, the tracked outcome is phone calls asking ballot status. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group B, because 6 events is more than 4 events, so the raw count must decide the rate. choice
C. Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, election administration, d2

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-059 | Level 2 | Answer A

Prompt. In a study about language-learning spaced-review prompts, the tracked outcome is vocabulary retention quiz scores. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**B.** Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, learning, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-060 | Level 2 | Answer C

Prompt. In a study about a beginner gym orientation, the tracked outcome is new-member cancellations. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, fitness, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-061 | Level 2 | Answer D

Prompt. In a study about safe-driving feedback for policyholders, the tracked outcome is reported minor crashes. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 9 events is more than 7 events, so the raw count must decide the rate. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, insurance, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-062 | Level 2 | Answer A

Prompt. In a study about top-of-article correction boxes, the tracked outcome is reader trust ratings. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, media, d2

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-063 | Level 2 | Answer B

Prompt. In a study about clearer farmers market price signs, the tracked outcome is price disputes. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**B.** Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, local commerce, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-064 | Level 2 | Answer D

Prompt. In a study about hotel quiet-hours text reminders, the tracked outcome is noise complaints from guest rooms. Group A recorded 10 outcome events in 100 observations. Group B recorded 12 outcome events in 300 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 12 events is more than 10 events, so the raw count must decide the rate. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, hospitality, d2

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

statistical_sense-065 | Level 3 | Answer B

Prompt. In a study about evening bus service for late-shift workers, the tracked outcome is late-shift commute complaints. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, transportation, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-066 | Level 3 | Answer A

Prompt. In a study about classroom phone lockers, the tracked outcome is classroom disruption reports. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-067 | Level 3 | Answer D

Prompt. In a study about medication reminder texts for older patients, the tracked outcome is missed-dose reports. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-068 | Level 3 | Answer C

Prompt. In a study about a four-day workweek test for software engineers, the tracked outcome is staff resignations. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**D.** Group A, because 12 events is more than 10 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-069 | Level 3 | Answer B

Prompt. In a study about larger grocery unit-price labels, the tracked outcome is shopper overpayment complaints. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice	**B.** Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, retail, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-070 | Level 3 | Answer A

Prompt. In a study about late fines on children's books, the tracked outcome is library card renewals. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct	**B.** Group A, because 14 events is more than 12 events, so the raw count must decide the rate. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public services, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-071 | Level 3 | Answer D

Prompt. In a study about two-factor login for site administrators, the tracked outcome is admin account takeovers. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-072 | Level 3 | Answer C

Prompt. In a study about brighter streetlights on Maple Street, the tracked outcome is reported thefts. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**D.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public safety, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-073 | Level 3 | Answer B

Prompt. In a study about peer tutoring for first-year statistics students, the tracked outcome is course pass rates. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 8 events is more than 6 events, so the raw count must decide the rate. choice	**B.** Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-074 | Level 3 | Answer A

Prompt. In a study about calorie labels on restaurant menus, the tracked outcome is dessert orders. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**B.** Group A, because 9 events is more than 7 events, so the raw count must decide the rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** The raw counts are close enough that dividing by group size is unnecessary. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nutrition, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-075 | Level 3 | Answer C

Prompt. In a study about bank overdraft warning texts, the tracked outcome is overdraft fees. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 10 events is more than 8 events, so the raw count must decide the rate. choice	**B.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, finance, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-076 | Level 3 | Answer D

Prompt. In a study about timed-entry passes for weekend park trails, the tracked outcome is trail crowding complaints. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-077 | Level 3 | Answer A

Prompt. In a study about free Friday museum admission, the tracked outcome is family visits. Group A recorded 10 outcome events in 100 observations. Group B recorded 12 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 12 events is more than 10 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, culture, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-078 | Level 3 | Answer B

Prompt. In a study about youth soccer concussion checks, the tracked outcome is repeat head injuries. Group A recorded 13 outcome events in 300 observations. Group B recorded 11 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group B, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 13 events is more than 11 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, sports, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-079 | Level 3 | Answer C

Prompt. In a study about same-day donation receipts, the tracked outcome is donor retention. Group A recorded 12 outcome events in 100 observations. Group B recorded 14 outcome events in 300 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 14 events is more than 12 events, so the raw count must decide the rate. choice
C. Group A, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nonprofit, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-080 | Level 3 | Answer D

Prompt. In a study about warehouse ergonomic training, the tracked outcome is back-injury claims. Group A recorded 6 outcome events in 300 observations. Group B recorded 4 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 6 events is more than 4 events, so the raw count must decide the rate. choice	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group B, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace safety, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-081 | Level 3 | Answer A

Prompt. In a study about apartment-lobby compost bins, the tracked outcome is landfill waste from participating buildings. Group A recorded 5 outcome events in 100 observations. Group B recorded 7 outcome events in 300 observations. Which group had the higher rate?

A. Group A, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-082 | Level 3 | Answer B

Prompt. In a study about private-by-default app profiles, the tracked outcome is publicly visible profiles. Group A recorded 8 outcome events in 300 observations. Group B recorded 6 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** Group B, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 8 events is more than 6 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-083 | Level 3 | Answer C

Prompt. In a study about same-day clinic appointment slots, the tracked outcome is patient no-show rates. Group A recorded 7 outcome events in 100 observations. Group B recorded 9 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**D.** Group B, because 9 events is more than 7 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-084 | Level 3 | Answer D

Prompt. In a study about seat-zone airline boarding, the tracked outcome is average boarding time. Group A recorded 10 outcome events in 300 observations. Group B recorded 8 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 10 events is more than 8 events, so the raw count must decide the rate. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, travel, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-085 | Level 3 | Answer B

Prompt. In a study about an online apartment repair portal, the tracked outcome is unresolved repair requests. Group A recorded 9 outcome events in 100 observations. Group B recorded 11 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 11 events is more than 9 events, so the raw count must decide the rate. choice	**B.** Group A, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 300 observations is the larger group, so it must have the higher rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, housing, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

statistical_sense-086 | Level 3 | Answer A

Prompt. In a study about fruit placement in a school cafeteria line, the tracked outcome is fruit purchases. Group A recorded 12 outcome events in 300 observations. Group B recorded 10 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 12 events is more than 10 events, so the raw count must decide the rate. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, food, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-087 | Level 3 | Answer D

Prompt. In a study about weekly call-center script coaching, the tracked outcome is customer complaint rates. Group A recorded 11 outcome events in 100 observations. Group B recorded 13 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group B, because 13 events is more than 11 events, so the raw count must decide the rate. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, customer support, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-088 | Level 3 | Answer C

Prompt. In a study about household water-leak alerts, the tracked outcome is average household water use. Group A recorded 14 outcome events in 300 observations. Group B recorded 12 outcome events in 100 observations. Which group had the higher rate?

A. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 12/100 is a higher rate than 14/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, utilities, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-089 | Level 3 | Answer B

Prompt. In a study about body-camera activation reminders, the tracked outcome is missing-camera-footage reports. Group A recorded 4 outcome events in 100 observations. Group B recorded 6 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 4/100 is a higher rate than 6/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group B, because 6 events is more than 4 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, governance, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-090 | Level 3 | Answer A

Prompt. In a study about county mail-ballot tracking, the tracked outcome is phone calls asking ballot status. Group A recorded 7 outcome events in 300 observations. Group B recorded 5 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 5/100 is a higher rate than 7/300; compare rates, not just counts. correct	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** Group A, because 7 events is more than 5 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, election administration, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-091 | Level 3 | Answer D

Prompt. In a study about language-learning spaced-review prompts, the tracked outcome is vocabulary retention quiz scores. Group A recorded 6 outcome events in 100 observations. Group B recorded 8 outcome events in 300 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group A, because 6/100 is a higher rate than 8/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, learning, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-092 | Level 3 | Answer C

Prompt. In a study about a beginner gym orientation, the tracked outcome is new-member cancellations. Group A recorded 9 outcome events in 300 observations. Group B recorded 7 outcome events in 100 observations. Which group had the higher rate?

A. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**B.** Group A, because 300 observations is the larger group, so it must have the higher rate. choice
C. Group B, because 7/100 is a higher rate than 9/300; compare rates, not just counts. correct	**D.** Group A, because 9 events is more than 7 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, fitness, d3

A feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

B feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-093 | Level 3 | Answer B

Prompt. In a study about safe-driving feedback for policyholders, the tracked outcome is reported minor crashes. Group A recorded 8 outcome events in 100 observations. Group B recorded 10 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 300 observations is the larger group, so it must have the higher rate. choice	**B.** Group A, because 8/100 is a higher rate than 10/300; compare rates, not just counts. correct
C. The raw counts are close enough that dividing by group size is unnecessary. choice	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, insurance, d3

A feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-094 | Level 3 | Answer A

Prompt. In a study about top-of-article correction boxes, the tracked outcome is reader trust ratings. Group A recorded 11 outcome events in 300 observations. Group B recorded 9 outcome events in 100 observations. Which group had the higher rate?

A. Group B, because 9/100 is a higher rate than 11/300; compare rates, not just counts. correct	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. There is no fair way to compare rates when group sizes differ, even if both counts are given. choice	**D.** Group A, because 11 events is more than 9 events, so the raw count must decide the rate. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, media, d3

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

D feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

statistical_sense-095 | Level 3 | Answer C

Prompt. In a study about clearer farmers market price signs, the tracked outcome is price disputes. Group A recorded 10 outcome events in 100 observations. Group B recorded 12 outcome events in 300 observations. Which group had the higher rate?

A. Group B, because 12 events is more than 10 events, so the raw count must decide the rate. choice	**B.** The raw counts are close enough that dividing by group size is unnecessary. choice
C. Group A, because 10/100 is a higher rate than 12/300; compare rates, not just counts. correct	**D.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, local commerce, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

statistical_sense-096 | Level 3 | Answer D

Prompt. In a study about hotel quiet-hours text reminders, the tracked outcome is noise complaints from guest rooms. Group A recorded 13 outcome events in 300 observations. Group B recorded 11 outcome events in 100 observations. Which group had the higher rate?

A. The raw counts are close enough that dividing by group size is unnecessary. choice	**B.** There is no fair way to compare rates when group sizes differ, even if both counts are given. choice
C. Group A, because 300 observations is the larger group, so it must have the higher rate. choice	**D.** Group B, because 11/100 is a higher rate than 13/300; compare rates, not just counts. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, hospitality, d3

A feedback (Distractor): Not quite. Raw counts can mislead when group sizes differ. The fair comparison is the rate.

B feedback (Distractor): Not quite. Different group sizes are exactly when rates are useful; the counts and totals are enough to compare.

C feedback (Distractor): Not quite. A bigger group does not automatically have the higher rate. You still have to divide events by observations.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

statistical_sense-097 | Level 4 | Answer D

Prompt. A report about evening bus service for late-shift workers says late-shift commute complaints rose from 8% to 13% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It rose by 5 percentage points, which is about a 63% increase compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, transportation, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-098 | Level 4 | Answer A

Prompt. A report about classroom phone lockers says classroom disruption reports fell from 14% to 9% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 36% decrease compared with the starting number. correct	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-099 | Level 4 | Answer B

Prompt. A report about medication reminder texts for older patients says missed-dose reports rose from 10% to 15% after a test program. What is the clearest way to describe the change?

A. It rose by 15 percentage points, because the ending rate should be copied as the point change. choice	**B.** It rose by 5 percentage points, which is about a 50% increase compared with the starting number. correct
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-100 | Level 4 | Answer C

Prompt. A report about a four-day workweek test for software engineers says staff resignations fell from 16% to 11% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 11 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5 percentage points, which is about a 31% decrease compared with the starting number. correct	**D.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-101 | Level 4 | Answer D

Prompt. A report about larger grocery unit-price labels says shopper overpayment complaints rose from 12% to 17% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It rose by 5 percentage points, which is about a 42% increase compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, retail, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-102 | Level 4 | Answer A

Prompt. A report about late fines on children's books says library card renewals fell from 9% to 4% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 56% decrease compared with the starting number. correct	**B.** It fell by 4 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public services, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-103 | Level 4 | Answer B

Prompt. A report about two-factor login for site administrators says admin account takeovers rose from 5% to 10% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It rose by 5 percentage points, which is about a 100% increase compared with the starting number. correct
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It rose by 10 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-104 | Level 4 | Answer C

Prompt. A report about brighter streetlights on Maple Street says reported thefts fell from 11% to 6% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It fell by 6 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5 percentage points, which is about a 45% decrease compared with the starting number. correct	**D.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public safety, d4

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-105 | Level 4 | Answer B

Prompt. A report about peer tutoring for first-year statistics students says course pass rates rose from 7% to 12% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It rose by 5 percentage points, which is about a 71% increase compared with the starting number. correct
C. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It rose by 12 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d4

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-106 | Level 4 | Answer C

Prompt. A report about calorie labels on restaurant menus says dessert orders fell from 13% to 8% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It fell by 5 percentage points, which is about a 38% decrease compared with the starting number. correct	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nutrition, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-107 | Level 4 | Answer A

Prompt. A report about bank overdraft warning texts says overdraft fees rose from 9% to 14% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 56% increase compared with the starting number. correct	**B.** It rose by 14 percentage points, because the ending rate should be copied as the point change. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, finance, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-108 | Level 4 | Answer C

Prompt. A report about timed-entry passes for weekend park trails says trail crowding complaints fell from 15% to 10% after a test program. What is the clearest way to describe the change?

A. It fell by 10 percentage points, because the ending rate should be copied as the point change. choice	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It fell by 5 percentage points, which is about a 33% decrease compared with the starting number. correct	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-109 | Level 4 | Answer A

Prompt. A report about free Friday museum admission says family visits rose from 11% to 16% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 45% increase compared with the starting number. correct	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 16 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, culture, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-110 | Level 4 | Answer D

Prompt. A report about youth soccer concussion checks says repeat head injuries fell from 17% to 12% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 12 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It fell by 5 percentage points, which is about a 29% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, sports, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-111 | Level 4 | Answer A

Prompt. A report about same-day donation receipts says donor retention rose from 4% to 9% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 125% increase compared with the starting number. correct	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It rose by 9 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nonprofit, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-112 | Level 4 | Answer C

Prompt. A report about warehouse ergonomic training says back-injury claims fell from 10% to 5% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It fell by 5 percentage points, which is about a 50% decrease compared with the starting number. correct	**D.** It fell by 5 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace safety, d4

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-113 | Level 4 | Answer A

Prompt. A report about apartment-lobby compost bins says landfill waste from participating buildings rose from 6% to 11% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 83% increase compared with the starting number. correct	**B.** It rose by 11 percentage points, because the ending rate should be copied as the point change. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-114 | Level 4 | Answer C

Prompt. A report about private-by-default app profiles says publicly visible profiles fell from 12% to 7% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 7 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5 percentage points, which is about a 42% decrease compared with the starting number. correct	**D.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-115 | Level 4 | Answer C

Prompt. A report about same-day clinic appointment slots says patient no-show rates rose from 8% to 13% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It rose by 13 percentage points, because the ending rate should be copied as the point change. choice
C. It rose by 5 percentage points, which is about a 63% increase compared with the starting number. correct	**D.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-116 | Level 4 | Answer B

Prompt. A report about seat-zone airline boarding says average boarding time fell from 14% to 9% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 5 percentage points, which is about a 36% decrease compared with the starting number. correct
C. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It fell by 9 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, travel, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-117 | Level 4 | Answer D

Prompt. A report about an online apartment repair portal says unresolved repair requests rose from 10% to 15% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 5 percentage points, which is about a 50% increase compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, housing, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-118 | Level 4 | Answer A

Prompt. A report about fruit placement in a school cafeteria line says fruit purchases fell from 16% to 11% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 31% decrease compared with the starting number. correct	**B.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, food, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-119 | Level 4 | Answer B

Prompt. A report about weekly call-center script coaching says customer complaint rates rose from 12% to 17% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It rose by 5 percentage points, which is about a 42% increase compared with the starting number. correct
C. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, customer support, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-120 | Level 4 | Answer C

Prompt. A report about household water-leak alerts says average household water use fell from 9% to 4% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by 4 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5 percentage points, which is about a 56% decrease compared with the starting number. correct	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, utilities, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-121 | Level 4 | Answer B

Prompt. A report about body-camera activation reminders says missing-camera-footage reports rose from 5% to 10% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It rose by 5 percentage points, which is about a 100% increase compared with the starting number. correct
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 10 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, governance, d4

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-122 | Level 4 | Answer D

Prompt. A report about county mail-ballot tracking says phone calls asking ballot status fell from 11% to 6% after a test program. What is the clearest way to describe the change?

A. It fell by 6 percentage points, because the ending rate should be copied as the point change. choice	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 5 percentage points, which is about a 45% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, election administration, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-123 | Level 4 | Answer B

Prompt. A report about language-learning spaced-review prompts says vocabulary retention quiz scores rose from 7% to 12% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It rose by 5 percentage points, which is about a 71% increase compared with the starting number. correct
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 12 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, learning, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-124 | Level 4 | Answer D

Prompt. A report about a beginner gym orientation says new-member cancellations fell from 13% to 8% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 8 percentage points, because the ending rate should be copied as the point change. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 5 percentage points, which is about a 38% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, fitness, d4

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-125 | Level 4 | Answer B

Prompt. A report about safe-driving feedback for policyholders says reported minor crashes rose from 9% to 14% after a test program. What is the clearest way to describe the change?

A. It rose by 14 percentage points, because the ending rate should be copied as the point change. choice	**B.** It rose by 5 percentage points, which is about a 56% increase compared with the starting number. correct
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, insurance, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-126 | Level 4 | Answer D

Prompt. A report about top-of-article correction boxes says reader trust ratings fell from 15% to 10% after a test program. What is the clearest way to describe the change?

A. It fell by 10 percentage points, because the ending rate should be copied as the point change. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It fell by 5 percentage points, which is about a 33% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, media, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-127 | Level 4 | Answer A

Prompt. A report about clearer farmers market price signs says price disputes rose from 11% to 16% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 45% increase compared with the starting number. correct	**B.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It rose by 16 percentage points, because the ending rate should be copied as the point change. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, local commerce, d4

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-128 | Level 4 | Answer D

Prompt. A report about hotel quiet-hours text reminders says noise complaints from guest rooms fell from 17% to 12% after a test program. What is the clearest way to describe the change?

A. It fell by 12 percentage points, because the ending rate should be copied as the point change. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It fell by 5 percentage points, which is about a 29% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, hospitality, d4

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

statistical_sense-129 | Level 5 | Answer B

Prompt. A report about evening bus service for late-shift workers says late-shift commute complaints fell from 14% to 9% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 5 percentage points, which is about a 36% decrease compared with the starting number. correct
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 9 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, transportation, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-130 | Level 5 | Answer A

Prompt. A report about classroom phone lockers says classroom disruption reports rose from 10% to 15% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 50% increase compared with the starting number. correct	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 15 percentage points, because the ending rate should be copied as the point change. choice	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-131 | Level 5 | Answer D

Prompt. A report about medication reminder texts for older patients says missed-dose reports fell from 16% to 11% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by 11 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It fell by 5 percentage points, which is about a 31% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-132 | Level 5 | Answer C

Prompt. A report about a four-day workweek test for software engineers says staff resignations rose from 12% to 17% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5 percentage points, which is about a 42% increase compared with the starting number. correct	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-133 | Level 5 | Answer B

Prompt. A report about larger grocery unit-price labels says shopper overpayment complaints fell from 9% to 4% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by 5 percentage points, which is about a 56% decrease compared with the starting number. correct
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 4 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, retail, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-134 | Level 5 | Answer A

Prompt. A report about late fines on children's books says library card renewals rose from 5% to 10% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 100% increase compared with the starting number. correct	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public services, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-135 | Level 5 | Answer D

Prompt. A report about two-factor login for site administrators says admin account takeovers fell from 11% to 6% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by 6 percentage points, because the ending rate should be copied as the point change. choice	**D.** It fell by 5 percentage points, which is about a 45% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-136 | Level 5 | Answer C

Prompt. A report about brighter streetlights on Maple Street says reported thefts rose from 7% to 12% after a test program. What is the clearest way to describe the change?

A. It rose by 12 percentage points, because the ending rate should be copied as the point change. choice	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It rose by 5 percentage points, which is about a 71% increase compared with the starting number. correct	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, public safety, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-137 | Level 5 | Answer D

Prompt. A report about peer tutoring for first-year statistics students says course pass rates fell from 13% to 8% after a test program. What is the clearest way to describe the change?

A. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 5 percentage points, which is about a 38% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, education, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-138 | Level 5 | Answer C

Prompt. A report about calorie labels on restaurant menus says dessert orders rose from 9% to 14% after a test program. What is the clearest way to describe the change?

A. It rose by 14 percentage points, because the ending rate should be copied as the point change. choice	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It rose by 5 percentage points, which is about a 56% increase compared with the starting number. correct	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nutrition, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-139 | Level 5 | Answer C

Prompt. A report about bank overdraft warning texts says overdraft fees fell from 15% to 10% after a test program. What is the clearest way to describe the change?

A. It fell by 10 percentage points, because the ending rate should be copied as the point change. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by 5 percentage points, which is about a 33% decrease compared with the starting number. correct	**D.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, finance, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-140 | Level 5 | Answer D

Prompt. A report about timed-entry passes for weekend park trails says trail crowding complaints rose from 11% to 16% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It rose by 16 percentage points, because the ending rate should be copied as the point change. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 5 percentage points, which is about a 45% increase compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-141 | Level 5 | Answer A

Prompt. A report about free Friday museum admission says family visits fell from 17% to 12% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 29% decrease compared with the starting number. correct	**B.** It fell by 12 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, culture, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-142 | Level 5 | Answer B

Prompt. A report about youth soccer concussion checks says repeat head injuries rose from 4% to 9% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It rose by 5 percentage points, which is about a 125% increase compared with the starting number. correct
C. It rose by 9 percentage points, because the ending rate should be copied as the point change. choice	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, sports, d5

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-143 | Level 5 | Answer C

Prompt. A report about same-day donation receipts says donor retention fell from 10% to 5% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by 5 percentage points, which is about a 50% decrease compared with the starting number. correct	**D.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, nonprofit, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-144 | Level 5 | Answer D

Prompt. A report about warehouse ergonomic training says back-injury claims rose from 6% to 11% after a test program. What is the clearest way to describe the change?

A. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 11 percentage points, because the ending rate should be copied as the point change. choice	**D.** It rose by 5 percentage points, which is about a 83% increase compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, workplace safety, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-145 | Level 5 | Answer A

Prompt. A report about apartment-lobby compost bins says landfill waste from participating buildings fell from 12% to 7% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 42% decrease compared with the starting number. correct	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, environment, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-146 | Level 5 | Answer B

Prompt. A report about private-by-default app profiles says publicly visible profiles rose from 8% to 13% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It rose by 5 percentage points, which is about a 63% increase compared with the starting number. correct
C. It rose by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It rose by 13 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, technology, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-147 | Level 5 | Answer A

Prompt. A report about same-day clinic appointment slots says patient no-show rates fell from 14% to 9% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 36% decrease compared with the starting number. correct	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by 9 percentage points, because the ending rate should be copied as the point change. choice	**D.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, health, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-148 | Level 5 | Answer B

Prompt. A report about seat-zone airline boarding says average boarding time rose from 10% to 15% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It rose by 5 percentage points, which is about a 50% increase compared with the starting number. correct
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, travel, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-149 | Level 5 | Answer D

Prompt. A report about an online apartment repair portal says unresolved repair requests fell from 16% to 11% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It fell by 5 percentage points, which is about a 31% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, housing, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-150 | Level 5 | Answer C

Prompt. A report about fruit placement in a school cafeteria line says fruit purchases rose from 12% to 17% after a test program. What is the clearest way to describe the change?

A. It rose by 17 percentage points, because the ending rate should be copied as the point change. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5 percentage points, which is about a 42% increase compared with the starting number. correct	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, food, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-151 | Level 5 | Answer B

Prompt. A report about weekly call-center script coaching says customer complaint rates fell from 9% to 4% after a test program. What is the clearest way to describe the change?

A. It fell by 4 percentage points, because the ending rate should be copied as the point change. choice	**B.** It fell by 5 percentage points, which is about a 56% decrease compared with the starting number. correct
C. It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, customer support, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-152 | Level 5 | Answer A

Prompt. A report about household water-leak alerts says average household water use rose from 5% to 10% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 100% increase compared with the starting number. correct	**B.** It rose by 10 percentage points, because the ending rate should be copied as the point change. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, utilities, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-153 | Level 5 | Answer D

Prompt. A report about body-camera activation reminders says missing-camera-footage reports fell from 11% to 6% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It fell by 5 percentage points, which is about a 45% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, governance, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-154 | Level 5 | Answer C

Prompt. A report about county mail-ballot tracking says phone calls asking ballot status rose from 7% to 12% after a test program. What is the clearest way to describe the change?

A. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5 percentage points, which is about a 71% increase compared with the starting number. correct	**D.** It rose by 5%, because a 5-point change and a 5% change are the same thing. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, election administration, d5

A feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

statistical_sense-155 | Level 5 | Answer A

Prompt. A report about language-learning spaced-review prompts says vocabulary retention quiz scores fell from 13% to 8% after a test program. What is the clearest way to describe the change?

A. It fell by 5 percentage points, which is about a 38% decrease compared with the starting number. correct	**B.** It fell by 5%, because a 5-point change and a 5% change are the same thing. choice
C. It fell by 8 percentage points, because the ending rate should be copied as the point change. choice	**D.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, learning, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

statistical_sense-156 | Level 5 | Answer C

Prompt. A report about a beginner gym orientation says new-member cancellations rose from 9% to 14% after a test program. What is the clearest way to describe the change?

A. It rose by 14 percentage points, because the ending rate should be copied as the point change. choice	**B.** It cannot be described without knowing the total population, even though the starting and ending rates are given. choice
C. It rose by 5 percentage points, which is about a 56% increase compared with the starting number. correct	**D.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is C because it reads the quantity in the right context.

Tags: statistical_sense, statistics, fitness, d5

A feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

B feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

C feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-157 | Level 5 | Answer B

Prompt. A report about safe-driving feedback for policyholders says reported minor crashes fell from 15% to 10% after a test program. What is the clearest way to describe the change?

A. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**B.** It fell by 5 percentage points, which is about a 33% decrease compared with the starting number. correct
C. It fell by 10 percentage points, because the ending rate should be copied as the point change. choice	**D.** It fell by about 5% compared with the ending number, because the final rate is the only number that matters. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, insurance, d5

A feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

D feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

statistical_sense-158 | Level 5 | Answer A

Prompt. A report about top-of-article correction boxes says reader trust ratings rose from 11% to 16% after a test program. What is the clearest way to describe the change?

A. It rose by 5 percentage points, which is about a 45% increase compared with the starting number. correct	**B.** It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice
C. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**D.** It rose by 16 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is A because it reads the quantity in the right context.

Tags: statistical_sense, statistics, media, d5

A feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

B feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

C feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

statistical_sense-159 | Level 5 | Answer D

Prompt. A report about clearer farmers market price signs says price disputes fell from 17% to 12% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It fell by 12 percentage points, because the ending rate should be copied as the point change. choice
C. It fell by 5%, because a 5-point change and a 5% change are the same thing. choice	**D.** It fell by 5 percentage points, which is about a 29% decrease compared with the starting number. correct

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is D because it reads the quantity in the right context.

Tags: statistical_sense, statistics, local commerce, d5

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

C feedback (Distractor): Not quite. Percentage points and percent change are different; the starting value matters for percent change.

D feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

statistical_sense-160 | Level 5 | Answer B

Prompt. A report about hotel quiet-hours text reminders says noise complaints from guest rooms rose from 4% to 9% after a test program. What is the clearest way to describe the change?

A. It cannot be described without knowing the total population, even though the starting and ending rates are given. choice	**B.** It rose by 5 percentage points, which is about a 125% increase compared with the starting number. correct
C. It rose by about 5% compared with the ending number, because the final rate is the only number that matters. choice	**D.** It rose by 9 percentage points, because the ending rate should be copied as the point change. choice

Core explanation. For numbers, pay attention to group size and to the difference between percentage points and percent change.

Process commentary. To uncover the answer, identify the denominator, baseline, rate, or comparison that makes the number meaningful. The correct choice is B because it reads the quantity in the right context.

Tags: statistical_sense, statistics, hospitality, d5

A feedback (Distractor): Not quite. The starting and ending rates are enough to describe this change.

B feedback (Correct): Correct. This answer reads the numbers with the right comparison. For numbers, pay attention to group size and to the difference between percentage points and percent change.

C feedback (Distractor): Not quite. Percent change compares the movement with the starting value, not only the final value.

D feedback (Distractor): Not quite. Percentage points are found by subtracting the starting rate from the ending rate, not by copying the ending value.

Skill 12

Separate Correlation and Causation

Cause or Coincidence?

Explain why a cause claim is not proven yet. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Has the argument shown that one thing caused another?
Why it matters	Cause claims are powerful because they suggest action. They also require discipline: timing, correlation, or improvement after a plan is not enough by itself.
Conceptual core	Causal claims are attractive because they suggest a lever for action. Students should learn that timing and correlation are clues, not proof. A responsible causal judgment asks about comparison groups, other changes, selection effects, reverse direction, and plausible mechanisms. This skill slows the leap from after this to because of this.
Student method	Look for another change that happened at the same time, a missing comparison group, reverse direction, selection effects, or a reason the result might have changed anyway.
Analogy	Causation is a courtroom claim. A suspect being near the scene matters, but it is not a conviction without ruling out other explanations.
Assessment focus	A good answer explains why the cause is not yet proven or identifies evidence that would better test the causal link.

Teaching Sequence

1. Check whether the alleged cause happened before the effect.

2. Ask what else changed at the same time.

3. Look for a comparison group or baseline trend.

4. Consider whether the effect could have influenced the supposed cause.

Common Confusions To Watch For

1. Students may assume that improvement after a plan proves the plan caused it.

2. Students may treat correlation as useless rather than as a clue that needs testing.

3. Students may ignore selection effects when people choose into a program.

Teacher Prompts

1. What would we need to compare?

2. What else could have changed?

3. Could the cause and effect be reversed or both caused by a third factor?

Worked Example

Scenario	Reported thefts drop after brighter streetlights are installed, but the city also increases evening patrols that month.
Teacher think-aloud	The drop is compatible with the lights helping, but patrols are a rival cause. A better design would compare similar streets with and without the lighting change while tracking patrol changes.
Student takeaway	A causal claim gets stronger when rival causes are ruled out.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. Reported thefts on a street fall from 50 in September to 35 in October. Brighter lights are installed at the start of October, and extra evening patrols begin that same day. The mayor says the lights caused the drop.

What To Do

1. State the observed change separately from the mayor's causal explanation.

2. Name the other change that could explain some or all of the drop.

3. Propose a comparison that would help separate the effects: describe which streets to compare and which other condition should be kept similar. Do not claim your proposed comparison has already been done.

Check before reading the answer. Does the comparison vary lighting without also giving only the newly lit streets extra patrols?

Model Answer

The observation is that reports fell from 50 to 35 after two changes. Extra patrols are a rival explanation. Compare similar streets over the same period, some receiving brighter lights and others retaining existing lights, while keeping patrol levels comparable; random assignment of lighting would make the test stronger where feasible.

Why it is adequate. It identifies the simultaneous change and proposes evidence that could distinguish explanations instead of treating 'after' as 'because of'.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

causation-001 | Level 1 | Answer A

Prompt. The city council tried a plan to extend evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct	**B.** The new buses were repainted blue. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, transportation, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-002 | Level 1 | Answer B

Prompt. The school board tried a plan to require phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The lockers are installed near the gym. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-003 | Level 1 | Answer C

Prompt. The hospital tried a plan to send medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The text messages use a green pill icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-004 | Level 1 | Answer D

Prompt. The company tried a plan to test a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The test calendar starts on a Monday. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-005 | Level 1 | Answer D

Prompt. The grocery chain tried a plan to add larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The shelf labels use bold black numbers. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, retail, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-006 | Level 1 | Answer B

Prompt. The library tried a plan to waive late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The children's-book checkout desk moved six feet. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public services, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-007 | Level 1 | Answer A

Prompt. The platform tried a plan to require two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The login button changed from green to blue. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-008 | Level 1 | Answer B

Prompt. The neighborhood association tried a plan to add brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The new light poles are made of aluminum. That visible detail describes the setting but does not identify a competing cause. choice	**B.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public safety, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-009 | Level 1 | Answer C

Prompt. The university tried a plan to expand peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The tutoring room has new chairs. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The final exam was also shortened; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-010 | Level 1 | Answer D

Prompt. The restaurant group tried a plan to show calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The lunch menus are printed on thicker paper. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nutrition, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-011 | Level 1 | Answer D

Prompt. The bank tried a plan to send overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The warning texts arrive from a short code. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, finance, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-012 | Level 1 | Answer C

Prompt. The park service tried a plan to use timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The digital passes include a small trail map. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-013 | Level 1 | Answer B

Prompt. The museum tried a plan to offer free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The Friday tickets are scanned at the east door. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, culture, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-014 | Level 1 | Answer A

Prompt. The sports league tried a plan to add mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The league also shortened the season; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The concussion checklist is printed on yellow paper. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, sports, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-015 | Level 1 | Answer D

Prompt. The nonprofit tried a plan to send donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The receipt email subject line changed. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nonprofit, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-016 | Level 1 | Answer C

Prompt. The warehouse tried a plan to offer monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**D.** The training room has a ceiling-mounted projector. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace safety, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-017 | Level 1 | Answer B

Prompt. The city sanitation office tried a plan to place compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct
C. The lobby compost bins have foot pedals. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-018 | Level 1 | Answer A

Prompt. The app maker tried a plan to make new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**B.** The privacy screen uses a shield icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-019 | Level 1 | Answer D

Prompt. The clinic tried a plan to reserve same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The appointment cards are white. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The clinic also began reminder calls; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-020 | Level 1 | Answer C

Prompt. The airline tried a plan to board passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**D.** The gate signs are backlit. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, travel, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-021 | Level 1 | Answer C

Prompt. The landlord tried a plan to launch an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**D.** The repair portal uses a house logo. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, housing, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-022 | Level 1 | Answer D

Prompt. The cafeteria tried a plan to move fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The fruit bowls are ceramic. That visible detail describes the setting but does not identify a competing cause. choice	**D.** A fruit discount started that week; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, food, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-023 | Level 1 | Answer A

Prompt. The call center tried a plan to give support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The coaching slides use blue headers. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, customer support, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-024 | Level 1 | Answer B

Prompt. The water utility tried a plan to send automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** A rainy season began during the study; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The water-leak alert screen includes a blue droplet icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, utilities, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-025 | Level 1 | Answer C

Prompt. The police department tried a plan to send body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**D.** The reminder tone is two beeps. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, governance, d1

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-026 | Level 1 | Answer D

Prompt. The election office tried a plan to offer online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The ballot-tracking page uses county colors. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, election administration, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-027 | Level 1 | Answer A

Prompt. The tutoring app tried a plan to send spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The review prompts use a bell icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, learning, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-028 | Level 1 | Answer B

Prompt. The gym tried a plan to offer a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The orientation mats are black. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, fitness, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-029 | Level 1 | Answer A

Prompt. The insurer tried a plan to send weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**B.** The feedback dashboard uses star ratings. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, insurance, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-030 | Level 1 | Answer B

Prompt. The newsroom tried a plan to place corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The correction box has a gray border. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, media, d1

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-031 | Level 1 | Answer A

Prompt. The farmers market tried a plan to require clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The market also added a weekend help desk; that happened during the same period and could also explain the change. correct	**B.** The stall price signs are laminated. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, local commerce, d1

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-032 | Level 1 | Answer C

Prompt. The hotel tried a plan to send quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The quiet-hours text reminder uses a small moon icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, hospitality, d1

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

causation-033 | Level 2 | Answer B

Prompt. The city council tried a plan to extend evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The new buses were repainted blue. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, transportation, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-034 | Level 2 | Answer A

Prompt. The school board tried a plan to require phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct	**B.** The lockers are installed near the gym. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-035 | Level 2 | Answer D

Prompt. The hospital tried a plan to send medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The text messages use a green pill icon. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-036 | Level 2 | Answer C

Prompt. The company tried a plan to test a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The test calendar starts on a Monday. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-037 | Level 2 | Answer B

Prompt. The grocery chain tried a plan to add larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The shelf labels use bold black numbers. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, retail, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-038 | Level 2 | Answer A

Prompt. The library tried a plan to waive late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The library also opened on Sundays; that happened during the same period and could also explain the change. correct	**B.** The children's-book checkout desk moved six feet. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public services, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-039 | Level 2 | Answer D

Prompt. The platform tried a plan to require two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The login button changed from green to blue. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-040 | Level 2 | Answer C

Prompt. The neighborhood association tried a plan to add brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The new light poles are made of aluminum. That visible detail describes the setting but does not identify a competing cause. choice
C. Police patrols increased during the same period; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public safety, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-041 | Level 2 | Answer B

Prompt. The university tried a plan to expand peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The final exam was also shortened; that happened during the same period and could also explain the change. correct
C. The tutoring room has new chairs. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-042 | Level 2 | Answer A

Prompt. The restaurant group tried a plan to show calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The lunch menus are printed on thicker paper. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nutrition, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-043 | Level 2 | Answer C

Prompt. The bank tried a plan to send overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct	**D.** The warning texts arrive from a short code. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, finance, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-044 | Level 2 | Answer D

Prompt. The park service tried a plan to use timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The digital passes include a small trail map. That visible detail describes the setting but does not identify a competing cause. choice	**D.** A nearby trail reopened that month; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-045 | Level 2 | Answer A

Prompt. The museum tried a plan to offer free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct	**B.** The Friday tickets are scanned at the east door. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, culture, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-046 | Level 2 | Answer B

Prompt. The sports league tried a plan to add mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The league also shortened the season; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The concussion checklist is printed on yellow paper. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, sports, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-047 | Level 2 | Answer C

Prompt. The nonprofit tried a plan to send donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The receipt email subject line changed. That visible detail describes the setting but does not identify a competing cause. choice
C. The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nonprofit, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-048 | Level 2 | Answer D

Prompt. The warehouse tried a plan to offer monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The training room has a ceiling-mounted projector. That visible detail describes the setting but does not identify a competing cause. choice	**D.** New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace safety, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-049 | Level 2 | Answer A

Prompt. The city sanitation office tried a plan to place compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The lobby compost bins have foot pedals. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-050 | Level 2 | Answer B

Prompt. The app maker tried a plan to make new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The privacy screen uses a shield icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-051 | Level 2 | Answer C

Prompt. The clinic tried a plan to reserve same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The clinic also began reminder calls; that happened during the same period and could also explain the change. correct	**D.** The appointment cards are white. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-052 | Level 2 | Answer D

Prompt. The airline tried a plan to board passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The gate signs are backlit. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, travel, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-053 | Level 2 | Answer D

Prompt. The landlord tried a plan to launch an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The repair portal uses a house logo. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, housing, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-054 | Level 2 | Answer C

Prompt. The cafeteria tried a plan to move fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. A fruit discount started that week; that happened during the same period and could also explain the change. correct	**D.** The fruit bowls are ceramic. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, food, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-055 | Level 2 | Answer B

Prompt. The call center tried a plan to give support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The coaching slides use blue headers. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The call queue was also shortened; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, customer support, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-056 | Level 2 | Answer A

Prompt. The water utility tried a plan to send automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. A rainy season began during the study; that happened during the same period and could also explain the change. correct	**B.** The water-leak alert screen includes a blue droplet icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, utilities, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-057 | Level 2 | Answer D

Prompt. The police department tried a plan to send body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The reminder tone is two beeps. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, governance, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-058 | Level 2 | Answer C

Prompt. The election office tried a plan to offer online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The ballot-tracking page uses county colors. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The office also expanded its phone staff; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, election administration, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-059 | Level 2 | Answer A

Prompt. The tutoring app tried a plan to send spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The review prompts use a bell icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, learning, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-060 | Level 2 | Answer C

Prompt. The gym tried a plan to offer a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The gym also discounted annual plans; that happened during the same period and could also explain the change. correct	**D.** The orientation mats are black. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, fitness, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-061 | Level 2 | Answer B

Prompt. The insurer tried a plan to send weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The feedback dashboard uses star ratings. That visible detail describes the setting but does not identify a competing cause. choice	**B.** Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, insurance, d2

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-062 | Level 2 | Answer A

Prompt. The newsroom tried a plan to place corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The correction box has a gray border. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, media, d2

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-063 | Level 2 | Answer D

Prompt. The farmers market tried a plan to require clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The stall price signs are laminated. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, local commerce, d2

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-064 | Level 2 | Answer B

Prompt. The hotel tried a plan to send quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The hotel also changed room assignments; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The quiet-hours text reminder uses a small moon icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, hospitality, d2

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

causation-065 | Level 3 | Answer A

Prompt. The city council tried a plan to extend evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct	**B.** The new buses were repainted blue. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, transportation, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-066 | Level 3 | Answer B

Prompt. The school board tried a plan to require phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The lockers are installed near the gym. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-067 | Level 3 | Answer C

Prompt. The hospital tried a plan to send medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The text messages use a green pill icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-068 | Level 3 | Answer D

Prompt. The company tried a plan to test a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The test calendar starts on a Monday. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-069 | Level 3 | Answer A

Prompt. The grocery chain tried a plan to add larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The shelf labels use bold black numbers. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, retail, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-070 | Level 3 | Answer B

Prompt. The library tried a plan to waive late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The children's-book checkout desk moved six feet. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public services, d3

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-071 | Level 3 | Answer C

Prompt. The platform tried a plan to require two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The login button changed from green to blue. That visible detail describes the setting but does not identify a competing cause. choice
C. Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-072 | Level 3 | Answer D

Prompt. The neighborhood association tried a plan to add brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The new light poles are made of aluminum. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public safety, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-073 | Level 3 | Answer A

Prompt. The university tried a plan to expand peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The final exam was also shortened; that happened during the same period and could also explain the change. correct	**B.** The tutoring room has new chairs. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-074 | Level 3 | Answer B

Prompt. The restaurant group tried a plan to show calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The lunch menus are printed on thicker paper. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nutrition, d3

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-075 | Level 3 | Answer D

Prompt. The bank tried a plan to send overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The warning texts arrive from a short code. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, finance, d3

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-076 | Level 3 | Answer C

Prompt. The park service tried a plan to use timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The digital passes include a small trail map. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-077 | Level 3 | Answer B

Prompt. The museum tried a plan to offer free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct
C. The Friday tickets are scanned at the east door. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, culture, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-078 | Level 3 | Answer A

Prompt. The sports league tried a plan to add mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The league also shortened the season; that happened during the same period and could also explain the change. correct	**B.** The concussion checklist is printed on yellow paper. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, sports, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-079 | Level 3 | Answer D

Prompt. The nonprofit tried a plan to send donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The receipt email subject line changed. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nonprofit, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-080 | Level 3 | Answer B

Prompt. The warehouse tried a plan to offer monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The training room has a ceiling-mounted projector. That visible detail describes the setting but does not identify a competing cause. choice	**B.** New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace safety, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-081 | Level 3 | Answer D

Prompt. The city sanitation office tried a plan to place compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The lobby compost bins have foot pedals. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-082 | Level 3 | Answer B

Prompt. The app maker tried a plan to make new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The privacy screen uses a shield icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-083 | Level 3 | Answer B

Prompt. The clinic tried a plan to reserve same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The clinic also began reminder calls; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The appointment cards are white. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-084 | Level 3 | Answer D

Prompt. The airline tried a plan to board passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The gate signs are backlit. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, travel, d3

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-085 | Level 3 | Answer C

Prompt. The landlord tried a plan to launch an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**D.** The repair portal uses a house logo. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, housing, d3

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-086 | Level 3 | Answer A

Prompt. The cafeteria tried a plan to move fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. A fruit discount started that week; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The fruit bowls are ceramic. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, food, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-087 | Level 3 | Answer A

Prompt. The call center tried a plan to give support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The coaching slides use blue headers. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, customer support, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-088 | Level 3 | Answer B

Prompt. The water utility tried a plan to send automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The water-leak alert screen includes a blue droplet icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A rainy season began during the study; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, utilities, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-089 | Level 3 | Answer A

Prompt. The police department tried a plan to send body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**B.** The reminder tone is two beeps. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, governance, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-090 | Level 3 | Answer C

Prompt. The election office tried a plan to offer online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The ballot-tracking page uses county colors. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The office also expanded its phone staff; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, election administration, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-091 | Level 3 | Answer A

Prompt. The tutoring app tried a plan to send spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**B.** The review prompts use a bell icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, learning, d3

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-092 | Level 3 | Answer C

Prompt. The gym tried a plan to offer a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The orientation mats are black. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The gym also discounted annual plans; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, fitness, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-093 | Level 3 | Answer C

Prompt. The insurer tried a plan to send weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The feedback dashboard uses star ratings. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, insurance, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-094 | Level 3 | Answer D

Prompt. The newsroom tried a plan to place corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The correction box has a gray border. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, media, d3

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-095 | Level 3 | Answer D

Prompt. The farmers market tried a plan to require clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The stall price signs are laminated. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, local commerce, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-096 | Level 3 | Answer C

Prompt. The hotel tried a plan to send quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The quiet-hours text reminder uses a small moon icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, hospitality, d3

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

causation-097 | Level 4 | Answer D

Prompt. The city council tried a plan to extend evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The new buses were repainted blue. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, transportation, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-098 | Level 4 | Answer B

Prompt. The school board tried a plan to require phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct
C. The lockers are installed near the gym. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-099 | Level 4 | Answer D

Prompt. The hospital tried a plan to send medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The text messages use a green pill icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-100 | Level 4 | Answer B

Prompt. The company tried a plan to test a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct
C. The test calendar starts on a Monday. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-101 | Level 4 | Answer D

Prompt. The grocery chain tried a plan to add larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The shelf labels use bold black numbers. That visible detail describes the setting but does not identify a competing cause. choice	**D.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, retail, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-102 | Level 4 | Answer B

Prompt. The library tried a plan to waive late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The children's-book checkout desk moved six feet. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public services, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-103 | Level 4 | Answer D

Prompt. The platform tried a plan to require two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The login button changed from green to blue. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-104 | Level 4 | Answer B

Prompt. The neighborhood association tried a plan to add brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The new light poles are made of aluminum. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public safety, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-105 | Level 4 | Answer D

Prompt. The university tried a plan to expand peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The tutoring room has new chairs. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The final exam was also shortened; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-106 | Level 4 | Answer B

Prompt. The restaurant group tried a plan to show calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The lunch menus are printed on thicker paper. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nutrition, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-107 | Level 4 | Answer C

Prompt. The bank tried a plan to send overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The warning texts arrive from a short code. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, finance, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-108 | Level 4 | Answer A

Prompt. The park service tried a plan to use timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**B.** The digital passes include a small trail map. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-109 | Level 4 | Answer C

Prompt. The museum tried a plan to offer free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The Friday tickets are scanned at the east door. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, culture, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-110 | Level 4 | Answer A

Prompt. The sports league tried a plan to add mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The league also shortened the season; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The concussion checklist is printed on yellow paper. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, sports, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-111 | Level 4 | Answer C

Prompt. The nonprofit tried a plan to send donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The receipt email subject line changed. That visible detail describes the setting but does not identify a competing cause. choice
C. The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nonprofit, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-112 | Level 4 | Answer A

Prompt. The warehouse tried a plan to offer monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The training room has a ceiling-mounted projector. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace safety, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-113 | Level 4 | Answer C

Prompt. The city sanitation office tried a plan to place compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct	**D.** The lobby compost bins have foot pedals. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-114 | Level 4 | Answer A

Prompt. The app maker tried a plan to make new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The privacy screen uses a shield icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-115 | Level 4 | Answer C

Prompt. The clinic tried a plan to reserve same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The appointment cards are white. That visible detail describes the setting but does not identify a competing cause. choice
C. The clinic also began reminder calls; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-116 | Level 4 | Answer A

Prompt. The airline tried a plan to board passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The gate signs are backlit. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, travel, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-117 | Level 4 | Answer C

Prompt. The landlord tried a plan to launch an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**D.** The repair portal uses a house logo. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, housing, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-118 | Level 4 | Answer B

Prompt. The cafeteria tried a plan to move fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The fruit bowls are ceramic. That visible detail describes the setting but does not identify a competing cause. choice	**B.** A fruit discount started that week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, food, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-119 | Level 4 | Answer A

Prompt. The call center tried a plan to give support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**B.** The coaching slides use blue headers. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, customer support, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-120 | Level 4 | Answer D

Prompt. The water utility tried a plan to send automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The water-leak alert screen includes a blue droplet icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** A rainy season began during the study; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, utilities, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-121 | Level 4 | Answer C

Prompt. The police department tried a plan to send body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The reminder tone is two beeps. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, governance, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-122 | Level 4 | Answer B

Prompt. The election office tried a plan to offer online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The ballot-tracking page uses county colors. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, election administration, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-123 | Level 4 | Answer A

Prompt. The tutoring app tried a plan to send spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The review prompts use a bell icon. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, learning, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-124 | Level 4 | Answer D

Prompt. The gym tried a plan to offer a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The orientation mats are black. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, fitness, d4

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-125 | Level 4 | Answer C

Prompt. The insurer tried a plan to send weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**D.** The feedback dashboard uses star ratings. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, insurance, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-126 | Level 4 | Answer B

Prompt. The newsroom tried a plan to place corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The correction box has a gray border. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, media, d4

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-127 | Level 4 | Answer D

Prompt. The farmers market tried a plan to require clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The stall price signs are laminated. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, local commerce, d4

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-128 | Level 4 | Answer A

Prompt. The hotel tried a plan to send quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The quiet-hours text reminder uses a small moon icon. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, hospitality, d4

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

causation-129 | Level 5 | Answer A

Prompt. The city council tried a plan to extend evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct	**B.** The new buses were repainted blue. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, transportation, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-130 | Level 5 | Answer B

Prompt. The school board tried a plan to require phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The lockers are installed near the gym. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-131 | Level 5 | Answer C

Prompt. The hospital tried a plan to send medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct	**D.** The text messages use a green pill icon. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-132 | Level 5 | Answer D

Prompt. The company tried a plan to test a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The test calendar starts on a Monday. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-133 | Level 5 | Answer A

Prompt. The grocery chain tried a plan to add larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct	**B.** The shelf labels use bold black numbers. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, retail, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-134 | Level 5 | Answer B

Prompt. The library tried a plan to waive late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct
C. The children's-book checkout desk moved six feet. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public services, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-135 | Level 5 | Answer C

Prompt. The platform tried a plan to require two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The login button changed from green to blue. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-136 | Level 5 | Answer D

Prompt. The neighborhood association tried a plan to add brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The new light poles are made of aluminum. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, public safety, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-137 | Level 5 | Answer A

Prompt. The university tried a plan to expand peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The final exam was also shortened; that happened during the same period and could also explain the change. correct	**B.** The tutoring room has new chairs. That visible detail describes the setting but does not identify a competing cause. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, education, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-138 | Level 5 | Answer B

Prompt. The restaurant group tried a plan to show calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct
C. The lunch menus are printed on thicker paper. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nutrition, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-139 | Level 5 | Answer B

Prompt. The bank tried a plan to send overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct
C. The warning texts arrive from a short code. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, finance, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-140 | Level 5 | Answer A

Prompt. The park service tried a plan to use timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The digital passes include a small trail map. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-141 | Level 5 | Answer D

Prompt. The museum tried a plan to offer free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The Friday tickets are scanned at the east door. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, culture, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-142 | Level 5 | Answer C

Prompt. The sports league tried a plan to add mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The concussion checklist is printed on yellow paper. That visible detail describes the setting but does not identify a competing cause. choice
C. The league also shortened the season; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, sports, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-143 | Level 5 | Answer B

Prompt. The nonprofit tried a plan to send donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct
C. The receipt email subject line changed. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, nonprofit, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-144 | Level 5 | Answer A

Prompt. The warehouse tried a plan to offer monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The training room has a ceiling-mounted projector. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, workplace safety, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-145 | Level 5 | Answer D

Prompt. The city sanitation office tried a plan to place compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The lobby compost bins have foot pedals. That visible detail describes the setting but does not identify a competing cause. choice	**D.** Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, environment, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-146 | Level 5 | Answer C

Prompt. The app maker tried a plan to make new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The privacy screen uses a shield icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, technology, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-147 | Level 5 | Answer B

Prompt. The clinic tried a plan to reserve same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The appointment cards are white. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The clinic also began reminder calls; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, health, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-148 | Level 5 | Answer A

Prompt. The airline tried a plan to board passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The gate signs are backlit. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, travel, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-149 | Level 5 | Answer A

Prompt. The landlord tried a plan to launch an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The repair portal uses a house logo. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, housing, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-150 | Level 5 | Answer B

Prompt. The cafeteria tried a plan to move fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** A fruit discount started that week; that happened during the same period and could also explain the change. correct
C. The fruit bowls are ceramic. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, food, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-151 | Level 5 | Answer C

Prompt. The call center tried a plan to give support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The coaching slides use blue headers. That visible detail describes the setting but does not identify a competing cause. choice
C. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, customer support, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-152 | Level 5 | Answer D

Prompt. The water utility tried a plan to send automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The water-leak alert screen includes a blue droplet icon. That visible detail describes the setting but does not identify a competing cause. choice	**D.** A rainy season began during the study; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, utilities, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-153 | Level 5 | Answer A

Prompt. The police department tried a plan to send body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which fact would show why Taylor's claim is not proved yet?

A. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The reminder tone is two beeps. That visible detail describes the setting but does not identify a competing cause. choice	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is A because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, governance, d5

A feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-154 | Level 5 | Answer B

Prompt. The election office tried a plan to offer online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which fact would show why Morgan's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The ballot-tracking page uses county colors. That visible detail describes the setting but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is B because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, election administration, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

causation-155 | Level 5 | Answer C

Prompt. The tutoring app tried a plan to send spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which fact would show why Casey's claim is not proved yet?

A. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**B.** The review prompts use a bell icon. That visible detail describes the setting but does not identify a competing cause. choice
C. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, learning, d5

A feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

causation-156 | Level 5 | Answer D

Prompt. The gym tried a plan to offer a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which fact would show why Jordan's claim is not proved yet?

A. The orientation mats are black. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, fitness, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-157 | Level 5 | Answer C

Prompt. The insurer tried a plan to send weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which fact would show why Riley's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The feedback dashboard uses star ratings. That visible detail describes the setting but does not identify a competing cause. choice
C. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, insurance, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

causation-158 | Level 5 | Answer D

Prompt. The newsroom tried a plan to place corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which fact would show why Maya's claim is not proved yet?

A. The correction box has a gray border. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice
C. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**D.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, media, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

C feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-159 | Level 5 | Answer D

Prompt. The farmers market tried a plan to require clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which fact would show why Sam's claim is not proved yet?

A. The result is reported as a percentage, which describes the change but does not identify a competing cause. choice	**B.** The stall price signs are laminated. That visible detail describes the setting but does not identify a competing cause. choice
C. The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice	**D.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is D because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, local commerce, d5

A feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

B feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

C feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

D feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

causation-160 | Level 5 | Answer C

Prompt. The hotel tried a plan to send quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which fact would show why Avery's claim is not proved yet?

A. The quiet-hours text reminder uses a small moon icon. That visible detail describes the setting but does not identify a competing cause. choice	**B.** The result is reported as a percentage, which describes the change but does not identify a competing cause. choice
C. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**D.** The plan began before the result changed, which shows timing but does not rule out other causes during that period or separate the plan from them. choice

Core explanation. To prove cause, you need to rule out other likely causes or compare similar groups.

Process commentary. To uncover the answer, ask what else changed or what comparison is missing. The correct choice is C because it blocks the leap from observed change to proven cause.

Tags: causation, confounder, hospitality, d5

A feedback (Distractor): Not quite. A visible detail may describe the situation, but it does not rule out other causes.

B feedback (Distractor): Not quite. A percentage can describe a change, but it does not by itself show what caused the change.

C feedback (Correct): Correct. This fact gives a live alternative cause, so the observed change cannot yet be credited to the plan alone.

D feedback (Distractor): Not quite. Timing can be relevant, but timing alone does not prove the plan caused the result.

Skill 13

Consider Alternative Explanations

What Else Could Explain It?

Pick another explanation that also fits the facts. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What else could explain the same facts?
Why it matters	Good thinkers do not stop at the first explanation that fits. They ask what else could make the same facts true, especially when a conclusion is attractive.
Conceptual core	Alternative explanation thinking is disciplined imagination. Students keep the observed evidence fixed and ask what other story could make it true. This reduces premature closure, especially when the first explanation is emotionally satisfying or easy to remember. The strongest alternative explanation is specific, plausible, and compatible with the given facts.
Student method	Keep the observed facts fixed, then generate another story that could produce them. The best alternative is specific and fits the evidence without contradicting it.
Analogy	Alternative explanations are spare keys. If more than one key opens the same lock, you should not assume you have found the only one.
Assessment focus	A good answer names a plausible alternative that matches the observed facts and avoids unsupported contradictions.

Teaching Sequence

1. Name the observed result without interpreting it.

2. Generate another cause, condition, or selection effect that could produce the same result.

3. Reject alternatives that contradict the prompt.

4. Prefer alternatives that are specific enough to test.

Common Confusions To Watch For

1. Students may offer a random possibility that does not fit the facts.

2. Students may think an alternative explanation must disprove the original explanation.

3. Students may choose a vague phrase like many factors without naming one.

Teacher Prompts

1. What fact are we trying to explain?

2. What other story could make that fact true?

3. How could we test the original explanation against this alternative?

Worked Example

Scenario	A museum's family attendance rises after free Friday admission begins, but a popular dinosaur exhibit opens the same weekend.
Teacher think-aloud	Free admission could matter, but the new exhibit could also explain the attendance increase. Both fit the observed rise, so we need more evidence to separate them.
Student takeaway	An alternative explanation does not have to be proven; it has to plausibly fit the same evidence.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A museum's family visits rise from 200 to 320 during the first weekend of free admission. That weekend also brings a new dinosaur exhibit, a school holiday, and unusually heavy rain. The museum credits free admission alone.

What To Do

1. List three rival explanations using the supplied details.

2. For each, write one sentence explaining how it could increase museum visits. Mark these as possibilities, not established causes.

3. Choose one rival and name a comparison that would help distinguish it from the effect of price.

Check before reading the answer. Have you explained a plausible connection for each rival instead of merely listing coinciding events?

Model Answer

The dinosaur exhibit might attract interested families; the holiday might give them more free time; rain might make indoor activities more attractive. To examine the exhibit explanation, compare similar weekends with the same exhibit but different admission prices while keeping holiday and weather conditions as comparable as possible. The supplied facts do not tell us which cause contributed how much.

Why it is adequate. It supplies mechanisms for three alternatives and a relevant follow-up comparison without presenting possibilities as findings.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

alternative_explanations-001 | Level 1 | Answer B

Prompt. The city council tried extending evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The new buses were repainted blue. That visible detail is part of the scene, not another explanation of the change. choice	**B.** A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, transportation, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-002 | Level 1 | Answer A

Prompt. The school board tried requiring phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The lockers are installed near the gym. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-003 | Level 1 | Answer D

Prompt. The hospital tried sending medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The text messages use a green pill icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-004 | Level 1 | Answer C

Prompt. The company tried testing a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The test calendar starts on a Monday. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-005 | Level 1 | Answer B

Prompt. The grocery chain tried adding larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct
C. The shelf labels use bold black numbers. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, retail, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-006 | Level 1 | Answer A

Prompt. The library tried waiving late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The library also opened on Sundays; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The children's-book checkout desk moved six feet. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public services, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-007 | Level 1 | Answer D

Prompt. The platform tried requiring two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The login button changed from green to blue. That visible detail is part of the scene, not another explanation of the change. choice	**D.** Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-008 | Level 1 | Answer C

Prompt. The neighborhood association tried adding brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. Police patrols increased during the same period; that happened during the same period and could also explain the change. correct	**D.** The new light poles are made of aluminum. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public safety, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-009 | Level 1 | Answer B

Prompt. The university tried expanding peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The final exam was also shortened; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The tutoring room has new chairs. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-010 | Level 1 | Answer A

Prompt. The restaurant group tried showing calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct	**B.** The lunch menus are printed on thicker paper. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nutrition, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-011 | Level 1 | Answer C

Prompt. The bank tried sending overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The warning texts arrive from a short code. That visible detail is part of the scene, not another explanation of the change. choice
C. The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, finance, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-012 | Level 1 | Answer D

Prompt. The park service tried using timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The digital passes include a small trail map. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** A nearby trail reopened that month; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-013 | Level 1 | Answer A

Prompt. The museum tried offering free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The Friday tickets are scanned at the east door. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, culture, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-014 | Level 1 | Answer B

Prompt. The sports league tried adding mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The league also shortened the season; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The concussion checklist is printed on yellow paper. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, sports, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-015 | Level 1 | Answer A

Prompt. The nonprofit tried sending donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The receipt email subject line changed. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nonprofit, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-016 | Level 1 | Answer C

Prompt. The warehouse tried offering monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The training room has a ceiling-mounted projector. That visible detail is part of the scene, not another explanation of the change. choice
C. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace safety, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-017 | Level 1 | Answer A

Prompt. The city sanitation office tried placing compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The lobby compost bins have foot pedals. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-018 | Level 1 | Answer C

Prompt. The app maker tried making new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The privacy screen uses a shield icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-019 | Level 1 | Answer A

Prompt. The clinic tried reserving same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The clinic also began reminder calls; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The appointment cards are white. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-020 | Level 1 | Answer C

Prompt. The airline tried boarding passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The gate signs are backlit. That visible detail is part of the scene, not another explanation of the change. choice
C. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, travel, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-021 | Level 1 | Answer D

Prompt. The landlord tried launching an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The repair portal uses a house logo. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, housing, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-022 | Level 1 | Answer B

Prompt. The cafeteria tried moving fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A fruit discount started that week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The fruit bowls are ceramic. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, food, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-023 | Level 1 | Answer D

Prompt. The call center tried giving support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The coaching slides use blue headers. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The call queue was also shortened; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, customer support, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-024 | Level 1 | Answer C

Prompt. The water utility tried sending automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. A rainy season began during the study; that happened during the same period and could also explain the change. correct	**D.** The water-leak alert screen includes a blue droplet icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, utilities, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-025 | Level 1 | Answer D

Prompt. The police department tried sending body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The reminder tone is two beeps. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, governance, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-026 | Level 1 | Answer B

Prompt. The election office tried offering online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct
C. The ballot-tracking page uses county colors. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, election administration, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-027 | Level 1 | Answer D

Prompt. The tutoring app tried sending spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The review prompts use a bell icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The app also changed the quiz format; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, learning, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-028 | Level 1 | Answer B

Prompt. The gym tried offering a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The orientation mats are black. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, fitness, d1

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-029 | Level 1 | Answer D

Prompt. The insurer tried sending weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The feedback dashboard uses star ratings. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, insurance, d1

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-030 | Level 1 | Answer C

Prompt. The newsroom tried placing corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The correction box has a gray border. That visible detail is part of the scene, not another explanation of the change. choice
C. The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, media, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-031 | Level 1 | Answer A

Prompt. The farmers market tried requiring clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The market also added a weekend help desk; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The stall price signs are laminated. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, local commerce, d1

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-032 | Level 1 | Answer B

Prompt. The hotel tried sending quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The hotel also changed room assignments; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The quiet-hours text reminder uses a small moon icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, hospitality, d1

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

alternative_explanations-033 | Level 2 | Answer A

Prompt. The city council tried extending evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct	**B.** The new buses were repainted blue. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, transportation, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-034 | Level 2 | Answer B

Prompt. The school board tried requiring phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The lockers are installed near the gym. That visible detail is part of the scene, not another explanation of the change. choice	**B.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-035 | Level 2 | Answer C

Prompt. The hospital tried sending medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct	**D.** The text messages use a green pill icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-036 | Level 2 | Answer D

Prompt. The company tried testing a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The test calendar starts on a Monday. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-037 | Level 2 | Answer A

Prompt. The grocery chain tried adding larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The shelf labels use bold black numbers. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, retail, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-038 | Level 2 | Answer B

Prompt. The library tried waiving late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct
C. The children's-book checkout desk moved six feet. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public services, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-039 | Level 2 | Answer C

Prompt. The platform tried requiring two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The login button changed from green to blue. That visible detail is part of the scene, not another explanation of the change. choice
C. Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-040 | Level 2 | Answer D

Prompt. The neighborhood association tried adding brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The new light poles are made of aluminum. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public safety, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-041 | Level 2 | Answer C

Prompt. The university tried expanding peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The tutoring room has new chairs. That visible detail is part of the scene, not another explanation of the change. choice
C. The final exam was also shortened; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-042 | Level 2 | Answer D

Prompt. The restaurant group tried showing calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The lunch menus are printed on thicker paper. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nutrition, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-043 | Level 2 | Answer B

Prompt. The bank tried sending overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct
C. The warning texts arrive from a short code. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, finance, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-044 | Level 2 | Answer A

Prompt. The park service tried using timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**B.** The digital passes include a small trail map. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-045 | Level 2 | Answer D

Prompt. The museum tried offering free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The Friday tickets are scanned at the east door. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, culture, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-046 | Level 2 | Answer C

Prompt. The sports league tried adding mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The concussion checklist is printed on yellow paper. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The league also shortened the season; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, sports, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-047 | Level 2 | Answer B

Prompt. The nonprofit tried sending donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The receipt email subject line changed. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nonprofit, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-048 | Level 2 | Answer A

Prompt. The warehouse tried offering monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The training room has a ceiling-mounted projector. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace safety, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-049 | Level 2 | Answer D

Prompt. The city sanitation office tried placing compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The lobby compost bins have foot pedals. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-050 | Level 2 | Answer C

Prompt. The app maker tried making new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**D.** The privacy screen uses a shield icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-051 | Level 2 | Answer D

Prompt. The clinic tried reserving same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The appointment cards are white. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The clinic also began reminder calls; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-052 | Level 2 | Answer C

Prompt. The airline tried boarding passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The gate signs are backlit. That visible detail is part of the scene, not another explanation of the change. choice
C. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, travel, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-053 | Level 2 | Answer A

Prompt. The landlord tried launching an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The repair portal uses a house logo. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, housing, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-054 | Level 2 | Answer B

Prompt. The cafeteria tried moving fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A fruit discount started that week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The fruit bowls are ceramic. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, food, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-055 | Level 2 | Answer C

Prompt. The call center tried giving support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The coaching slides use blue headers. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, customer support, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-056 | Level 2 | Answer D

Prompt. The water utility tried sending automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The water-leak alert screen includes a blue droplet icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** A rainy season began during the study; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, utilities, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-057 | Level 2 | Answer A

Prompt. The police department tried sending body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**B.** The reminder tone is two beeps. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, governance, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-058 | Level 2 | Answer B

Prompt. The election office tried offering online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct
C. The ballot-tracking page uses county colors. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, election administration, d2

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-059 | Level 2 | Answer C

Prompt. The tutoring app tried sending spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**D.** The review prompts use a bell icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, learning, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-060 | Level 2 | Answer D

Prompt. The gym tried offering a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The orientation mats are black. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, fitness, d2

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-061 | Level 2 | Answer A

Prompt. The insurer tried sending weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**B.** The feedback dashboard uses star ratings. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, insurance, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-062 | Level 2 | Answer B

Prompt. The newsroom tried placing corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The correction box has a gray border. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, media, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-063 | Level 2 | Answer B

Prompt. The farmers market tried requiring clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The stall price signs are laminated. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, local commerce, d2

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-064 | Level 2 | Answer A

Prompt. The hotel tried sending quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The quiet-hours text reminder uses a small moon icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, hospitality, d2

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

alternative_explanations-065 | Level 3 | Answer B

Prompt. The city council tried extending evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The new buses were repainted blue. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, transportation, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-066 | Level 3 | Answer A

Prompt. The school board tried requiring phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The lockers are installed near the gym. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-067 | Level 3 | Answer D

Prompt. The hospital tried sending medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The text messages use a green pill icon. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-068 | Level 3 | Answer C

Prompt. The company tried testing a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct	**D.** The test calendar starts on a Monday. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-069 | Level 3 | Answer B

Prompt. The grocery chain tried adding larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The shelf labels use bold black numbers. That visible detail is part of the scene, not another explanation of the change. choice	**B.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, retail, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-070 | Level 3 | Answer A

Prompt. The library tried waiving late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The library also opened on Sundays; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The children's-book checkout desk moved six feet. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public services, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-071 | Level 3 | Answer D

Prompt. The platform tried requiring two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The login button changed from green to blue. That visible detail is part of the scene, not another explanation of the change. choice	**D.** Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-072 | Level 3 | Answer C

Prompt. The neighborhood association tried adding brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. Police patrols increased during the same period; that happened during the same period and could also explain the change. correct	**D.** The new light poles are made of aluminum. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public safety, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-073 | Level 3 | Answer B

Prompt. The university tried expanding peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The final exam was also shortened; that happened during the same period and could also explain the change. correct
C. The tutoring room has new chairs. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-074 | Level 3 | Answer A

Prompt. The restaurant group tried showing calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The lunch menus are printed on thicker paper. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nutrition, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-075 | Level 3 | Answer C

Prompt. The bank tried sending overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The warning texts arrive from a short code. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, finance, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-076 | Level 3 | Answer D

Prompt. The park service tried using timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The digital passes include a small trail map. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** A nearby trail reopened that month; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-077 | Level 3 | Answer A

Prompt. The museum tried offering free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The Friday tickets are scanned at the east door. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, culture, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-078 | Level 3 | Answer B

Prompt. The sports league tried adding mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The league also shortened the season; that happened during the same period and could also explain the change. correct
C. The concussion checklist is printed on yellow paper. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, sports, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-079 | Level 3 | Answer C

Prompt. The nonprofit tried sending donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The receipt email subject line changed. That visible detail is part of the scene, not another explanation of the change. choice
C. The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nonprofit, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-080 | Level 3 | Answer D

Prompt. The warehouse tried offering monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The training room has a ceiling-mounted projector. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace safety, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-081 | Level 3 | Answer A

Prompt. The city sanitation office tried placing compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The lobby compost bins have foot pedals. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-082 | Level 3 | Answer B

Prompt. The app maker tried making new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct
C. The privacy screen uses a shield icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-083 | Level 3 | Answer C

Prompt. The clinic tried reserving same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The appointment cards are white. That visible detail is part of the scene, not another explanation of the change. choice
C. The clinic also began reminder calls; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-084 | Level 3 | Answer D

Prompt. The airline tried boarding passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The gate signs are backlit. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, travel, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-085 | Level 3 | Answer D

Prompt. The landlord tried launching an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The repair portal uses a house logo. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, housing, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-086 | Level 3 | Answer C

Prompt. The cafeteria tried moving fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The fruit bowls are ceramic. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. A fruit discount started that week; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, food, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-087 | Level 3 | Answer B

Prompt. The call center tried giving support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The call queue was also shortened; that happened during the same period and could also explain the change. correct
C. The coaching slides use blue headers. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, customer support, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-088 | Level 3 | Answer A

Prompt. The water utility tried sending automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. A rainy season began during the study; that happened during the same period and could also explain the change. correct	**B.** The water-leak alert screen includes a blue droplet icon. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, utilities, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-089 | Level 3 | Answer D

Prompt. The police department tried sending body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The reminder tone is two beeps. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, governance, d3

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-090 | Level 3 | Answer C

Prompt. The election office tried offering online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The ballot-tracking page uses county colors. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The office also expanded its phone staff; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, election administration, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-091 | Level 3 | Answer B

Prompt. The tutoring app tried sending spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The review prompts use a bell icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The app also changed the quiz format; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, learning, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-092 | Level 3 | Answer A

Prompt. The gym tried offering a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The gym also discounted annual plans; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The orientation mats are black. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, fitness, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-093 | Level 3 | Answer D

Prompt. The insurer tried sending weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The feedback dashboard uses star ratings. That visible detail is part of the scene, not another explanation of the change. choice	**D.** Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, insurance, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-094 | Level 3 | Answer C

Prompt. The newsroom tried placing corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct	**D.** The correction box has a gray border. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, media, d3

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-095 | Level 3 | Answer A

Prompt. The farmers market tried requiring clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The market also added a weekend help desk; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The stall price signs are laminated. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, local commerce, d3

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-096 | Level 3 | Answer B

Prompt. The hotel tried sending quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The quiet-hours text reminder uses a small moon icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The hotel also changed room assignments; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, hospitality, d3

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

alternative_explanations-097 | Level 4 | Answer C

Prompt. The city council tried extending evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct	**D.** The new buses were repainted blue. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, transportation, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-098 | Level 4 | Answer D

Prompt. The school board tried requiring phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The lockers are installed near the gym. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-099 | Level 4 | Answer A

Prompt. The hospital tried sending medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct	**B.** The text messages use a green pill icon. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-100 | Level 4 | Answer B

Prompt. The company tried testing a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The test calendar starts on a Monday. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-101 | Level 4 | Answer C

Prompt. The grocery chain tried adding larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The shelf labels use bold black numbers. That visible detail is part of the scene, not another explanation of the change. choice
C. A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, retail, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-102 | Level 4 | Answer D

Prompt. The library tried waiving late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The children's-book checkout desk moved six feet. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The library also opened on Sundays; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public services, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-103 | Level 4 | Answer A

Prompt. The platform tried requiring two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct	**B.** The login button changed from green to blue. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-104 | Level 4 | Answer B

Prompt. The neighborhood association tried adding brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The new light poles are made of aluminum. That visible detail is part of the scene, not another explanation of the change. choice	**B.** Police patrols increased during the same period; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public safety, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-105 | Level 4 | Answer A

Prompt. The university tried expanding peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The final exam was also shortened; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The tutoring room has new chairs. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-106 | Level 4 | Answer B

Prompt. The restaurant group tried showing calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The lunch menus are printed on thicker paper. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nutrition, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-107 | Level 4 | Answer D

Prompt. The bank tried sending overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The warning texts arrive from a short code. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, finance, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-108 | Level 4 | Answer C

Prompt. The park service tried using timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. A nearby trail reopened that month; that happened during the same period and could also explain the change. correct	**D.** The digital passes include a small trail map. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-109 | Level 4 | Answer B

Prompt. The museum tried offering free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The Friday tickets are scanned at the east door. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, culture, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-110 | Level 4 | Answer A

Prompt. The sports league tried adding mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The league also shortened the season; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The concussion checklist is printed on yellow paper. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, sports, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-111 | Level 4 | Answer D

Prompt. The nonprofit tried sending donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The receipt email subject line changed. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nonprofit, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-112 | Level 4 | Answer C

Prompt. The warehouse tried offering monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The training room has a ceiling-mounted projector. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace safety, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-113 | Level 4 | Answer B

Prompt. The city sanitation office tried placing compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The lobby compost bins have foot pedals. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-114 | Level 4 | Answer A

Prompt. The app maker tried making new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The privacy screen uses a shield icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-115 | Level 4 | Answer D

Prompt. The clinic tried reserving same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The appointment cards are white. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The clinic also began reminder calls; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-116 | Level 4 | Answer C

Prompt. The airline tried boarding passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct	**D.** The gate signs are backlit. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, travel, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-117 | Level 4 | Answer A

Prompt. The landlord tried launching an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The repair portal uses a house logo. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, housing, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-118 | Level 4 | Answer B

Prompt. The cafeteria tried moving fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A fruit discount started that week; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The fruit bowls are ceramic. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, food, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-119 | Level 4 | Answer C

Prompt. The call center tried giving support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The coaching slides use blue headers. That visible detail is part of the scene, not another explanation of the change. choice
C. The call queue was also shortened; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, customer support, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-120 | Level 4 | Answer D

Prompt. The water utility tried sending automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The water-leak alert screen includes a blue droplet icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** A rainy season began during the study; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, utilities, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-121 | Level 4 | Answer A

Prompt. The police department tried sending body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct	**B.** The reminder tone is two beeps. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, governance, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-122 | Level 4 | Answer B

Prompt. The election office tried offering online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The ballot-tracking page uses county colors. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The office also expanded its phone staff; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, election administration, d4

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-123 | Level 4 | Answer C

Prompt. The tutoring app tried sending spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The app also changed the quiz format; that happened during the same period and could also explain the change. correct	**D.** The review prompts use a bell icon. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, learning, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-124 | Level 4 | Answer D

Prompt. The gym tried offering a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The orientation mats are black. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The gym also discounted annual plans; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, fitness, d4

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-125 | Level 4 | Answer A

Prompt. The insurer tried sending weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The feedback dashboard uses star ratings. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, insurance, d4

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-126 | Level 4 | Answer B

Prompt. The newsroom tried placing corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The correction box has a gray border. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, media, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-127 | Level 4 | Answer D

Prompt. The farmers market tried requiring clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The stall price signs are laminated. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The market also added a weekend help desk; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, local commerce, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-128 | Level 4 | Answer C

Prompt. The hotel tried sending quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The quiet-hours text reminder uses a small moon icon. That visible detail is part of the scene, not another explanation of the change. choice
C. The hotel also changed room assignments; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, hospitality, d4

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

alternative_explanations-129 | Level 5 | Answer B

Prompt. The city council tried extending evening bus service until midnight. Late-shift commute complaints fell by 22% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** A large employer started a private shuttle the same month; that happened during the same period and could also explain the change. correct
C. The new buses were repainted blue. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, transportation, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-130 | Level 5 | Answer A

Prompt. The school board tried requiring phone lockers during class. Classroom disruption reports fell by 31% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. A new hall monitor schedule began at the same time; that happened during the same period and could also explain the change. correct	**B.** The lockers are installed near the gym. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-131 | Level 5 | Answer D

Prompt. The hospital tried sending medication reminder texts before evening doses. Missed-dose reports fell by 18% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The text messages use a green pill icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** Pharmacists also began follow-up calls; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-132 | Level 5 | Answer C

Prompt. The company tried testing a Monday-through-Thursday workweek. Staff resignations fell by 15% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The company also raised salaries that quarter; that happened during the same period and could also explain the change. correct	**D.** The test calendar starts on a Monday. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-133 | Level 5 | Answer B

Prompt. The grocery chain tried adding larger unit-price labels on shelf tags. Shopper overpayment complaints fell by 27% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A local consumer group ran a price-literacy campaign; that happened during the same period and could also explain the change. correct
C. The shelf labels use bold black numbers. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, retail, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-134 | Level 5 | Answer A

Prompt. The library tried waiving late fines for children's books. Library card renewals rose by 19% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The library also opened on Sundays; that happened during the same period and could also explain the change. correct	**B.** The children's-book checkout desk moved six feet. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public services, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-135 | Level 5 | Answer D

Prompt. The platform tried requiring two-factor login for site administrators. Admin account takeovers fell by 44% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The login button changed from green to blue. That visible detail is part of the scene, not another explanation of the change. choice	**D.** Some high-risk admin accounts were removed earlier; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-136 | Level 5 | Answer C

Prompt. The neighborhood association tried adding brighter LED streetlights on Maple Street. Reported thefts fell by 12% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The new light poles are made of aluminum. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. Police patrols increased during the same period; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, public safety, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-137 | Level 5 | Answer D

Prompt. The university tried expanding peer tutoring in statistics. Course pass rates rose by 11% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The tutoring room has new chairs. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The final exam was also shortened; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, education, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-138 | Level 5 | Answer C

Prompt. The restaurant group tried showing calorie labels on printed lunch menus. Dessert orders fell by 16% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The lunch menus are printed on thicker paper. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. Dessert prices increased at the same time; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nutrition, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-139 | Level 5 | Answer A

Prompt. The bank tried sending overdraft warning texts before fees post. Overdraft fees fell by 24% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The bank also changed its fee grace period; that happened during the same period and could also explain the change. correct	**B.** The warning texts arrive from a short code. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, finance, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-140 | Level 5 | Answer B

Prompt. The park service tried using timed-entry passes for weekend trail visits. Trail crowding complaints fell by 33% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** A nearby trail reopened that month; that happened during the same period and could also explain the change. correct
C. The digital passes include a small trail map. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-141 | Level 5 | Answer C

Prompt. The museum tried offering free admission on Fridays. Family visits rose by 29% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The Friday tickets are scanned at the east door. That visible detail is part of the scene, not another explanation of the change. choice
C. A new children's exhibit opened the same week; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, culture, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-142 | Level 5 | Answer D

Prompt. The sports league tried adding mandatory sideline concussion checks. Repeat head injuries fell by 21% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The concussion checklist is printed on yellow paper. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The league also shortened the season; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, sports, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-143 | Level 5 | Answer A

Prompt. The nonprofit tried sending donation receipts within one day. Donor retention rose by 14% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The nonprofit also launched a matching campaign; that happened during the same period and could also explain the change. correct	**B.** The receipt email subject line changed. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, nonprofit, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-144 | Level 5 | Answer B

Prompt. The warehouse tried offering monthly lifting-safety and ergonomic training. Back-injury claims fell by 20% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The training room has a ceiling-mounted projector. That visible detail is part of the scene, not another explanation of the change. choice	**B.** New lifting equipment arrived that quarter; that happened during the same period and could also explain the change. correct
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, workplace safety, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-145 | Level 5 | Answer C

Prompt. The city sanitation office tried placing compost bins in apartment lobbies. Landfill waste from participating buildings fell by 17% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The lobby compost bins have foot pedals. That visible detail is part of the scene, not another explanation of the change. choice
C. Trash pickup schedules also changed; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, environment, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-146 | Level 5 | Answer D

Prompt. The app maker tried making new user profiles private by default. Publicly visible profiles fell by 48% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The privacy screen uses a shield icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The app also deleted inactive accounts; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, technology, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-147 | Level 5 | Answer C

Prompt. The clinic tried reserving same-day appointment slots. Patient no-show rates fell by 13% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The appointment cards are white. That visible detail is part of the scene, not another explanation of the change. choice
C. The clinic also began reminder calls; that happened during the same period and could also explain the change. correct	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, health, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-148 | Level 5 | Answer D

Prompt. The airline tried boarding passengers by seat zone. Average boarding time fell by 9% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The result is reported as a percentage, which describes what happened but not why it happened. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The gate signs are backlit. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The airline also reduced carry-on size limits; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, travel, d5

A feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-149 | Level 5 | Answer B

Prompt. The landlord tried launching an online apartment repair portal. Unresolved repair requests fell by 26% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The landlord hired two additional repair technicians; that happened during the same period and could also explain the change. correct
C. The repair portal uses a house logo. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, housing, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-150 | Level 5 | Answer A

Prompt. The cafeteria tried moving fruit bowls to the front of the cafeteria line. Fruit purchases rose by 23% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. A fruit discount started that week; that happened during the same period and could also explain the change. correct	**B.** The fruit bowls are ceramic. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, food, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-151 | Level 5 | Answer D

Prompt. The call center tried giving support agents weekly script coaching. Customer complaint rates fell by 18% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The coaching slides use blue headers. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The call queue was also shortened; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, customer support, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-152 | Level 5 | Answer C

Prompt. The water utility tried sending automatic household water-leak alerts. Average household water use fell by 10% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The water-leak alert screen includes a blue droplet icon. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. A rainy season began during the study; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, utilities, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-153 | Level 5 | Answer B

Prompt. The police department tried sending body-camera activation reminders before patrol shifts. Missing-camera-footage reports fell by 35% in the four weeks after the plan began compared with the four weeks before it. Taylor says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The department also updated supervisor reviews; that happened during the same period and could also explain the change. correct
C. The reminder tone is two beeps. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, governance, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-154 | Level 5 | Answer A

Prompt. The election office tried offering online mail-ballot tracking. Phone calls asking ballot status fell by 42% in the four weeks after the plan began compared with the four weeks before it. Morgan says, "The plan caused the change." Which other explanation also fits the facts?

A. The office also expanded its phone staff; that happened during the same period and could also explain the change. correct	**B.** The ballot-tracking page uses county colors. That visible detail is part of the scene, not another explanation of the change. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, election administration, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-155 | Level 5 | Answer D

Prompt. The tutoring app tried sending spaced-review prompts for language vocabulary. Vocabulary retention quiz scores rose by 12% in the four weeks after the plan began compared with the four weeks before it. Casey says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The review prompts use a bell icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The app also changed the quiz format; that happened during the same period and could also explain the change. correct

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is D because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, learning, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

alternative_explanations-156 | Level 5 | Answer C

Prompt. The gym tried offering a beginner gym orientation. New-member cancellations fell by 19% in the four weeks after the plan began compared with the four weeks before it. Jordan says, "The plan caused the change." Which other explanation also fits the facts?

A. The orientation mats are black. That visible detail is part of the scene, not another explanation of the change. choice	**B.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice
C. The gym also discounted annual plans; that happened during the same period and could also explain the change. correct	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is C because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, fitness, d5

A feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

B feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

C feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-157 | Level 5 | Answer B

Prompt. The insurer tried sending weekly safe-driving feedback. Reported minor crashes fell by 8% in the four weeks after the plan began compared with the four weeks before it. Riley says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** Fuel prices changed driving patterns that month; that happened during the same period and could also explain the change. correct
C. The feedback dashboard uses star ratings. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, insurance, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

alternative_explanations-158 | Level 5 | Answer A

Prompt. The newsroom tried placing corrections at the top of articles. Reader trust ratings rose by 7% in the four weeks after the plan began compared with the four weeks before it. Maya says, "The plan caused the change." Which other explanation also fits the facts?

A. The newsroom also hired a public editor; that happened during the same period and could also explain the change. correct	**B.** The correction box has a gray border. That visible detail is part of the scene, not another explanation of the change. choice
C. The result is reported as a percentage, which describes what happened but not why it happened. choice	**D.** The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, media, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

C feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

D feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

alternative_explanations-159 | Level 5 | Answer A

Prompt. The farmers market tried requiring clearer price signs at vendor stalls. Price disputes fell by 28% in the four weeks after the plan began compared with the four weeks before it. Sam says, "The plan caused the change." Which other explanation also fits the facts?

A. The market also added a weekend help desk; that happened during the same period and could also explain the change. correct	**B.** The result is reported as a percentage, which describes what happened but not why it happened. choice
C. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**D.** The stall price signs are laminated. That visible detail is part of the scene, not another explanation of the change. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is A because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, local commerce, d5

A feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

B feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

C feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

D feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

alternative_explanations-160 | Level 5 | Answer B

Prompt. The hotel tried sending quiet-hours text reminders to hotel guests. Noise complaints from guest rooms fell by 30% in the four weeks after the plan began compared with the four weeks before it. Avery says, "The plan caused the change." Which other explanation also fits the facts?

A. The plan was discussed before the result changed, which gives timing rather than another possible cause during that period or separate the plan from other changes. choice	**B.** The hotel also changed room assignments; that happened during the same period and could also explain the change. correct
C. The quiet-hours text reminder uses a small moon icon. That visible detail is part of the scene, not another explanation of the change. choice	**D.** The result is reported as a percentage, which describes what happened but not why it happened. choice

Core explanation. A good alternative explanation fits the same facts without assuming the first cause is right.

Process commentary. To uncover the answer, keep the observed result fixed and test which option gives another plausible cause. The correct choice is B because it fits the facts without assuming the original explanation is the only one.

Tags: alternative_explanations, alternatives, hospitality, d5

A feedback (Distractor): Not quite. Timing tells when things happened, but it does not give a separate cause that could explain the change.

B feedback (Correct): Correct. This explanation fits the same facts without assuming the proposed plan caused the result.

C feedback (Distractor): Not quite. A scene detail may be true, but it does not explain why the result changed.

D feedback (Distractor): Not quite. A percentage describes the result, but it does not give another explanation for why the result happened.

Skill 14

Recognize Cognitive Biases

What Bias Is Showing?

Name the thinking bias shown in a choice. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What mental pull is shaping this judgment?
Why it matters	Biases are not just mistakes in arguments; they are patterns in attention, memory, confidence, and desire that shape judgment before an argument is even spoken.
Conceptual core	Cognitive biases are patterns in attention, memory, confidence, motivation, and social influence. Students should learn that bias does not mean stupidity or bad character; it means a normal mental shortcut is distorting judgment. The skill is to identify the pull: toward confirming what we already believe, following the group, protecting past effort, anchoring on the first number, or trusting what is easiest to recall.
Student method	Identify what is pulling the person's thinking off course: confirming a prior view, following the crowd, anchoring on a first number, protecting sunk costs, favoring the familiar, or overestimating certainty.
Analogy	A cognitive bias is like a lens tint. The scene is still there, but the tint changes what stands out and what fades.
Assessment focus	A good answer identifies the bias pattern shown by the person's thinking and distinguishes it from nearby labels.
Resource note	The quiz feedback links bias items to corresponding CogBias articles when a direct article match is available.

Teaching Sequence

1. Identify what the thinker is drawn toward or away from.

2. Separate evidence problems from mind-pattern problems.

3. Match the pattern to the bias label.

4. Suggest a debiasing move, such as seeking disconfirming evidence or resetting the anchor.

Common Confusions To Watch For

1. Students may label any mistake as bias without naming the mental pattern.

2. Students may confuse a fallacy in an argument with a bias in judgment.

3. Students may treat bias as something only other people have.

Teacher Prompts

1. What is pulling the person's attention?

2. What information is being overweighted or ignored?

3. What would a more balanced thinking move look like?

Worked Example

Scenario	After deciding a study app is helpful, a student reads only positive reviews and skips detailed negative reviews.
Teacher think-aloud	The student is filtering information to support a prior belief. That is confirmation bias, and the correction is to actively inspect evidence on the other side.
Student takeaway	Bias labels should point to a specific mental pull.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. After buying a study app, Sam reads six glowing reviews and skips four detailed critical reviews because 'they will only make me doubt my choice'. Sam concludes the app must improve learning. No learning results have been collected.

What To Do

1. Identify the evidence Sam selects and the evidence Sam avoids, and explain the direction of the preference.

2. Write a three-step checking plan: include both kinds of reviews, use the same quality criteria for them, and collect a learning measure rather than relying only on praise.

3. Name a specific learning measure, such as a delayed quiz on comparable material, and say why review popularity alone is insufficient.

Check before reading the answer. Does your plan make it possible to discover that the purchase was unhelpful, or only reassure Sam?

Model Answer

Sam favours praise that confirms the purchase and avoids criticism that could challenge it. Plan: read all ten reviews; assess each for relevant experience and checkable evidence using the same criteria; compare delayed-quiz performance on comparable material studied with and without the app under similar conditions. Positive reviews show approval, not necessarily better learning.

Why it is adequate. It describes the selective attention and turns a vague request to 'be unbiased' into concrete checks capable of revealing a mistake.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

cognitive_biases-001 | Level 1 | Answer C

Prompt. In a discussion about evening bus service for late-shift workers, Riley reads only comments praising the plan to extend evening bus service until midnight and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Motivated reasoning choice	**B.** Sunk cost bias choice
C. Confirmation bias correct	**D.** Anchoring choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, transportation, d1

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

C feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

cognitive_biases-002 | Level 1 | Answer A

Prompt. In a discussion about classroom phone lockers, Maya hears one vivid story about ninth-grade students and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Availability bias correct	**B.** Overconfidence bias choice
C. Bandwagon effect choice	**D.** Status quo bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, education, d1

A feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

cognitive_biases-003 | Level 1 | Answer D

Prompt. In a discussion about medication reminder texts for older patients, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Bandwagon effect choice	**B.** Status quo bias choice
C. Overconfidence bias choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, health, d1

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-004 | Level 1 | Answer C

Prompt. In a discussion about a four-day workweek test for software engineers, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Confirmation bias choice	**B.** Anchoring choice
C. Sunk cost bias correct	**D.** Motivated reasoning choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, workplace, d1

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-005 | Level 1 | Answer B

Prompt. In a discussion about larger grocery unit-price labels, Taylor predicts exact results from adding larger unit-price labels on shelf tags even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Confirmation bias choice	**B.** Overconfidence bias correct
C. Availability bias choice	**D.** Status quo bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, retail, d1

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

cognitive_biases-006 | Level 1 | Answer A

Prompt. In a discussion about late fines on children's books, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Availability bias choice
C. Sunk cost bias choice	**D.** Motivated reasoning choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, public services, d1

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-007 | Level 1 | Answer D

Prompt. In a discussion about two-factor login for site administrators, Casey praises weak evidence supporting requiring two-factor login for site administrators because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Availability bias choice	**B.** Status quo bias choice
C. Bandwagon effect choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, technology, d1

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-008 | Level 1 | Answer C

Prompt. In a discussion about brighter streetlights on Maple Street, Jordan supports adding brighter LED streetlights on Maple Street after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Sunk cost bias choice	**B.** Availability bias choice
C. Bandwagon effect correct	**D.** Overconfidence bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, public safety, d1

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows bandwagon effect.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

cognitive_biases-009 | Level 1 | Answer B

Prompt. In a discussion about peer tutoring for first-year statistics students, Riley reads only comments praising the plan to expand peer tutoring in statistics and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Status quo bias choice	**B.** Confirmation bias correct
C. Sunk cost bias choice	**D.** Motivated reasoning choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, education, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-010 | Level 1 | Answer A

Prompt. In a discussion about calorie labels on restaurant menus, Maya hears one vivid story about lunch customers and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Availability bias correct	**B.** Status quo bias choice
C. Anchoring choice	**D.** Motivated reasoning choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, nutrition, d1

A feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows availability bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-011 | Level 1 | Answer A

Prompt. In a discussion about bank overdraft warning texts, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Anchoring correct	**B.** Bandwagon effect choice
C. Sunk cost bias choice	**D.** Motivated reasoning choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, finance, d1

A feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

cognitive_biases-012 | Level 1 | Answer C

Prompt. In a discussion about timed-entry passes for weekend park trails, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Motivated reasoning choice	**B.** Confirmation bias choice
C. Sunk cost bias correct	**D.** Anchoring choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, environment, d1

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

cognitive_biases-013 | Level 1 | Answer C

Prompt. In a discussion about free Friday museum admission, Taylor predicts exact results from offering free admission on Fridays even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Confirmation bias choice	**B.** Status quo bias choice
C. Overconfidence bias correct	**D.** Sunk cost bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, culture, d1

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

C feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-014 | Level 1 | Answer D

Prompt. In a discussion about youth soccer concussion checks, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Confirmation bias choice	**B.** Motivated reasoning choice
C. Availability bias choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, sports, d1

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-015 | Level 1 | Answer C

Prompt. In a discussion about same-day donation receipts, Casey praises weak evidence supporting sending donation receipts within one day because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Status quo bias choice	**B.** Bandwagon effect choice
C. Motivated reasoning correct	**D.** Anchoring choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, nonprofit, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

cognitive_biases-016 | Level 1 | Answer D

Prompt. In a discussion about warehouse ergonomic training, Jordan supports offering monthly lifting-safety and ergonomic training after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Anchoring choice	**B.** Status quo bias choice
C. Confirmation bias choice	**D.** Bandwagon effect correct

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, workplace safety, d1

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

cognitive_biases-017 | Level 1 | Answer A

Prompt. In a discussion about apartment-lobby compost bins, Riley reads only comments praising the plan to place compost bins in apartment lobbies and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Sunk cost bias choice
C. Bandwagon effect choice	**D.** Availability bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, environment, d1

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

cognitive_biases-018 | Level 1 | Answer B

Prompt. In a discussion about private-by-default app profiles, Maya hears one vivid story about new app users and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Sunk cost bias choice	**B.** Availability bias correct
C. Confirmation bias choice	**D.** Bandwagon effect choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, technology, d1

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

B feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-019 | Level 1 | Answer C

Prompt. In a discussion about same-day clinic appointment slots, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Motivated reasoning choice	**B.** Availability bias choice
C. Anchoring correct	**D.** Bandwagon effect choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, health, d1

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

cognitive_biases-020 | Level 1 | Answer A

Prompt. In a discussion about seat-zone airline boarding, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Motivated reasoning choice
C. Bandwagon effect choice	**D.** Anchoring choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, travel, d1

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

cognitive_biases-021 | Level 1 | Answer B

Prompt. In a discussion about an online apartment repair portal, Taylor predicts exact results from launching an online apartment repair portal even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Status quo bias choice	**B.** Overconfidence bias correct
C. Sunk cost bias choice	**D.** Bandwagon effect choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, housing, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-022 | Level 1 | Answer D

Prompt. In a discussion about fruit placement in a school cafeteria line, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Availability bias choice	**B.** Motivated reasoning choice
C. Confirmation bias choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, food, d1

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-023 | Level 1 | Answer B

Prompt. In a discussion about weekly call-center script coaching, Casey praises weak evidence supporting giving support agents weekly script coaching because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Motivated reasoning correct
C. Overconfidence bias choice	**D.** Bandwagon effect choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, customer support, d1

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

cognitive_biases-024 | Level 1 | Answer A

Prompt. In a discussion about household water-leak alerts, Jordan supports sending automatic household water-leak alerts after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Motivated reasoning choice
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, utilities, d1

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

cognitive_biases-025 | Level 1 | Answer D

Prompt. In a discussion about body-camera activation reminders, Riley reads only comments praising the plan to send body-camera activation reminders before patrol shifts and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Status quo bias choice	**B.** Bandwagon effect choice
C. Overconfidence bias choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, governance, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-026 | Level 1 | Answer C

Prompt. In a discussion about county mail-ballot tracking, Maya hears one vivid story about mail voters and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Status quo bias choice	**B.** Motivated reasoning choice
C. Availability bias correct	**D.** Anchoring choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, election administration, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows availability bias.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

cognitive_biases-027 | Level 1 | Answer A

Prompt. In a discussion about language-learning spaced-review prompts, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Anchoring correct	**B.** Overconfidence bias choice
C. Bandwagon effect choice	**D.** Motivated reasoning choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, learning, d1

A feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

cognitive_biases-028 | Level 1 | Answer B

Prompt. In a discussion about a beginner gym orientation, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Status quo bias choice	**B.** Sunk cost bias correct
C. Confirmation bias choice	**D.** Anchoring choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, fitness, d1

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows sunk cost bias.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

cognitive_biases-029 | Level 1 | Answer D

Prompt. In a discussion about safe-driving feedback for policyholders, Taylor predicts exact results from sending weekly safe-driving feedback even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Availability bias choice	**B.** Anchoring choice
C. Bandwagon effect choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, insurance, d1

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-030 | Level 1 | Answer B

Prompt. In a discussion about top-of-article correction boxes, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Sunk cost bias choice	**B.** Status quo bias correct
C. Availability bias choice	**D.** Bandwagon effect choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, media, d1

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

B feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-031 | Level 1 | Answer D

Prompt. In a discussion about clearer farmers market price signs, Casey praises weak evidence supporting requiring clearer price signs at vendor stalls because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Confirmation bias choice	**B.** Anchoring choice
C. Bandwagon effect choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, local commerce, d1

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-032 | Level 1 | Answer B

Prompt. In a discussion about hotel quiet-hours text reminders, Jordan supports sending quiet-hours text reminders to hotel guests after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Motivated reasoning choice	**B.** Bandwagon effect correct
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, hospitality, d1

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

cognitive_biases-033 | Level 2 | Answer A

Prompt. In a discussion about evening bus service for late-shift workers, Maya hears one vivid story about late-shift workers and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Availability bias correct	**B.** Sunk cost bias choice
C. Status quo bias choice	**D.** Motivated reasoning choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, transportation, d2

A feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows availability bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-034 | Level 2 | Answer B

Prompt. In a discussion about classroom phone lockers, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Sunk cost bias choice	**B.** Anchoring correct
C. Motivated reasoning choice	**D.** Overconfidence bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, education, d2

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

B feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

cognitive_biases-035 | Level 2 | Answer C

Prompt. In a discussion about medication reminder texts for older patients, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Confirmation bias choice	**B.** Anchoring choice
C. Sunk cost bias correct	**D.** Availability bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, health, d2

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

cognitive_biases-036 | Level 2 | Answer D

Prompt. In a discussion about a four-day workweek test for software engineers, Taylor predicts exact results from testing a Monday-through-Thursday workweek even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Confirmation bias choice	**B.** Motivated reasoning choice
C. Anchoring choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, workplace, d2

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-037 | Level 2 | Answer A

Prompt. In a discussion about larger grocery unit-price labels, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Availability bias choice
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, retail, d2

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-038 | Level 2 | Answer B

Prompt. In a discussion about late fines on children's books, Casey praises weak evidence supporting waiving late fines for children's books because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Bandwagon effect choice	**B.** Motivated reasoning correct
C. Overconfidence bias choice	**D.** Availability bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, public services, d2

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

cognitive_biases-039 | Level 2 | Answer C

Prompt. In a discussion about two-factor login for site administrators, Jordan supports requiring two-factor login for site administrators after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Overconfidence bias choice	**B.** Confirmation bias choice
C. Bandwagon effect correct	**D.** Sunk cost bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, technology, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

C feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

cognitive_biases-040 | Level 2 | Answer D

Prompt. In a discussion about brighter streetlights on Maple Street, Riley reads only comments praising the plan to add brighter LED streetlights on Maple Street and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Motivated reasoning choice	**B.** Availability bias choice
C. Overconfidence bias choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, public safety, d2

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-041 | Level 2 | Answer C

Prompt. In a discussion about peer tutoring for first-year statistics students, Maya hears one vivid story about first-year statistics students and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Confirmation bias choice	**B.** Bandwagon effect choice
C. Availability bias correct	**D.** Anchoring choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, education, d2

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

cognitive_biases-042 | Level 2 | Answer D

Prompt. In a discussion about calorie labels on restaurant menus, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Overconfidence bias choice	**B.** Bandwagon effect choice
C. Motivated reasoning choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, nutrition, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-043 | Level 2 | Answer B

Prompt. In a discussion about bank overdraft warning texts, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Bandwagon effect choice	**B.** Sunk cost bias correct
C. Availability bias choice	**D.** Anchoring choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, finance, d2

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

cognitive_biases-044 | Level 2 | Answer A

Prompt. In a discussion about timed-entry passes for weekend park trails, Taylor predicts exact results from using timed-entry passes for weekend trail visits even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Overconfidence bias correct	**B.** Bandwagon effect choice
C. Availability bias choice	**D.** Anchoring choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, environment, d2

A feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

cognitive_biases-045 | Level 2 | Answer D

Prompt. In a discussion about free Friday museum admission, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Availability bias choice	**B.** Bandwagon effect choice
C. Confirmation bias choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, culture, d2

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-046 | Level 2 | Answer C

Prompt. In a discussion about youth soccer concussion checks, Casey praises weak evidence supporting adding mandatory sideline concussion checks because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Confirmation bias choice	**B.** Overconfidence bias choice
C. Motivated reasoning correct	**D.** Anchoring choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, sports, d2

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

cognitive_biases-047 | Level 2 | Answer B

Prompt. In a discussion about same-day donation receipts, Jordan supports sending donation receipts within one day after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Status quo bias choice	**B.** Bandwagon effect correct
C. Overconfidence bias choice	**D.** Motivated reasoning choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, nonprofit, d2

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

cognitive_biases-048 | Level 2 | Answer A

Prompt. In a discussion about warehouse ergonomic training, Riley reads only comments praising the plan to offer monthly lifting-safety and ergonomic training and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Availability bias choice
C. Status quo bias choice	**D.** Bandwagon effect choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, workplace safety, d2

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-049 | Level 2 | Answer D

Prompt. In a discussion about apartment-lobby compost bins, Maya hears one vivid story about apartment residents and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Overconfidence bias choice	**B.** Confirmation bias choice
C. Bandwagon effect choice	**D.** Availability bias correct

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, environment, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

cognitive_biases-050 | Level 2 | Answer C

Prompt. In a discussion about private-by-default app profiles, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Bandwagon effect choice	**B.** Availability bias choice
C. Anchoring correct	**D.** Overconfidence bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, technology, d2

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

cognitive_biases-051 | Level 2 | Answer B

Prompt. In a discussion about same-day clinic appointment slots, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Confirmation bias choice	**B.** Sunk cost bias correct
C. Bandwagon effect choice	**D.** Availability bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, health, d2

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

B feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

cognitive_biases-052 | Level 2 | Answer A

Prompt. In a discussion about seat-zone airline boarding, Taylor predicts exact results from boarding passengers by seat zone even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Overconfidence bias correct	**B.** Anchoring choice
C. Bandwagon effect choice	**D.** Status quo bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, travel, d2

A feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

cognitive_biases-053 | Level 2 | Answer C

Prompt. In a discussion about an online apartment repair portal, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Overconfidence bias choice	**B.** Anchoring choice
C. Status quo bias correct	**D.** Availability bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, housing, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows status quo bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

cognitive_biases-054 | Level 2 | Answer D

Prompt. In a discussion about fruit placement in a school cafeteria line, Casey praises weak evidence supporting moving fruit bowls to the front of the cafeteria line because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Confirmation bias choice
C. Overconfidence bias choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, food, d2

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-055 | Level 2 | Answer A

Prompt. In a discussion about weekly call-center script coaching, Jordan supports giving support agents weekly script coaching after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Overconfidence bias choice
C. Anchoring choice	**D.** Availability bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, customer support, d2

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows bandwagon effect.
Study link: CogBias - Availability heuristic

cognitive_biases-056 | Level 2 | Answer B

Prompt. In a discussion about household water-leak alerts, Riley reads only comments praising the plan to send automatic household water-leak alerts and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Motivated reasoning choice	**B.** Confirmation bias correct
C. Status quo bias choice	**D.** Overconfidence bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, utilities, d2

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-057 | Level 2 | Answer C

Prompt. In a discussion about body-camera activation reminders, Maya hears one vivid story about patrol officers and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Overconfidence bias choice	**B.** Bandwagon effect choice
C. Availability bias correct	**D.** Anchoring choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, governance, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

cognitive_biases-058 | Level 2 | Answer D

Prompt. In a discussion about county mail-ballot tracking, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Motivated reasoning choice	**B.** Overconfidence bias choice
C. Sunk cost bias choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, election administration, d2

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-059 | Level 2 | Answer A

Prompt. In a discussion about language-learning spaced-review prompts, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Bandwagon effect choice
C. Overconfidence bias choice	**D.** Motivated reasoning choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, learning, d2

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-060 | Level 2 | Answer B

Prompt. In a discussion about a beginner gym orientation, Taylor predicts exact results from offering a beginner gym orientation even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Sunk cost bias choice	**B.** Overconfidence bias correct
C. Availability bias choice	**D.** Confirmation bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, fitness, d2

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

cognitive_biases-061 | Level 2 | Answer A

Prompt. In a discussion about safe-driving feedback for policyholders, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Motivated reasoning choice
C. Confirmation bias choice	**D.** Availability bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, insurance, d2

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

cognitive_biases-062 | Level 2 | Answer B

Prompt. In a discussion about top-of-article correction boxes, Casey praises weak evidence supporting placing corrections at the top of articles because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Motivated reasoning correct
C. Status quo bias choice	**D.** Bandwagon effect choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, media, d2

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

cognitive_biases-063 | Level 2 | Answer D

Prompt. In a discussion about clearer farmers market price signs, Jordan supports requiring clearer price signs at vendor stalls after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Overconfidence bias choice	**B.** Status quo bias choice
C. Sunk cost bias choice	**D.** Bandwagon effect correct

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, local commerce, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

cognitive_biases-064 | Level 2 | Answer C

Prompt. In a discussion about hotel quiet-hours text reminders, Riley reads only comments praising the plan to send quiet-hours text reminders to hotel guests and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Overconfidence bias choice	**B.** Availability bias choice
C. Confirmation bias correct	**D.** Bandwagon effect choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, hospitality, d2

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

cognitive_biases-065 | Level 3 | Answer D

Prompt. In a discussion about evening bus service for late-shift workers, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Motivated reasoning choice	**B.** Availability bias choice
C. Sunk cost bias choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, transportation, d3

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-066 | Level 3 | Answer C

Prompt. In a discussion about classroom phone lockers, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Confirmation bias choice	**B.** Bandwagon effect choice
C. Sunk cost bias correct	**D.** Availability bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, education, d3

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

cognitive_biases-067 | Level 3 | Answer B

Prompt. In a discussion about medication reminder texts for older patients, Taylor predicts exact results from sending medication reminder texts before evening doses even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Motivated reasoning choice	**B.** Overconfidence bias correct
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, health, d3

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-068 | Level 3 | Answer A

Prompt. In a discussion about a four-day workweek test for software engineers, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Anchoring choice
C. Confirmation bias choice	**D.** Overconfidence bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, workplace, d3

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows status quo bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-069 | Level 3 | Answer D

Prompt. In a discussion about larger grocery unit-price labels, Casey praises weak evidence supporting adding larger unit-price labels on shelf tags because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Sunk cost bias choice	**B.** Bandwagon effect choice
C. Overconfidence bias choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, retail, d3

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows motivated reasoning.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-070 | Level 3 | Answer C

Prompt. In a discussion about late fines on children's books, Jordan supports waiving late fines for children's books after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Overconfidence bias choice	**B.** Anchoring choice
C. Bandwagon effect correct	**D.** Confirmation bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, public services, d3

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

cognitive_biases-071 | Level 3 | Answer B

Prompt. In a discussion about two-factor login for site administrators, Riley reads only comments praising the plan to require two-factor login for site administrators and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Overconfidence bias choice	**B.** Confirmation bias correct
C. Bandwagon effect choice	**D.** Availability bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, technology, d3

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

cognitive_biases-072 | Level 3 | Answer A

Prompt. In a discussion about brighter streetlights on Maple Street, Maya hears one vivid story about residents on Maple Street and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Availability bias correct	**B.** Status quo bias choice
C. Anchoring choice	**D.** Bandwagon effect choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, public safety, d3

A feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-073 | Level 3 | Answer D

Prompt. In a discussion about peer tutoring for first-year statistics students, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Bandwagon effect choice	**B.** Status quo bias choice
C. Overconfidence bias choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, education, d3

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-074 | Level 3 | Answer C

Prompt. In a discussion about calorie labels on restaurant menus, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Overconfidence bias choice	**B.** Confirmation bias choice
C. Sunk cost bias correct	**D.** Availability bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, nutrition, d3

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows sunk cost bias.
Study link: CogBias - Confirmation bias

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

cognitive_biases-075 | Level 3 | Answer A

Prompt. In a discussion about bank overdraft warning texts, Taylor predicts exact results from sending overdraft warning texts before fees post even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Overconfidence bias correct	**B.** Status quo bias choice
C. Sunk cost bias choice	**D.** Motivated reasoning choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, finance, d3

A feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-076 | Level 3 | Answer B

Prompt. In a discussion about timed-entry passes for weekend park trails, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Confirmation bias choice	**B.** Status quo bias correct
C. Bandwagon effect choice	**D.** Overconfidence bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, environment, d3

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

B feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows status quo bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-077 | Level 3 | Answer C

Prompt. In a discussion about free Friday museum admission, Casey praises weak evidence supporting offering free admission on Fridays because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Availability bias choice	**B.** Anchoring choice
C. Motivated reasoning correct	**D.** Status quo bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, culture, d3

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

cognitive_biases-078 | Level 3 | Answer D

Prompt. In a discussion about youth soccer concussion checks, Jordan supports adding mandatory sideline concussion checks after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Motivated reasoning choice	**B.** Availability bias choice
C. Sunk cost bias choice	**D.** Bandwagon effect correct

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, sports, d3

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows bandwagon effect.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

cognitive_biases-079 | Level 3 | Answer A

Prompt. In a discussion about same-day donation receipts, Riley reads only comments praising the plan to send donation receipts within one day and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Anchoring choice
C. Availability bias choice	**D.** Sunk cost bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, nonprofit, d3

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-080 | Level 3 | Answer B

Prompt. In a discussion about warehouse ergonomic training, Maya hears one vivid story about warehouse staff and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Anchoring choice	**B.** Availability bias correct
C. Overconfidence bias choice	**D.** Status quo bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, workplace safety, d3

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

cognitive_biases-081 | Level 3 | Answer C

Prompt. In a discussion about apartment-lobby compost bins, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Availability bias choice	**B.** Status quo bias choice
C. Anchoring correct	**D.** Overconfidence bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, environment, d3

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

cognitive_biases-082 | Level 3 | Answer D

Prompt. In a discussion about private-by-default app profiles, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Bandwagon effect choice	**B.** Availability bias choice
C. Motivated reasoning choice	**D.** Sunk cost bias correct

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, technology, d3

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

cognitive_biases-083 | Level 3 | Answer C

Prompt. In a discussion about same-day clinic appointment slots, Taylor predicts exact results from reserving same-day appointment slots even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Confirmation bias choice	**B.** Availability bias choice
C. Overconfidence bias correct	**D.** Sunk cost bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, health, d3

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-084 | Level 3 | Answer D

Prompt. In a discussion about seat-zone airline boarding, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Bandwagon effect choice	**B.** Availability bias choice
C. Sunk cost bias choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, travel, d3

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-085 | Level 3 | Answer B

Prompt. In a discussion about an online apartment repair portal, Casey praises weak evidence supporting launching an online apartment repair portal because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Motivated reasoning correct
C. Availability bias choice	**D.** Confirmation bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, housing, d3

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

cognitive_biases-086 | Level 3 | Answer A

Prompt. In a discussion about fruit placement in a school cafeteria line, Jordan supports moving fruit bowls to the front of the cafeteria line after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Overconfidence bias choice
C. Availability bias choice	**D.** Motivated reasoning choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, food, d3

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows bandwagon effect.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

cognitive_biases-087 | Level 3 | Answer D

Prompt. In a discussion about weekly call-center script coaching, Riley reads only comments praising the plan to give support agents weekly script coaching and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Overconfidence bias choice	**B.** Anchoring choice
C. Motivated reasoning choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, customer support, d3

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-088 | Level 3 | Answer C

Prompt. In a discussion about household water-leak alerts, Maya hears one vivid story about local homeowners and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Anchoring choice	**B.** Confirmation bias choice
C. Availability bias correct	**D.** Overconfidence bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, utilities, d3

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-089 | Level 3 | Answer B

Prompt. In a discussion about body-camera activation reminders, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Bandwagon effect choice	**B.** Anchoring correct
C. Confirmation bias choice	**D.** Sunk cost bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, governance, d3

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows anchoring.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

cognitive_biases-090 | Level 3 | Answer A

Prompt. In a discussion about county mail-ballot tracking, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Anchoring choice
C. Availability bias choice	**D.** Bandwagon effect choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, election administration, d3

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-091 | Level 3 | Answer D

Prompt. In a discussion about language-learning spaced-review prompts, Taylor predicts exact results from sending spaced-review prompts for language vocabulary even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Anchoring choice	**B.** Sunk cost bias choice
C. Confirmation bias choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, learning, d3

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-092 | Level 3 | Answer C

Prompt. In a discussion about a beginner gym orientation, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Bandwagon effect choice	**B.** Motivated reasoning choice
C. Status quo bias correct	**D.** Sunk cost bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, fitness, d3

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-093 | Level 3 | Answer B

Prompt. In a discussion about safe-driving feedback for policyholders, Casey praises weak evidence supporting sending weekly safe-driving feedback because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Status quo bias choice	**B.** Motivated reasoning correct
C. Sunk cost bias choice	**D.** Confirmation bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, insurance, d3

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows motivated reasoning.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

cognitive_biases-094 | Level 3 | Answer A

Prompt. In a discussion about top-of-article correction boxes, Jordan supports placing corrections at the top of articles after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Availability bias choice
C. Sunk cost bias choice	**D.** Status quo bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, media, d3

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows bandwagon effect.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

cognitive_biases-095 | Level 3 | Answer A

Prompt. In a discussion about clearer farmers market price signs, Riley reads only comments praising the plan to require clearer price signs at vendor stalls and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Status quo bias choice
C. Availability bias choice	**D.** Overconfidence bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, local commerce, d3

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-096 | Level 3 | Answer B

Prompt. In a discussion about hotel quiet-hours text reminders, Maya hears one vivid story about overnight hotel guests and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Overconfidence bias choice	**B.** Availability bias correct
C. Sunk cost bias choice	**D.** Status quo bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, hospitality, d3

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

B feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

cognitive_biases-097 | Level 4 | Answer A

Prompt. In a discussion about evening bus service for late-shift workers, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Status quo bias choice
C. Bandwagon effect choice	**D.** Anchoring choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, transportation, d4

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows sunk cost bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

cognitive_biases-098 | Level 4 | Answer B

Prompt. In a discussion about classroom phone lockers, Taylor predicts exact results from requiring phone lockers during class even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Availability bias choice	**B.** Overconfidence bias correct
C. Bandwagon effect choice	**D.** Sunk cost bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, education, d4

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-099 | Level 4 | Answer C

Prompt. In a discussion about medication reminder texts for older patients, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Confirmation bias choice	**B.** Availability bias choice
C. Status quo bias correct	**D.** Overconfidence bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, health, d4

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows status quo bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-100 | Level 4 | Answer D

Prompt. In a discussion about a four-day workweek test for software engineers, Casey praises weak evidence supporting testing a Monday-through-Thursday workweek because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Availability bias choice
C. Overconfidence bias choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, workplace, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-101 | Level 4 | Answer A

Prompt. In a discussion about larger grocery unit-price labels, Jordan supports adding larger unit-price labels on shelf tags after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Sunk cost bias choice
C. Anchoring choice	**D.** Confirmation bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, retail, d4

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

cognitive_biases-102 | Level 4 | Answer B

Prompt. In a discussion about late fines on children's books, Riley reads only comments praising the plan to waive late fines for children's books and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Bandwagon effect choice	**B.** Confirmation bias correct
C. Sunk cost bias choice	**D.** Overconfidence bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, public services, d4

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-103 | Level 4 | Answer C

Prompt. In a discussion about two-factor login for site administrators, Maya hears one vivid story about site administrators and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Anchoring choice	**B.** Confirmation bias choice
C. Availability bias correct	**D.** Sunk cost bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, technology, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-104 | Level 4 | Answer D

Prompt. In a discussion about brighter streetlights on Maple Street, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Status quo bias choice	**B.** Confirmation bias choice
C. Overconfidence bias choice	**D.** Anchoring correct

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, public safety, d4

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows anchoring.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

D feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

cognitive_biases-105 | Level 4 | Answer A

Prompt. In a discussion about peer tutoring for first-year statistics students, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Anchoring choice
C. Overconfidence bias choice	**D.** Status quo bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, education, d4

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows sunk cost bias.
Study link: CogBias - Status quo bias

cognitive_biases-106 | Level 4 | Answer B

Prompt. In a discussion about calorie labels on restaurant menus, Taylor predicts exact results from showing calorie labels on printed lunch menus even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Anchoring choice	**B.** Overconfidence bias correct
C. Motivated reasoning choice	**D.** Status quo bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, nutrition, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

cognitive_biases-107 | Level 4 | Answer D

Prompt. In a discussion about bank overdraft warning texts, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Anchoring choice	**B.** Availability bias choice
C. Motivated reasoning choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, finance, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-108 | Level 4 | Answer C

Prompt. In a discussion about timed-entry passes for weekend park trails, Casey praises weak evidence supporting using timed-entry passes for weekend trail visits because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Sunk cost bias choice	**B.** Overconfidence bias choice
C. Motivated reasoning correct	**D.** Anchoring choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, environment, d4

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows motivated reasoning.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

cognitive_biases-109 | Level 4 | Answer B

Prompt. In a discussion about free Friday museum admission, Jordan supports offering free admission on Fridays after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Anchoring choice	**B.** Bandwagon effect correct
C. Overconfidence bias choice	**D.** Status quo bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, culture, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

cognitive_biases-110 | Level 4 | Answer A

Prompt. In a discussion about youth soccer concussion checks, Riley reads only comments praising the plan to add mandatory sideline concussion checks and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Availability bias choice
C. Bandwagon effect choice	**D.** Sunk cost bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, sports, d4

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-111 | Level 4 | Answer D

Prompt. In a discussion about same-day donation receipts, Maya hears one vivid story about first-time donors and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Anchoring choice	**B.** Overconfidence bias choice
C. Confirmation bias choice	**D.** Availability bias correct

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, nonprofit, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

cognitive_biases-112 | Level 4 | Answer C

Prompt. In a discussion about warehouse ergonomic training, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Sunk cost bias choice	**B.** Status quo bias choice
C. Anchoring correct	**D.** Bandwagon effect choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, workplace safety, d4

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

cognitive_biases-113 | Level 4 | Answer B

Prompt. In a discussion about apartment-lobby compost bins, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Overconfidence bias choice	**B.** Sunk cost bias correct
C. Bandwagon effect choice	**D.** Status quo bias choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, environment, d4

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

B feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows sunk cost bias.
Study link: CogBias - Status quo bias

cognitive_biases-114 | Level 4 | Answer A

Prompt. In a discussion about private-by-default app profiles, Taylor predicts exact results from making new user profiles private by default even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Overconfidence bias correct	**B.** Status quo bias choice
C. Motivated reasoning choice	**D.** Availability bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, technology, d4

A feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows overconfidence bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

cognitive_biases-115 | Level 4 | Answer D

Prompt. In a discussion about same-day clinic appointment slots, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Availability bias choice	**B.** Confirmation bias choice
C. Motivated reasoning choice	**D.** Status quo bias correct

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, health, d4

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

cognitive_biases-116 | Level 4 | Answer C

Prompt. In a discussion about seat-zone airline boarding, Casey praises weak evidence supporting boarding passengers by seat zone because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Availability bias choice	**B.** Bandwagon effect choice
C. Motivated reasoning correct	**D.** Overconfidence bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, travel, d4

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

cognitive_biases-117 | Level 4 | Answer C

Prompt. In a discussion about an online apartment repair portal, Jordan supports launching an online apartment repair portal after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Anchoring choice	**B.** Motivated reasoning choice
C. Bandwagon effect correct	**D.** Status quo bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, housing, d4

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

cognitive_biases-118 | Level 4 | Answer D

Prompt. In a discussion about fruit placement in a school cafeteria line, Riley reads only comments praising the plan to move fruit bowls to the front of the cafeteria line and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Overconfidence bias choice	**B.** Motivated reasoning choice
C. Anchoring choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, food, d4

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-119 | Level 4 | Answer A

Prompt. In a discussion about weekly call-center script coaching, Maya hears one vivid story about support agents and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Availability bias correct	**B.** Anchoring choice
C. Confirmation bias choice	**D.** Status quo bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, customer support, d4

A feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows availability bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

cognitive_biases-120 | Level 4 | Answer B

Prompt. In a discussion about household water-leak alerts, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Motivated reasoning choice	**B.** Anchoring correct
C. Status quo bias choice	**D.** Availability bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, utilities, d4

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

cognitive_biases-121 | Level 4 | Answer C

Prompt. In a discussion about body-camera activation reminders, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Availability bias choice	**B.** Overconfidence bias choice
C. Sunk cost bias correct	**D.** Motivated reasoning choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, governance, d4

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-122 | Level 4 | Answer D

Prompt. In a discussion about county mail-ballot tracking, Taylor predicts exact results from offering online mail-ballot tracking even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Availability bias choice	**B.** Sunk cost bias choice
C. Motivated reasoning choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, election administration, d4

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows overconfidence bias.
Study link: CogBias - Motivated reasoning

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-123 | Level 4 | Answer A

Prompt. In a discussion about language-learning spaced-review prompts, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Confirmation bias choice
C. Bandwagon effect choice	**D.** Anchoring choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, learning, d4

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows status quo bias.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

cognitive_biases-124 | Level 4 | Answer B

Prompt. In a discussion about a beginner gym orientation, Casey praises weak evidence supporting offering a beginner gym orientation because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Overconfidence bias choice	**B.** Motivated reasoning correct
C. Status quo bias choice	**D.** Confirmation bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, fitness, d4

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

cognitive_biases-125 | Level 4 | Answer A

Prompt. In a discussion about safe-driving feedback for policyholders, Jordan supports sending weekly safe-driving feedback after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Anchoring choice
C. Status quo bias choice	**D.** Confirmation bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, insurance, d4

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

cognitive_biases-126 | Level 4 | Answer B

Prompt. In a discussion about top-of-article correction boxes, Riley reads only comments praising the plan to place corrections at the top of articles and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Status quo bias choice	**B.** Confirmation bias correct
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, media, d4

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-127 | Level 4 | Answer D

Prompt. In a discussion about clearer farmers market price signs, Maya hears one vivid story about weekend farmers market shoppers and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Sunk cost bias choice	**B.** Status quo bias choice
C. Confirmation bias choice	**D.** Availability bias correct

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, local commerce, d4

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

cognitive_biases-128 | Level 4 | Answer C

Prompt. In a discussion about hotel quiet-hours text reminders, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Status quo bias choice	**B.** Motivated reasoning choice
C. Anchoring correct	**D.** Sunk cost bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, hospitality, d4

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

cognitive_biases-129 | Level 5 | Answer D

Prompt. In a discussion about evening bus service for late-shift workers, Taylor predicts exact results from extending evening bus service until midnight even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Confirmation bias choice	**B.** Bandwagon effect choice
C. Sunk cost bias choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, transportation, d5

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-130 | Level 5 | Answer C

Prompt. In a discussion about classroom phone lockers, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Availability bias choice	**B.** Motivated reasoning choice
C. Status quo bias correct	**D.** Bandwagon effect choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, education, d5

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-131 | Level 5 | Answer B

Prompt. In a discussion about medication reminder texts for older patients, Casey praises weak evidence supporting sending medication reminder texts before evening doses because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Anchoring choice	**B.** Motivated reasoning correct
C. Availability bias choice	**D.** Status quo bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, health, d5

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows motivated reasoning.
Study link: CogBias - Anchoring effect

B feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows motivated reasoning.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

cognitive_biases-132 | Level 5 | Answer A

Prompt. In a discussion about a four-day workweek test for software engineers, Jordan supports testing a Monday-through-Thursday workweek after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Confirmation bias choice
C. Status quo bias choice	**D.** Motivated reasoning choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, workplace, d5

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

cognitive_biases-133 | Level 5 | Answer D

Prompt. In a discussion about larger grocery unit-price labels, Riley reads only comments praising the plan to add larger unit-price labels on shelf tags and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Status quo bias choice	**B.** Anchoring choice
C. Bandwagon effect choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, retail, d5

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows confirmation bias.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-134 | Level 5 | Answer C

Prompt. In a discussion about late fines on children's books, Maya hears one vivid story about families checking out children's books and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Bandwagon effect choice	**B.** Sunk cost bias choice
C. Availability bias correct	**D.** Overconfidence bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, public services, d5

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows availability bias.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-135 | Level 5 | Answer B

Prompt. In a discussion about two-factor login for site administrators, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Sunk cost bias choice	**B.** Anchoring correct
C. Availability bias choice	**D.** Status quo bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, technology, d5

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

B feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows anchoring.
Study link: CogBias - Status quo bias

cognitive_biases-136 | Level 5 | Answer A

Prompt. In a discussion about brighter streetlights on Maple Street, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Anchoring choice
C. Status quo bias choice	**D.** Bandwagon effect choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, public safety, d5

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows sunk cost bias.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-137 | Level 5 | Answer B

Prompt. In a discussion about peer tutoring for first-year statistics students, Taylor predicts exact results from expanding peer tutoring in statistics even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Availability bias choice	**B.** Overconfidence bias correct
C. Anchoring choice	**D.** Sunk cost bias choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, education, d5

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

B feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows overconfidence bias.
Study link: CogBias - Sunk cost effect

cognitive_biases-138 | Level 5 | Answer A

Prompt. In a discussion about calorie labels on restaurant menus, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Status quo bias correct	**B.** Anchoring choice
C. Motivated reasoning choice	**D.** Availability bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, nutrition, d5

A feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows status quo bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

cognitive_biases-139 | Level 5 | Answer C

Prompt. In a discussion about bank overdraft warning texts, Casey praises weak evidence supporting sending overdraft warning texts before fees post because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Bandwagon effect choice	**B.** Overconfidence bias choice
C. Motivated reasoning correct	**D.** Status quo bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, finance, d5

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

cognitive_biases-140 | Level 5 | Answer A

Prompt. In a discussion about timed-entry passes for weekend park trails, Jordan supports using timed-entry passes for weekend trail visits after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Bandwagon effect correct	**B.** Confirmation bias choice
C. Sunk cost bias choice	**D.** Overconfidence bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, environment, d5

A feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows bandwagon effect.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

cognitive_biases-141 | Level 5 | Answer A

Prompt. In a discussion about free Friday museum admission, Riley reads only comments praising the plan to offer free admission on Fridays and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Confirmation bias correct	**B.** Motivated reasoning choice
C. Anchoring choice	**D.** Bandwagon effect choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, culture, d5

A feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows confirmation bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-142 | Level 5 | Answer B

Prompt. In a discussion about youth soccer concussion checks, Maya hears one vivid story about youth soccer players and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Confirmation bias choice	**B.** Availability bias correct
C. Sunk cost bias choice	**D.** Motivated reasoning choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, sports, d5

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

B feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows availability bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-143 | Level 5 | Answer A

Prompt. In a discussion about same-day donation receipts, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Anchoring correct	**B.** Availability bias choice
C. Motivated reasoning choice	**D.** Overconfidence bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, nonprofit, d5

A feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows anchoring.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

cognitive_biases-144 | Level 5 | Answer C

Prompt. In a discussion about warehouse ergonomic training, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Availability bias choice	**B.** Anchoring choice
C. Sunk cost bias correct	**D.** Bandwagon effect choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, workplace safety, d5

A feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

C feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-145 | Level 5 | Answer A

Prompt. In a discussion about apartment-lobby compost bins, Taylor predicts exact results from placing compost bins in apartment lobbies even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Overconfidence bias correct	**B.** Confirmation bias choice
C. Anchoring choice	**D.** Bandwagon effect choice

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, environment, d5

A feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows overconfidence bias.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-146 | Level 5 | Answer C

Prompt. In a discussion about private-by-default app profiles, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Sunk cost bias choice	**B.** Bandwagon effect choice
C. Status quo bias correct	**D.** Motivated reasoning choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, technology, d5

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows status quo bias.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

C feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

D feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

cognitive_biases-147 | Level 5 | Answer C

Prompt. In a discussion about same-day clinic appointment slots, Casey praises weak evidence supporting reserving same-day appointment slots because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Confirmation bias choice	**B.** Overconfidence bias choice
C. Motivated reasoning correct	**D.** Sunk cost bias choice

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, health, d5

A feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows motivated reasoning.
Study link: CogBias - Confirmation bias

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

C feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows motivated reasoning.
Study link: CogBias - Sunk cost effect

cognitive_biases-148 | Level 5 | Answer D

Prompt. In a discussion about seat-zone airline boarding, Jordan supports boarding passengers by seat zone after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Sunk cost bias choice	**B.** Status quo bias choice
C. Anchoring choice	**D.** Bandwagon effect correct

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, travel, d5

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows bandwagon effect.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows bandwagon effect.
Study link: CogBias - Anchoring effect

D feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

cognitive_biases-149 | Level 5 | Answer D

Prompt. In a discussion about an online apartment repair portal, Riley reads only comments praising the plan to launch an online apartment repair portal and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Sunk cost bias choice	**B.** Overconfidence bias choice
C. Availability bias choice	**D.** Confirmation bias correct

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, housing, d5

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows confirmation bias.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows confirmation bias.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

D feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

cognitive_biases-150 | Level 5 | Answer C

Prompt. In a discussion about fruit placement in a school cafeteria line, Maya hears one vivid story about middle-school students and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Status quo bias choice	**B.** Motivated reasoning choice
C. Availability bias correct	**D.** Overconfidence bias choice

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, food, d5

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows availability bias.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows availability bias.
Study link: CogBias - Motivated reasoning

C feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

cognitive_biases-151 | Level 5 | Answer B

Prompt. In a discussion about weekly call-center script coaching, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Bandwagon effect choice	**B.** Anchoring correct
C. Overconfidence bias choice	**D.** Sunk cost bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, customer support, d5

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows anchoring.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

cognitive_biases-152 | Level 5 | Answer A

Prompt. In a discussion about household water-leak alerts, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Sunk cost bias correct	**B.** Overconfidence bias choice
C. Motivated reasoning choice	**D.** Bandwagon effect choice

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is A because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, utilities, d5

A feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows sunk cost bias.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

D feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows sunk cost bias.
Study link: CogBias - Bandwagon effect

cognitive_biases-153 | Level 5 | Answer D

Prompt. In a discussion about body-camera activation reminders, Taylor predicts exact results from sending body-camera activation reminders before patrol shifts even though no similar test has been run. Which thinking bias is shown in Taylor's thinking?

A. Bandwagon effect choice	**B.** Anchoring choice
C. Availability bias choice	**D.** Overconfidence bias correct

Core explanation. The person shows more certainty than the evidence supports.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Overconfidence bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, overconfidence, governance, d5

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows overconfidence bias.
Study link: CogBias - Bandwagon effect

B feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows overconfidence bias.
Study link: CogBias - Anchoring effect

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows overconfidence bias.
Study link: CogBias - Availability heuristic

D feedback (Correct): Correct. The person shows more certainty than the evidence supports. The choice names the bias shown by the person's thinking.
Study link: CogBias - Overconfidence effect

cognitive_biases-154 | Level 5 | Answer B

Prompt. In a discussion about county mail-ballot tracking, Morgan rejects the proposal mainly because the current system feels familiar. Which thinking bias is shown in Morgan's thinking?

A. Motivated reasoning choice	**B.** Status quo bias correct
C. Bandwagon effect choice	**D.** Availability bias choice

Core explanation. The current option is favored because it is already in place.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Status quo bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, status-quo, election administration, d5

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows status quo bias.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. The current option is favored because it is already in place. The choice names the bias shown by the person's thinking.
Study link: CogBias - Status quo bias

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows status quo bias.
Study link: CogBias - Bandwagon effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows status quo bias.
Study link: CogBias - Availability heuristic

cognitive_biases-155 | Level 5 | Answer D

Prompt. In a discussion about language-learning spaced-review prompts, Casey praises weak evidence supporting sending spaced-review prompts for language vocabulary because that conclusion would help Casey's preferred plan. Which thinking bias is shown in Casey's thinking?

A. Status quo bias choice	**B.** Overconfidence bias choice
C. Bandwagon effect choice	**D.** Motivated reasoning correct

Core explanation. The evaluation is shaped by the desired conclusion.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Motivated reasoning names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, motivated-reasoning, learning, d5

A feedback (Distractor): Not quite. Status quo bias is a real bias, but it points to a different pattern: the current option is favored because it is already in place. This scenario shows motivated reasoning.
Study link: CogBias - Status quo bias

B feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows motivated reasoning.
Study link: CogBias - Overconfidence effect

C feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows motivated reasoning.
Study link: CogBias - Bandwagon effect

D feedback (Correct): Correct. The evaluation is shaped by the desired conclusion. The choice names the bias shown by the person's thinking.
Study link: CogBias - Motivated reasoning

cognitive_biases-156 | Level 5 | Answer B

Prompt. In a discussion about a beginner gym orientation, Jordan supports offering a beginner gym orientation after seeing that most classmates or coworkers support it, without checking the evidence. Which thinking bias is shown in Jordan's thinking?

A. Motivated reasoning choice	**B.** Bandwagon effect correct
C. Overconfidence bias choice	**D.** Sunk cost bias choice

Core explanation. The person follows the crowd rather than the reasons.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Bandwagon effect names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, bandwagon, fitness, d5

A feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows bandwagon effect.
Study link: CogBias - Motivated reasoning

B feedback (Correct): Correct. The person follows the crowd rather than the reasons. The choice names the bias shown by the person's thinking.
Study link: CogBias - Bandwagon effect

C feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows bandwagon effect.
Study link: CogBias - Overconfidence effect

D feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows bandwagon effect.
Study link: CogBias - Sunk cost effect

cognitive_biases-157 | Level 5 | Answer B

Prompt. In a discussion about safe-driving feedback for policyholders, Riley reads only comments praising the plan to send weekly safe-driving feedback and ignores equally detailed criticism. Which thinking bias is shown in Riley's thinking?

A. Bandwagon effect choice	**B.** Confirmation bias correct
C. Anchoring choice	**D.** Availability bias choice

Core explanation. The person favors evidence that supports an existing view.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is B because Confirmation bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, confirmation-bias, insurance, d5

A feedback (Distractor): Not quite. Bandwagon effect is a real bias, but it points to a different pattern: the person follows the crowd rather than the reasons. This scenario shows confirmation bias.
Study link: CogBias - Bandwagon effect

B feedback (Correct): Correct. The person favors evidence that supports an existing view. The choice names the bias shown by the person's thinking.
Study link: CogBias - Confirmation bias

C feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows confirmation bias.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows confirmation bias.
Study link: CogBias - Availability heuristic

cognitive_biases-158 | Level 5 | Answer D

Prompt. In a discussion about top-of-article correction boxes, Maya hears one vivid story about newsletter readers and assumes that example shows what usually happens. Which thinking bias is shown in Maya's thinking?

A. Overconfidence bias choice	**B.** Sunk cost bias choice
C. Confirmation bias choice	**D.** Availability bias correct

Core explanation. A memorable example is treated as more common than it may be.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Availability bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, availability-bias, media, d5

A feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows availability bias.
Study link: CogBias - Overconfidence effect

B feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows availability bias.
Study link: CogBias - Sunk cost effect

C feedback (Distractor): Not quite. Confirmation bias is a real bias, but it points to a different pattern: the person favors evidence that supports an existing view. This scenario shows availability bias.
Study link: CogBias - Confirmation bias

D feedback (Correct): Correct. A memorable example is treated as more common than it may be. The choice names the bias shown by the person's thinking.
Study link: CogBias - Availability heuristic

cognitive_biases-159 | Level 5 | Answer C

Prompt. In a discussion about clearer farmers market price signs, Sam sees a first cost guess of $900,000 for the plan. After that, Sam treats $850,000 as cheap without checking what the plan should cost. Which thinking bias is shown in Sam's thinking?

A. Sunk cost bias choice	**B.** Availability bias choice
C. Anchoring correct	**D.** Overconfidence bias choice

Core explanation. Judgment is pulled toward the first number encountered.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is C because Anchoring names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, anchoring, local commerce, d5

A feedback (Distractor): Not quite. Sunk cost bias is a real bias, but it points to a different pattern: past unrecoverable costs are allowed to drive the current decision. This scenario shows anchoring.
Study link: CogBias - Sunk cost effect

B feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows anchoring.
Study link: CogBias - Availability heuristic

C feedback (Correct): Correct. Judgment is pulled toward the first number encountered. The choice names the bias shown by the person's thinking.
Study link: CogBias - Anchoring effect

D feedback (Distractor): Not quite. Overconfidence bias is a real bias, but it points to a different pattern: the person shows more certainty than the evidence supports. This scenario shows anchoring.
Study link: CogBias - Overconfidence effect

cognitive_biases-160 | Level 5 | Answer D

Prompt. In a discussion about hotel quiet-hours text reminders, Avery's team keeps funding the plan because it already spent a year developing it, even after early results look poor. Which thinking bias is shown in Avery's thinking?

A. Anchoring choice	**B.** Motivated reasoning choice
C. Availability bias choice	**D.** Sunk cost bias correct

Core explanation. Past unrecoverable costs are allowed to drive the current decision.

Process commentary. To uncover the answer, identify the mental pull in the scenario. The correct choice is D because Sunk cost bias names the bias pattern shown by the person's thinking.

Tags: cognitive_biases, bias, sunk-cost, hospitality, d5

A feedback (Distractor): Not quite. Anchoring is a real bias, but it points to a different pattern: judgment is pulled toward the first number encountered. This scenario shows sunk cost bias.
Study link: CogBias - Anchoring effect

B feedback (Distractor): Not quite. Motivated reasoning is a real bias, but it points to a different pattern: the evaluation is shaped by the desired conclusion. This scenario shows sunk cost bias.
Study link: CogBias - Motivated reasoning

C feedback (Distractor): Not quite. Availability bias is a real bias, but it points to a different pattern: a memorable example is treated as more common than it may be. This scenario shows sunk cost bias.
Study link: CogBias - Availability heuristic

D feedback (Correct): Correct. Past unrecoverable costs are allowed to drive the current decision. The choice names the bias shown by the person's thinking.
Study link: CogBias - Sunk cost effect

Skill 15

Weigh Tradeoffs and Consequences

What Are the Tradeoffs?

Find the clearest cost, benefit, risk, or second effect. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What does this choice gain, and what does it give up or risk?
Why it matters	Decisions usually buy one good by spending another. Tradeoff thinking keeps benefits, costs, risks, delays, and second effects in the same frame.
Conceptual core	Tradeoff thinking moves students beyond pro-con lists by asking how goods compete. Time, money, attention, privacy, fairness, speed, safety, accuracy, and flexibility can all be scarce. A tradeoff is not merely a downside; it is a relationship between values or resources. Strong tradeoff answers keep the benefit and the cost in one frame.
Student method	Look for what the plan gains and what it uses up or endangers. A tradeoff is not just a downside; it is the connection between competing values or resources.
Analogy	A tradeoff is a budget for attention, money, time, or risk. Spending in one place leaves less to spend somewhere else.
Assessment focus	A good answer shows the competing benefit and cost, risk, delay, or opportunity cost in the same decision.

Teaching Sequence

1. Identify the main benefit the plan seeks.

2. Identify the resource, value, or opportunity it may use up.

3. Look for second effects on people not centered in the proposal.

4. Avoid answers that mention a cost without linking it to the choice.

Common Confusions To Watch For

1. Students may treat any negative fact as a tradeoff even if it is unrelated.

2. Students may ignore opportunity cost because no money is visibly spent.

3. Students may choose the most emotional consequence rather than the clearest competing value.

Teacher Prompts

1. What is the plan trying to improve?

2. What could get worse, receive less attention, or become riskier?

3. Who benefits, who pays, and who carries the risk?

Worked Example

Scenario	A school wants more test-prep time before exams by reducing open reading time.
Teacher think-aloud	The plan may improve short-term test practice, but it spends time that could support independent reading, curiosity, and long-term literacy. That is the tradeoff.
Student takeaway	A tradeoff names both the gain and what is spent or risked to get it.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A school has 60 minutes each week for optional study activities. It proposes moving 30 minutes from open reading to test preparation. Teachers expect more exam practice, but no evidence yet shows a score gain. Students who rely on school reading time would lose half that time.

What To Do

1. Make three labelled lines: possible benefit, cost, and affected group. Use the facts and distinguish an expected benefit from a demonstrated result.

2. Propose one alternative allocation of the 60 minutes and explain its tradeoff.

3. Write one question the school should answer before choosing a plan.

Check before reading the answer. Do all allocations total 60 minutes? Have you named who bears the cost rather than calling the proposal simply 'good' or 'bad'?

Model Answer

Possible benefit: more exam practice, with score improvement still unproven. Cost: 30 fewer minutes of open reading. Affected group: especially students dependent on school reading time. An alternative is 15 minutes of preparation and 45 of reading; it preserves more reading but provides less preparation. Ask whether a trial shows gains large enough to justify the lost reading opportunity.

Why it is adequate. It makes the limited resource explicit and compares benefits, costs, and affected students without inventing guaranteed gains.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

tradeoffs-001 | Level 1 | Answer D

Prompt. The city council can extend evening bus service until midnight, which may reduce late-shift commute complaints. But the plan requires staff time that could be used for other transportation work. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the new buses were repainted blue, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce late-shift commute complaints, while leaving costs and resource limits for later. choice	**D.** The tradeoff is that the plan may reduce late-shift commute complaints, but it also has the resource cost named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, transportation, d1

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-002 | Level 1 | Answer C

Prompt. The school board can require phone lockers during class, which may reduce classroom disruption reports. But the plan requires staff time that could be used for other education work. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the lockers are installed near the gym, because concrete details are easier to inspect than resource limits. choice
C. The question is whether reducing classroom disruption reports is worth the resources the plan would use, not just whether the benefit sounds good. correct	**D.** The decision should focus only on whether the plan might reduce classroom disruption reports, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d1

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-003 | Level 1 | Answer B

Prompt. The hospital can send medication reminder texts before evening doses, which may reduce missed-dose reports. But the plan requires staff time that could be used for other health work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the text messages use a green pill icon, because concrete details are easier to inspect than resource limits. choice	**B.** A fair judgment counts both the possible improvement in missed-dose reports and the resources the plan would use. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce missed-dose reports, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-004 | Level 1 | Answer A

Prompt. The company can test a Monday-through-Thursday workweek, which may reduce staff resignations. But the plan requires staff time that could be used for other workplace work. Which statement best names the tradeoff?

A. The plan may help software engineers, but another useful need may get less support from the same resources. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce staff resignations, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the test calendar starts on a Monday, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-005 | Level 1 | Answer D

Prompt. The grocery chain can add larger unit-price labels on shelf tags, which may reduce shopper overpayment complaints. But the plan requires staff time that could be used for other retail work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce shopper overpayment complaints, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the shelf labels use bold black numbers, because concrete details are easier to inspect than resource limits. choice	**D.** Both sides stay in view: possible improvement in shopper overpayment complaints and limited resources for other needs. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, retail, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-006 | Level 1 | Answer C

Prompt. The library can waive late fines for children's books, which may increase library card renewals. But the plan requires staff time that could be used for other public services work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the children's-book checkout desk moved six feet, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The possible gain is increasing library card renewals, and the cost is the resource limit described in the prompt. correct	**D.** The decision should focus only on whether the plan might increase library card renewals, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public services, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-007 | Level 1 | Answer B

Prompt. The platform can require two-factor login for site administrators, which may reduce admin account takeovers. But the plan requires staff time that could be used for other technology work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce admin account takeovers, while leaving costs and resource limits for later. choice	**B.** The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct
C. The main tradeoff is the visible side detail: the login button changed from green to blue, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-008 | Level 1 | Answer A

Prompt. The neighborhood association can add brighter LED streetlights on Maple Street, which may reduce reported thefts. But the plan requires staff time that could be used for other public safety work. Which statement best names the tradeoff?

A. The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct	**B.** The decision should focus only on whether the plan might reduce reported thefts, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the new light poles are made of aluminum, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public safety, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-009 | Level 1 | Answer D

Prompt. The university can expand peer tutoring in statistics, which may increase course pass rates. But the plan requires staff time that could be used for other education work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase course pass rates, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the tutoring room has new chairs, because concrete details are easier to inspect than resource limits. choice	**D.** The possible help is real, but the plan may push another need or group aside while resources are limited. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-010 | Level 1 | Answer C

Prompt. The restaurant group can show calorie labels on printed lunch menus, which may reduce dessert orders. But the plan requires staff time that could be used for other nutrition work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce dessert orders, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the lunch menus are printed on thicker paper, because concrete details are easier to inspect than resource limits. choice
C. The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nutrition, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-011 | Level 1 | Answer C

Prompt. The bank can send overdraft warning texts before fees post, which may reduce overdraft fees. But the plan requires staff time that could be used for other finance work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce overdraft fees, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the warning texts arrive from a short code, because concrete details are easier to inspect than resource limits. choice
C. The tradeoff is between reducing overdraft fees and the resource cost named in the prompt. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, finance, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-012 | Level 1 | Answer D

Prompt. The park service can use timed-entry passes for weekend trail visits, which may reduce trail crowding complaints. But the plan requires staff time that could be used for other environment work. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce trail crowding complaints, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the digital passes include a small trail map, because concrete details are easier to inspect than resource limits. choice	**D.** The tradeoff compares the result people want with the resources the plan would take from other work. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d1

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-013 | Level 1 | Answer A

Prompt. The museum can offer free admission on Fridays, which may increase family visits. But the plan requires staff time that could be used for other culture work. Which statement best names the tradeoff?

A. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might increase family visits, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the Friday tickets are scanned at the east door, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, culture, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-014 | Level 1 | Answer B

Prompt. The sports league can add mandatory sideline concussion checks, which may reduce repeat head injuries. But the plan requires staff time that could be used for other sports work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce repeat head injuries, while leaving costs and resource limits for later. choice	**B.** One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the concussion checklist is printed on yellow paper, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, sports, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-015 | Level 1 | Answer C

Prompt. The nonprofit can send donation receipts within one day, which may increase donor retention. But the plan requires staff time that could be used for other nonprofit work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase donor retention, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct	**D.** The main tradeoff is the visible side detail: the receipt email subject line changed, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nonprofit, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-016 | Level 1 | Answer D

Prompt. The warehouse can offer monthly lifting-safety and ergonomic training, which may reduce back-injury claims. But the plan requires staff time that could be used for other workplace safety work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the training room has a ceiling-mounted projector, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce back-injury claims, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The warehouse might get a better result, but only by accepting the resource cost described in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace safety, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-017 | Level 1 | Answer A

Prompt. The city sanitation office can place compost bins in apartment lobbies, which may reduce landfill waste from participating buildings. But the plan requires staff time that could be used for other environment work. Which statement best names the tradeoff?

A. Reducing landfill waste from participating buildings matters, but so do the resources used by the plan and not used elsewhere. correct	**B.** The main tradeoff is the visible side detail: the lobby compost bins have foot pedals, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce landfill waste from participating buildings, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-018 | Level 1 | Answer B

Prompt. The app maker can make new user profiles private by default, which may reduce publicly visible profiles. But the plan requires staff time that could be used for other technology work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce publicly visible profiles, while leaving costs and resource limits for later. choice	**B.** The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the privacy screen uses a shield icon, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-019 | Level 1 | Answer A

Prompt. The clinic can reserve same-day appointment slots, which may reduce patient no-show rates. But the plan requires staff time that could be used for other health work. Which statement best names the tradeoff?

A. The decision trades a possible gain for primary-care patients against what may be delayed elsewhere. correct	**B.** The decision should focus only on whether the plan might reduce patient no-show rates, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the appointment cards are white, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-020 | Level 1 | Answer B

Prompt. The airline can board passengers by seat zone, which may reduce average boarding time. But the plan requires staff time that could be used for other travel work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the gate signs are backlit, because concrete details are easier to inspect than resource limits. choice	**B.** The upside is reducing average boarding time; the limit is that resources still have to be shared. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce average boarding time, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, travel, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-021 | Level 1 | Answer D

Prompt. The landlord can launch an online apartment repair portal, which may reduce unresolved repair requests. But the plan requires staff time that could be used for other housing work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce unresolved repair requests, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the repair portal uses a house logo, because concrete details are easier to inspect than resource limits. choice	**D.** The plan could help with unresolved repair requests, but it would also use limited resources named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, housing, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-022 | Level 1 | Answer C

Prompt. The cafeteria can move fruit bowls to the front of the cafeteria line, which may increase fruit purchases. But the plan requires staff time that could be used for other food work. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might increase fruit purchases, while leaving costs and resource limits for later. choice
C. The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct	**D.** The main tradeoff is the visible side detail: the fruit bowls are ceramic, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, food, d1

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-023 | Level 1 | Answer B

Prompt. The call center can give support agents weekly script coaching, which may reduce customer complaint rates. But the plan requires staff time that could be used for other customer support work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce customer complaint rates, while leaving costs and resource limits for later. choice	**B.** The result could improve, but that does not erase the cost side of the decision. correct
C. The main tradeoff is the visible side detail: the coaching slides use blue headers, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, customer support, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-024 | Level 1 | Answer A

Prompt. The water utility can send automatic household water-leak alerts, which may reduce average household water use. But the plan requires staff time that could be used for other utilities work. Which statement best names the tradeoff?

A. Choosing this plan may help one problem while leaving less support for another useful need. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the water-leak alert screen includes a blue droplet icon, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce average household water use, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, utilities, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-025 | Level 1 | Answer D

Prompt. The police department can send body-camera activation reminders before patrol shifts, which may reduce missing-camera-footage reports. But the plan requires staff time that could be used for other governance work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the reminder tone is two beeps, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce missing-camera-footage reports, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The plan may improve something important, but it still has to compete with other needs for limited support. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, governance, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-026 | Level 1 | Answer C

Prompt. The election office can offer online mail-ballot tracking, which may reduce phone calls asking ballot status. But the plan requires staff time that could be used for other election administration work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the ballot-tracking page uses county colors, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce phone calls asking ballot status, while leaving costs and resource limits for later. choice
C. The tradeoff is that the plan may reduce phone calls asking ballot status, but it also has the resource cost named in the prompt. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, election administration, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-027 | Level 1 | Answer B

Prompt. The tutoring app can send spaced-review prompts for language vocabulary, which may increase vocabulary retention quiz scores. But the plan requires staff time that could be used for other learning work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the review prompts use a bell icon, because concrete details are easier to inspect than resource limits. choice	**B.** The question is whether increasing vocabulary retention quiz scores is worth the resources the plan would use, not just whether the benefit sounds good. correct
C. The decision should focus only on whether the plan might increase vocabulary retention quiz scores, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, learning, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-028 | Level 1 | Answer A

Prompt. The gym can offer a beginner gym orientation, which may reduce new-member cancellations. But the plan requires staff time that could be used for other fitness work. Which statement best names the tradeoff?

A. A fair judgment counts both the possible improvement in new-member cancellations and the resources the plan would use. correct	**B.** The decision should focus only on whether the plan might reduce new-member cancellations, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the orientation mats are black, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, fitness, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-029 | Level 1 | Answer D

Prompt. The insurer can send weekly safe-driving feedback, which may reduce reported minor crashes. But the plan requires staff time that could be used for other insurance work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce reported minor crashes, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the feedback dashboard uses star ratings, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The plan may help auto-insurance policyholders, but another useful need may get less support from the same resources. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, insurance, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-030 | Level 1 | Answer C

Prompt. The newsroom can place corrections at the top of articles, which may increase reader trust ratings. But the plan requires staff time that could be used for other media work. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the correction box has a gray border, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. Both sides stay in view: possible improvement in reader trust ratings and limited resources for other needs. correct	**D.** The decision should focus only on whether the plan might increase reader trust ratings, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, media, d1

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-031 | Level 1 | Answer A

Prompt. The farmers market can require clearer price signs at vendor stalls, which may reduce price disputes. But the plan requires staff time that could be used for other local commerce work. Which statement best names the tradeoff?

A. The possible gain is reducing price disputes, and the cost is the resource limit described in the prompt. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the stall price signs are laminated, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce price disputes, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, local commerce, d1

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-032 | Level 1 | Answer B

Prompt. The hotel can send quiet-hours text reminders to hotel guests, which may reduce noise complaints from guest rooms. But the plan requires staff time that could be used for other hospitality work. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce noise complaints from guest rooms, while leaving costs and resource limits for later. choice	**B.** The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct
C. The main tradeoff is the visible side detail: the quiet-hours text reminder uses a small moon icon, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, hospitality, d1

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

tradeoffs-033 | Level 2 | Answer D

Prompt. The city council can extend evening bus service until midnight, which may reduce late-shift commute complaints. But the plan uses money that could fund a different transportation need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the new buses were repainted blue, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce late-shift commute complaints, while leaving costs and resource limits for later. choice	**D.** The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, transportation, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-034 | Level 2 | Answer B

Prompt. The school board can require phone lockers during class, which may reduce classroom disruption reports. But the plan uses money that could fund a different education need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lockers are installed near the gym, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce classroom disruption reports, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-035 | Level 2 | Answer C

Prompt. The hospital can send medication reminder texts before evening doses, which may reduce missed-dose reports. But the plan uses money that could fund a different health need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce missed-dose reports, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the text messages use a green pill icon, because concrete details are easier to inspect than resource limits. choice
C. The possible help is real, but the plan may push another need or group aside while resources are limited. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-036 | Level 2 | Answer D

Prompt. The company can test a Monday-through-Thursday workweek, which may reduce staff resignations. But the plan uses money that could fund a different workplace need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce staff resignations, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the test calendar starts on a Monday, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-037 | Level 2 | Answer A

Prompt. The grocery chain can add larger unit-price labels on shelf tags, which may reduce shopper overpayment complaints. But the plan uses money that could fund a different retail need. Which statement best names the tradeoff?

A. The possible gain is reducing shopper overpayment complaints, and the cost is the resource limit described in the prompt. correct	**B.** The decision should focus only on whether the plan might reduce shopper overpayment complaints, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the shelf labels use bold black numbers, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, retail, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-038 | Level 2 | Answer B

Prompt. The library can waive late fines for children's books, which may increase library card renewals. But the plan uses money that could fund a different public services need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase library card renewals, while leaving costs and resource limits for later. choice	**B.** The tradeoff compares the result people want with the resources the plan would take from other work. correct
C. The main tradeoff is the visible side detail: the children's-book checkout desk moved six feet, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public services, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-039 | Level 2 | Answer C

Prompt. The platform can require two-factor login for site administrators, which may reduce admin account takeovers. But the plan uses money that could fund a different technology need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the login button changed from green to blue, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**D.** The decision should focus only on whether the plan might reduce admin account takeovers, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-040 | Level 2 | Answer A

Prompt. The neighborhood association can add brighter LED streetlights on Maple Street, which may reduce reported thefts. But the plan uses money that could fund a different public safety need. Which statement best names the tradeoff?

A. One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct	**B.** The decision should focus only on whether the plan might reduce reported thefts, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the new light poles are made of aluminum, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public safety, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-041 | Level 2 | Answer C

Prompt. The university can expand peer tutoring in statistics, which may increase course pass rates. But the plan uses money that could fund a different education need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the tutoring room has new chairs, because concrete details are easier to inspect than resource limits. choice
C. The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct	**D.** The decision should focus only on whether the plan might increase course pass rates, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-042 | Level 2 | Answer D

Prompt. The restaurant group can show calorie labels on printed lunch menus, which may reduce dessert orders. But the plan uses money that could fund a different nutrition need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the lunch menus are printed on thicker paper, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce dessert orders, while leaving costs and resource limits for later. choice	**D.** The tradeoff is between reducing dessert orders and the resource cost named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nutrition, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-043 | Level 2 | Answer B

Prompt. The bank can send overdraft warning texts before fees post, which may reduce overdraft fees. But the plan uses money that could fund a different finance need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the warning texts arrive from a short code, because concrete details are easier to inspect than resource limits. choice	**B.** Reducing overdraft fees matters, but so do the resources used by the plan and not used elsewhere. correct
C. The decision should focus only on whether the plan might reduce overdraft fees, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, finance, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-044 | Level 2 | Answer A

Prompt. The park service can use timed-entry passes for weekend trail visits, which may reduce trail crowding complaints. But the plan uses money that could fund a different environment need. Which statement best names the tradeoff?

A. The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct	**B.** The main tradeoff is the visible side detail: the digital passes include a small trail map, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce trail crowding complaints, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-045 | Level 2 | Answer D

Prompt. The museum can offer free admission on Fridays, which may increase family visits. But the plan uses money that could fund a different culture need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the Friday tickets are scanned at the east door, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might increase family visits, while leaving costs and resource limits for later. choice	**D.** The decision trades a possible gain for local families against what may be delayed elsewhere. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, culture, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-046 | Level 2 | Answer C

Prompt. The sports league can add mandatory sideline concussion checks, which may reduce repeat head injuries. But the plan uses money that could fund a different sports need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce repeat head injuries, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the concussion checklist is printed on yellow paper, because concrete details are easier to inspect than resource limits. choice
C. The upside is reducing repeat head injuries; the limit is that resources still have to be shared. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, sports, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-047 | Level 2 | Answer B

Prompt. The nonprofit can send donation receipts within one day, which may increase donor retention. But the plan uses money that could fund a different nonprofit need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The nonprofit might get a better result, but only by accepting the resource cost described in the prompt. correct
C. The decision should focus only on whether the plan might increase donor retention, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the receipt email subject line changed, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nonprofit, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-048 | Level 2 | Answer D

Prompt. The warehouse can offer monthly lifting-safety and ergonomic training, which may reduce back-injury claims. But the plan uses money that could fund a different workplace safety need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce back-injury claims, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the training room has a ceiling-mounted projector, because concrete details are easier to inspect than resource limits. choice	**D.** The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace safety, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-049 | Level 2 | Answer B

Prompt. The city sanitation office can place compost bins in apartment lobbies, which may reduce landfill waste from participating buildings. But the plan uses money that could fund a different environment need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The result could improve, but that does not erase the cost side of the decision. correct
C. The main tradeoff is the visible side detail: the lobby compost bins have foot pedals, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce landfill waste from participating buildings, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-050 | Level 2 | Answer D

Prompt. The app maker can make new user profiles private by default, which may reduce publicly visible profiles. But the plan uses money that could fund a different technology need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the privacy screen uses a shield icon, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce publicly visible profiles, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** Choosing this plan may help one problem while leaving less support for another useful need. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-051 | Level 2 | Answer A

Prompt. The clinic can reserve same-day appointment slots, which may reduce patient no-show rates. But the plan uses money that could fund a different health need. Which statement best names the tradeoff?

A. The plan may improve something important, but it still has to compete with other needs for limited support. correct	**B.** The decision should focus only on whether the plan might reduce patient no-show rates, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the appointment cards are white, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-052 | Level 2 | Answer B

Prompt. The airline can board passengers by seat zone, which may reduce average boarding time. But the plan uses money that could fund a different travel need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The plan could help with average boarding time, but it would also use limited resources named in the prompt. correct
C. The main tradeoff is the visible side detail: the gate signs are backlit, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce average boarding time, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, travel, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-053 | Level 2 | Answer A

Prompt. The landlord can launch an online apartment repair portal, which may reduce unresolved repair requests. But the plan uses money that could fund a different housing need. Which statement best names the tradeoff?

A. The question is whether reducing unresolved repair requests is worth the resources the plan would use, not just whether the benefit sounds good. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce unresolved repair requests, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the repair portal uses a house logo, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, housing, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-054 | Level 2 | Answer C

Prompt. The cafeteria can move fruit bowls to the front of the cafeteria line, which may increase fruit purchases. But the plan uses money that could fund a different food need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the fruit bowls are ceramic, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might increase fruit purchases, while leaving costs and resource limits for later. choice
C. A fair judgment counts both the possible improvement in fruit purchases and the resources the plan would use. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, food, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-055 | Level 2 | Answer C

Prompt. The call center can give support agents weekly script coaching, which may reduce customer complaint rates. But the plan uses money that could fund a different customer support need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the coaching slides use blue headers, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The plan may help support agents, but another useful need may get less support from the same resources. correct	**D.** The decision should focus only on whether the plan might reduce customer complaint rates, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, customer support, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-056 | Level 2 | Answer D

Prompt. The water utility can send automatic household water-leak alerts, which may reduce average household water use. But the plan uses money that could fund a different utilities need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the water-leak alert screen includes a blue droplet icon, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce average household water use, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** Both sides stay in view: possible improvement in average household water use and limited resources for other needs. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, utilities, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-057 | Level 2 | Answer C

Prompt. The police department can send body-camera activation reminders before patrol shifts, which may reduce missing-camera-footage reports. But the plan uses money that could fund a different governance need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce missing-camera-footage reports, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the reminder tone is two beeps, because concrete details are easier to inspect than resource limits. choice
C. The tradeoff is that the plan may reduce missing-camera-footage reports, but it also has the resource cost named in the prompt. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, governance, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-058 | Level 2 | Answer A

Prompt. The election office can offer online mail-ballot tracking, which may reduce phone calls asking ballot status. But the plan uses money that could fund a different election administration need. Which statement best names the tradeoff?

A. The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the ballot-tracking page uses county colors, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce phone calls asking ballot status, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, election administration, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-059 | Level 2 | Answer C

Prompt. The tutoring app can send spaced-review prompts for language vocabulary, which may increase vocabulary retention quiz scores. But the plan uses money that could fund a different learning need. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the review prompts use a bell icon, because concrete details are easier to inspect than resource limits. choice
C. The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct	**D.** The decision should focus only on whether the plan might increase vocabulary retention quiz scores, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, learning, d2

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-060 | Level 2 | Answer A

Prompt. The gym can offer a beginner gym orientation, which may reduce new-member cancellations. But the plan uses money that could fund a different fitness need. Which statement best names the tradeoff?

A. The possible help is real, but the plan may push another need or group aside while resources are limited. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the orientation mats are black, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce new-member cancellations, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, fitness, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-061 | Level 2 | Answer D

Prompt. The insurer can send weekly safe-driving feedback, which may reduce reported minor crashes. But the plan uses money that could fund a different insurance need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the feedback dashboard uses star ratings, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce reported minor crashes, while leaving costs and resource limits for later. choice	**D.** The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, insurance, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-062 | Level 2 | Answer B

Prompt. The newsroom can place corrections at the top of articles, which may increase reader trust ratings. But the plan uses money that could fund a different media need. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the correction box has a gray border, because concrete details are easier to inspect than resource limits. choice	**B.** The possible gain is increasing reader trust ratings, and the cost is the resource limit described in the prompt. correct
C. The decision should focus only on whether the plan might increase reader trust ratings, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, media, d2

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-063 | Level 2 | Answer B

Prompt. The farmers market can require clearer price signs at vendor stalls, which may reduce price disputes. But the plan uses money that could fund a different local commerce need. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce price disputes, while leaving costs and resource limits for later. choice	**B.** The tradeoff compares the result people want with the resources the plan would take from other work. correct
C. The main tradeoff is the visible side detail: the stall price signs are laminated, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, local commerce, d2

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-064 | Level 2 | Answer A

Prompt. The hotel can send quiet-hours text reminders to hotel guests, which may reduce noise complaints from guest rooms. But the plan uses money that could fund a different hospitality need. Which statement best names the tradeoff?

A. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce noise complaints from guest rooms, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the quiet-hours text reminder uses a small moon icon, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, hospitality, d2

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

tradeoffs-065 | Level 3 | Answer D

Prompt. The city council can extend evening bus service until midnight, which may reduce late-shift commute complaints. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce late-shift commute complaints, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the new buses were repainted blue, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, transportation, d3

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-066 | Level 3 | Answer C

Prompt. The school board can require phone lockers during class, which may reduce classroom disruption reports. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce classroom disruption reports, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the lockers are installed near the gym, because concrete details are easier to inspect than resource limits. choice
C. One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d3

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-067 | Level 3 | Answer B

Prompt. The hospital can send medication reminder texts before evening doses, which may reduce missed-dose reports. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the text messages use a green pill icon, because concrete details are easier to inspect than resource limits. choice	**B.** The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct
C. The decision should focus only on whether the plan might reduce missed-dose reports, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-068 | Level 3 | Answer A

Prompt. The company can test a Monday-through-Thursday workweek, which may reduce staff resignations. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The tradeoff is between reducing staff resignations and the resource cost named in the prompt. correct	**B.** The decision should focus only on whether the plan might reduce staff resignations, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the test calendar starts on a Monday, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-069 | Level 3 | Answer D

Prompt. The grocery chain can add larger unit-price labels on shelf tags, which may reduce shopper overpayment complaints. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce shopper overpayment complaints, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the shelf labels use bold black numbers, because concrete details are easier to inspect than resource limits. choice	**D.** The tradeoff compares the result people want with the resources the plan would take from other work. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, retail, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-070 | Level 3 | Answer C

Prompt. The library can waive late fines for children's books, which may increase library card renewals. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase library card renewals, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the children's-book checkout desk moved six feet, because concrete details are easier to inspect than resource limits. choice
C. The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public services, d3

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-071 | Level 3 | Answer B

Prompt. The platform can require two-factor login for site administrators, which may reduce admin account takeovers. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision trades a possible gain for site administrators against what may be delayed elsewhere. correct
C. The decision should focus only on whether the plan might reduce admin account takeovers, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the login button changed from green to blue, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-072 | Level 3 | Answer A

Prompt. The neighborhood association can add brighter LED streetlights on Maple Street, which may reduce reported thefts. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The upside is reducing reported thefts; the limit is that resources still have to be shared. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the new light poles are made of aluminum, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce reported thefts, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public safety, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-073 | Level 3 | Answer D

Prompt. The university can expand peer tutoring in statistics, which may increase course pass rates. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the tutoring room has new chairs, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might increase course pass rates, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The university might get a better result, but only by accepting the resource cost described in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-074 | Level 3 | Answer C

Prompt. The restaurant group can show calorie labels on printed lunch menus, which may reduce dessert orders. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lunch menus are printed on thicker paper, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. Reducing dessert orders matters, but so do the resources used by the plan and not used elsewhere. correct	**D.** The decision should focus only on whether the plan might reduce dessert orders, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nutrition, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-075 | Level 3 | Answer A

Prompt. The bank can send overdraft warning texts before fees post, which may reduce overdraft fees. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The result could improve, but that does not erase the cost side of the decision. correct	**B.** The decision should focus only on whether the plan might reduce overdraft fees, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the warning texts arrive from a short code, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, finance, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-076 | Level 3 | Answer B

Prompt. The park service can use timed-entry passes for weekend trail visits, which may reduce trail crowding complaints. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** Choosing this plan may help one problem while leaving less support for another useful need. correct
C. The main tradeoff is the visible side detail: the digital passes include a small trail map, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce trail crowding complaints, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-077 | Level 3 | Answer C

Prompt. The museum can offer free admission on Fridays, which may increase family visits. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the Friday tickets are scanned at the east door, because concrete details are easier to inspect than resource limits. choice
C. The plan may improve something important, but it still has to compete with other needs for limited support. correct	**D.** The decision should focus only on whether the plan might increase family visits, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, culture, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-078 | Level 3 | Answer D

Prompt. The sports league can add mandatory sideline concussion checks, which may reduce repeat head injuries. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the concussion checklist is printed on yellow paper, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce repeat head injuries, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The plan could help with repeat head injuries, but it would also use limited resources named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, sports, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-079 | Level 3 | Answer A

Prompt. The nonprofit can send donation receipts within one day, which may increase donor retention. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might increase donor retention, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the receipt email subject line changed, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nonprofit, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-080 | Level 3 | Answer B

Prompt. The warehouse can offer monthly lifting-safety and ergonomic training, which may reduce back-injury claims. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** A fair judgment counts both the possible improvement in back-injury claims and the resources the plan would use. correct
C. The decision should focus only on whether the plan might reduce back-injury claims, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the training room has a ceiling-mounted projector, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace safety, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-081 | Level 3 | Answer C

Prompt. The city sanitation office can place compost bins in apartment lobbies, which may reduce landfill waste from participating buildings. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lobby compost bins have foot pedals, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce landfill waste from participating buildings, while leaving costs and resource limits for later. choice
C. The plan may help apartment residents, but another useful need may get less support from the same resources. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-082 | Level 3 | Answer D

Prompt. The app maker can make new user profiles private by default, which may reduce publicly visible profiles. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the privacy screen uses a shield icon, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce publicly visible profiles, while leaving costs and resource limits for later. choice	**D.** Both sides stay in view: possible improvement in publicly visible profiles and limited resources for other needs. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-083 | Level 3 | Answer A

Prompt. The clinic can reserve same-day appointment slots, which may reduce patient no-show rates. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The tradeoff is that the plan may reduce patient no-show rates, but it also has the resource cost named in the prompt. correct	**B.** The decision should focus only on whether the plan might reduce patient no-show rates, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the appointment cards are white, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-084 | Level 3 | Answer B

Prompt. The airline can board passengers by seat zone, which may reduce average boarding time. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The question is whether reducing average boarding time is worth the resources the plan would use, not just whether the benefit sounds good. correct
C. The decision should focus only on whether the plan might reduce average boarding time, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the gate signs are backlit, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, travel, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-085 | Level 3 | Answer B

Prompt. The landlord can launch an online apartment repair portal, which may reduce unresolved repair requests. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the repair portal uses a house logo, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce unresolved repair requests, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, housing, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-086 | Level 3 | Answer A

Prompt. The cafeteria can move fruit bowls to the front of the cafeteria line, which may increase fruit purchases. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The possible help is real, but the plan may push another need or group aside while resources are limited. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the fruit bowls are ceramic, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might increase fruit purchases, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, food, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-087 | Level 3 | Answer D

Prompt. The call center can give support agents weekly script coaching, which may reduce customer complaint rates. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the coaching slides use blue headers, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce customer complaint rates, while leaving costs and resource limits for later. choice	**D.** The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, customer support, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-088 | Level 3 | Answer C

Prompt. The water utility can send automatic household water-leak alerts, which may reduce average household water use. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the water-leak alert screen includes a blue droplet icon, because concrete details are easier to inspect than resource limits. choice
C. The possible gain is reducing average household water use, and the cost is the resource limit described in the prompt. correct	**D.** The decision should focus only on whether the plan might reduce average household water use, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, utilities, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-089 | Level 3 | Answer B

Prompt. The police department can send body-camera activation reminders before patrol shifts, which may reduce missing-camera-footage reports. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce missing-camera-footage reports, while leaving costs and resource limits for later. choice	**B.** The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the reminder tone is two beeps, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, governance, d3

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-090 | Level 3 | Answer A

Prompt. The election office can offer online mail-ballot tracking, which may reduce phone calls asking ballot status. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**B.** The decision should focus only on whether the plan might reduce phone calls asking ballot status, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the ballot-tracking page uses county colors, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, election administration, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-091 | Level 3 | Answer C

Prompt. The tutoring app can send spaced-review prompts for language vocabulary, which may increase vocabulary retention quiz scores. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the review prompts use a bell icon, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct	**D.** The decision should focus only on whether the plan might increase vocabulary retention quiz scores, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, learning, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-092 | Level 3 | Answer A

Prompt. The gym can offer a beginner gym orientation, which may reduce new-member cancellations. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct	**B.** The main tradeoff is the visible side detail: the orientation mats are black, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce new-member cancellations, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, fitness, d3

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-093 | Level 3 | Answer D

Prompt. The insurer can send weekly safe-driving feedback, which may reduce reported minor crashes. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce reported minor crashes, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the feedback dashboard uses star ratings, because concrete details are easier to inspect than resource limits. choice	**D.** The tradeoff is between reducing reported minor crashes and the resource cost named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, insurance, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-094 | Level 3 | Answer C

Prompt. The newsroom can place corrections at the top of articles, which may increase reader trust ratings. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the correction box has a gray border, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The tradeoff compares the result people want with the resources the plan would take from other work. correct	**D.** The decision should focus only on whether the plan might increase reader trust ratings, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, media, d3

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-095 | Level 3 | Answer B

Prompt. The farmers market can require clearer price signs at vendor stalls, which may reduce price disputes. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce price disputes, while leaving costs and resource limits for later. choice	**B.** The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the stall price signs are laminated, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, local commerce, d3

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-096 | Level 3 | Answer D

Prompt. The hotel can send quiet-hours text reminders to hotel guests, which may reduce noise complaints from guest rooms. But the plan may move resources away from a smaller group that was not included in the test. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the quiet-hours text reminder uses a small moon icon, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce noise complaints from guest rooms, while leaving costs and resource limits for later. choice	**D.** The decision trades a possible gain for overnight hotel guests against what may be delayed elsewhere. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, hospitality, d3

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

tradeoffs-097 | Level 4 | Answer C

Prompt. The city council can extend evening bus service until midnight, which may reduce late-shift commute complaints. But the plan could create extra work for people who already handle other transportation tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the new buses were repainted blue, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision trades a possible gain for late-shift workers against what may be delayed elsewhere. correct	**D.** The decision should focus only on whether the plan might reduce late-shift commute complaints, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, transportation, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-098 | Level 4 | Answer D

Prompt. The school board can require phone lockers during class, which may reduce classroom disruption reports. But the plan could create extra work for people who already handle other education tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lockers are installed near the gym, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce classroom disruption reports, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The upside is reducing classroom disruption reports; the limit is that resources still have to be shared. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-099 | Level 4 | Answer A

Prompt. The hospital can send medication reminder texts before evening doses, which may reduce missed-dose reports. But the plan could create extra work for people who already handle other health tasks. Which statement best names the tradeoff?

A. The hospital might get a better result, but only by accepting the resource cost described in the prompt. correct	**B.** The decision should focus only on whether the plan might reduce missed-dose reports, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the text messages use a green pill icon, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-100 | Level 4 | Answer B

Prompt. The company can test a Monday-through-Thursday workweek, which may reduce staff resignations. But the plan could create extra work for people who already handle other workplace tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** Reducing staff resignations matters, but so do the resources used by the plan and not used elsewhere. correct
C. The decision should focus only on whether the plan might reduce staff resignations, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the test calendar starts on a Monday, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-101 | Level 4 | Answer C

Prompt. The grocery chain can add larger unit-price labels on shelf tags, which may reduce shopper overpayment complaints. But the plan could create extra work for people who already handle other retail tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce shopper overpayment complaints, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct	**D.** The main tradeoff is the visible side detail: the shelf labels use bold black numbers, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-102 | Level 4 | Answer D

Prompt. The library can waive late fines for children's books, which may increase library card renewals. But the plan could create extra work for people who already handle other public services tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase library card renewals, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the children's-book checkout desk moved six feet, because concrete details are easier to inspect than resource limits. choice	**D.** Choosing this plan may help one problem while leaving less support for another useful need. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public services, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-103 | Level 4 | Answer A

Prompt. The platform can require two-factor login for site administrators, which may reduce admin account takeovers. But the plan could create extra work for people who already handle other technology tasks. Which statement best names the tradeoff?

A. The plan may improve something important, but it still has to compete with other needs for limited support. correct	**B.** The decision should focus only on whether the plan might reduce admin account takeovers, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the login button changed from green to blue, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-104 | Level 4 | Answer B

Prompt. The neighborhood association can add brighter LED streetlights on Maple Street, which may reduce reported thefts. But the plan could create extra work for people who already handle other public safety tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the new light poles are made of aluminum, because concrete details are easier to inspect than resource limits. choice	**B.** The plan could help with reported thefts, but it would also use limited resources named in the prompt. correct
C. The decision should focus only on whether the plan might reduce reported thefts, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public safety, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-105 | Level 4 | Answer C

Prompt. The university can expand peer tutoring in statistics, which may increase course pass rates. But the plan could create extra work for people who already handle other education tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the tutoring room has new chairs, because concrete details are easier to inspect than resource limits. choice
C. The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct	**D.** The decision should focus only on whether the plan might increase course pass rates, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-106 | Level 4 | Answer D

Prompt. The restaurant group can show calorie labels on printed lunch menus, which may reduce dessert orders. But the plan could create extra work for people who already handle other nutrition tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce dessert orders, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the lunch menus are printed on thicker paper, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The result could improve, but that does not erase the cost side of the decision. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nutrition, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-107 | Level 4 | Answer B

Prompt. The bank can send overdraft warning texts before fees post, which may reduce overdraft fees. But the plan could create extra work for people who already handle other finance tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce overdraft fees, while leaving costs and resource limits for later. choice	**B.** The plan may help checking-account customers, but another useful need may get less support from the same resources. correct
C. The main tradeoff is the visible side detail: the warning texts arrive from a short code, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, finance, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-108 | Level 4 | Answer A

Prompt. The park service can use timed-entry passes for weekend trail visits, which may reduce trail crowding complaints. But the plan could create extra work for people who already handle other environment tasks. Which statement best names the tradeoff?

A. Both sides stay in view: possible improvement in trail crowding complaints and limited resources for other needs. correct	**B.** The decision should focus only on whether the plan might reduce trail crowding complaints, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the digital passes include a small trail map, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-109 | Level 4 | Answer D

Prompt. The museum can offer free admission on Fridays, which may increase family visits. But the plan could create extra work for people who already handle other culture tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the Friday tickets are scanned at the east door, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might increase family visits, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The tradeoff is that the plan may increase family visits, but it also has the resource cost named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, culture, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-110 | Level 4 | Answer C

Prompt. The sports league can add mandatory sideline concussion checks, which may reduce repeat head injuries. But the plan could create extra work for people who already handle other sports tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the concussion checklist is printed on yellow paper, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The question is whether reducing repeat head injuries is worth the resources the plan would use, not just whether the benefit sounds good. correct	**D.** The decision should focus only on whether the plan might reduce repeat head injuries, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, sports, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-111 | Level 4 | Answer B

Prompt. The nonprofit can send donation receipts within one day, which may increase donor retention. But the plan could create extra work for people who already handle other nonprofit tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase donor retention, while leaving costs and resource limits for later. choice	**B.** A fair judgment counts both the possible improvement in donor retention and the resources the plan would use. correct
C. The main tradeoff is the visible side detail: the receipt email subject line changed, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nonprofit, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-112 | Level 4 | Answer A

Prompt. The warehouse can offer monthly lifting-safety and ergonomic training, which may reduce back-injury claims. But the plan could create extra work for people who already handle other workplace safety tasks. Which statement best names the tradeoff?

A. The possible help is real, but the plan may push another need or group aside while resources are limited. correct	**B.** The main tradeoff is the visible side detail: the training room has a ceiling-mounted projector, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce back-injury claims, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace safety, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-113 | Level 4 | Answer D

Prompt. The city sanitation office can place compost bins in apartment lobbies, which may reduce landfill waste from participating buildings. But the plan could create extra work for people who already handle other environment tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce landfill waste from participating buildings, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the lobby compost bins have foot pedals, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-114 | Level 4 | Answer C

Prompt. The app maker can make new user profiles private by default, which may reduce publicly visible profiles. But the plan could create extra work for people who already handle other technology tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce publicly visible profiles, while leaving costs and resource limits for later. choice
C. The possible gain is reducing publicly visible profiles, and the cost is the resource limit described in the prompt. correct	**D.** The main tradeoff is the visible side detail: the privacy screen uses a shield icon, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-115 | Level 4 | Answer B

Prompt. The clinic can reserve same-day appointment slots, which may reduce patient no-show rates. But the plan could create extra work for people who already handle other health tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce patient no-show rates, while leaving costs and resource limits for later. choice	**B.** The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct
C. The main tradeoff is the visible side detail: the appointment cards are white, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-116 | Level 4 | Answer A

Prompt. The airline can board passengers by seat zone, which may reduce average boarding time. But the plan could create extra work for people who already handle other travel tasks. Which statement best names the tradeoff?

A. The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct	**B.** The main tradeoff is the visible side detail: the gate signs are backlit, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce average boarding time, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, travel, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-117 | Level 4 | Answer C

Prompt. The landlord can launch an online apartment repair portal, which may reduce unresolved repair requests. But the plan could create extra work for people who already handle other housing tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce unresolved repair requests, while leaving costs and resource limits for later. choice
C. One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct	**D.** The main tradeoff is the visible side detail: the repair portal uses a house logo, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, housing, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-118 | Level 4 | Answer D

Prompt. The cafeteria can move fruit bowls to the front of the cafeteria line, which may increase fruit purchases. But the plan could create extra work for people who already handle other food tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the fruit bowls are ceramic, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might increase fruit purchases, while leaving costs and resource limits for later. choice	**D.** The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, food, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-119 | Level 4 | Answer A

Prompt. The call center can give support agents weekly script coaching, which may reduce customer complaint rates. But the plan could create extra work for people who already handle other customer support tasks. Which statement best names the tradeoff?

A. The tradeoff is between reducing customer complaint rates and the resource cost named in the prompt. correct	**B.** The decision should focus only on whether the plan might reduce customer complaint rates, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the coaching slides use blue headers, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, customer support, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-120 | Level 4 | Answer B

Prompt. The water utility can send automatic household water-leak alerts, which may reduce average household water use. But the plan could create extra work for people who already handle other utilities tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce average household water use, while leaving costs and resource limits for later. choice	**B.** The tradeoff compares the result people want with the resources the plan would take from other work. correct
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the water-leak alert screen includes a blue droplet icon, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, utilities, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-121 | Level 4 | Answer C

Prompt. The police department can send body-camera activation reminders before patrol shifts, which may reduce missing-camera-footage reports. But the plan could create extra work for people who already handle other governance tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce missing-camera-footage reports, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**D.** The main tradeoff is the visible side detail: the reminder tone is two beeps, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, governance, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-122 | Level 4 | Answer D

Prompt. The election office can offer online mail-ballot tracking, which may reduce phone calls asking ballot status. But the plan could create extra work for people who already handle other election administration tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the ballot-tracking page uses county colors, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce phone calls asking ballot status, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The decision trades a possible gain for mail voters against what may be delayed elsewhere. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, election administration, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-123 | Level 4 | Answer A

Prompt. The tutoring app can send spaced-review prompts for language vocabulary, which may increase vocabulary retention quiz scores. But the plan could create extra work for people who already handle other learning tasks. Which statement best names the tradeoff?

A. The upside is increasing vocabulary retention quiz scores; the limit is that resources still have to be shared. correct	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might increase vocabulary retention quiz scores, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the review prompts use a bell icon, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, learning, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-124 | Level 4 | Answer B

Prompt. The gym can offer a beginner gym orientation, which may reduce new-member cancellations. But the plan could create extra work for people who already handle other fitness tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The gym might get a better result, but only by accepting the resource cost described in the prompt. correct
C. The decision should focus only on whether the plan might reduce new-member cancellations, while leaving costs and resource limits for later. choice	**D.** The main tradeoff is the visible side detail: the orientation mats are black, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, fitness, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-125 | Level 4 | Answer A

Prompt. The insurer can send weekly safe-driving feedback, which may reduce reported minor crashes. But the plan could create extra work for people who already handle other insurance tasks. Which statement best names the tradeoff?

A. Reducing reported minor crashes matters, but so do the resources used by the plan and not used elsewhere. correct	**B.** The main tradeoff is the visible side detail: the feedback dashboard uses star ratings, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce reported minor crashes, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, insurance, d4

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-126 | Level 4 | Answer B

Prompt. The newsroom can place corrections at the top of articles, which may increase reader trust ratings. But the plan could create extra work for people who already handle other media tasks. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase reader trust ratings, while leaving costs and resource limits for later. choice	**B.** The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct
C. The main tradeoff is the visible side detail: the correction box has a gray border, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, media, d4

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-127 | Level 4 | Answer D

Prompt. The farmers market can require clearer price signs at vendor stalls, which may reduce price disputes. But the plan could create extra work for people who already handle other local commerce tasks. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce price disputes, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the stall price signs are laminated, because concrete details are easier to inspect than resource limits. choice	**D.** Choosing this plan may help one problem while leaving less support for another useful need. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, local commerce, d4

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-128 | Level 4 | Answer C

Prompt. The hotel can send quiet-hours text reminders to hotel guests, which may reduce noise complaints from guest rooms. But the plan could create extra work for people who already handle other hospitality tasks. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the quiet-hours text reminder uses a small moon icon, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce noise complaints from guest rooms, while leaving costs and resource limits for later. choice
C. The plan may improve something important, but it still has to compete with other needs for limited support. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, hospitality, d4

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

tradeoffs-129 | Level 5 | Answer B

Prompt. The city council can extend evening bus service until midnight, which may reduce late-shift commute complaints. But the plan may help late-shift workers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the new buses were repainted blue, because concrete details are easier to inspect than resource limits. choice	**B.** The plan may improve something important, but it still has to compete with other needs for limited support. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce late-shift commute complaints, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, transportation, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-130 | Level 5 | Answer D

Prompt. The school board can require phone lockers during class, which may reduce classroom disruption reports. But the plan may help ninth-grade students while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the lockers are installed near the gym, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce classroom disruption reports, while leaving costs and resource limits for later. choice	**D.** The plan could help with classroom disruption reports, but it would also use limited resources named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-131 | Level 5 | Answer D

Prompt. The hospital can send medication reminder texts before evening doses, which may reduce missed-dose reports. But the plan may help patients over 60 while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce missed-dose reports, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the text messages use a green pill icon, because concrete details are easier to inspect than resource limits. choice	**D.** The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-132 | Level 5 | Answer C

Prompt. The company can test a Monday-through-Thursday workweek, which may reduce staff resignations. But the plan may help software engineers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce staff resignations, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The result could improve, but that does not erase the cost side of the decision. correct	**D.** The main tradeoff is the visible side detail: the test calendar starts on a Monday, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-133 | Level 5 | Answer B

Prompt. The grocery chain can add larger unit-price labels on shelf tags, which may reduce shopper overpayment complaints. But the plan may help weekly grocery shoppers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce shopper overpayment complaints, while leaving costs and resource limits for later. choice	**B.** Choosing this plan may help one problem while leaving less support for another useful need. correct
C. The main tradeoff is the visible side detail: the shelf labels use bold black numbers, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, retail, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-134 | Level 5 | Answer A

Prompt. The library can waive late fines for children's books, which may increase library card renewals. But the plan may help families checking out children's books while making another group's problem wait longer. Which statement best names the tradeoff?

A. Both sides stay in view: possible improvement in library card renewals and limited resources for other needs. correct	**B.** The main tradeoff is the visible side detail: the children's-book checkout desk moved six feet, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might increase library card renewals, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public services, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-135 | Level 5 | Answer D

Prompt. The platform can require two-factor login for site administrators, which may reduce admin account takeovers. But the plan may help site administrators while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the login button changed from green to blue, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The decision should focus only on whether the plan might reduce admin account takeovers, while leaving costs and resource limits for later. choice	**D.** The tradeoff is that the plan may reduce admin account takeovers, but it also has the resource cost named in the prompt. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-136 | Level 5 | Answer C

Prompt. The neighborhood association can add brighter LED streetlights on Maple Street, which may reduce reported thefts. But the plan may help residents on Maple Street while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce reported thefts, while leaving costs and resource limits for later. choice
C. The question is whether reducing reported thefts is worth the resources the plan would use, not just whether the benefit sounds good. correct	**D.** The main tradeoff is the visible side detail: the new light poles are made of aluminum, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, public safety, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-137 | Level 5 | Answer D

Prompt. The university can expand peer tutoring in statistics, which may increase course pass rates. But the plan may help first-year statistics students while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase course pass rates, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the tutoring room has new chairs, because concrete details are easier to inspect than resource limits. choice	**D.** A fair judgment counts both the possible improvement in course pass rates and the resources the plan would use. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, education, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-138 | Level 5 | Answer B

Prompt. The restaurant group can show calorie labels on printed lunch menus, which may reduce dessert orders. But the plan may help lunch customers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lunch menus are printed on thicker paper, because concrete details are easier to inspect than resource limits. choice	**B.** The plan may help lunch customers, but another useful need may get less support from the same resources. correct
C. The benefit alone should settle the decision. choice	**D.** The decision should focus only on whether the plan might reduce dessert orders, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nutrition, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-139 | Level 5 | Answer A

Prompt. The bank can send overdraft warning texts before fees post, which may reduce overdraft fees. But the plan may help checking-account customers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The possible improvement is weighed against the resource limit described in the prompt, not only the upside. correct	**B.** The main tradeoff is the visible side detail: the warning texts arrive from a short code, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce overdraft fees, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, finance, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-140 | Level 5 | Answer B

Prompt. The park service can use timed-entry passes for weekend trail visits, which may reduce trail crowding complaints. But the plan may help weekend trail hikers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce trail crowding complaints, while leaving costs and resource limits for later. choice	**B.** The possible gain is reducing trail crowding complaints, and the cost is the resource limit described in the prompt. correct
C. The main tradeoff is the visible side detail: the digital passes include a small trail map, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-141 | Level 5 | Answer C

Prompt. The museum can offer free admission on Fridays, which may increase family visits. But the plan may help local families while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might increase family visits, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The hoped-for result has to be weighed against the resources the prompt says the plan would use, instead of ignoring limits. correct	**D.** The main tradeoff is the visible side detail: the Friday tickets are scanned at the east door, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, culture, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-142 | Level 5 | Answer D

Prompt. The sports league can add mandatory sideline concussion checks, which may reduce repeat head injuries. But the plan may help youth soccer players while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the concussion checklist is printed on yellow paper, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce repeat head injuries, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The benefit matters, but the resource cost named in the prompt also has to be counted in the same decision. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-143 | Level 5 | Answer A

Prompt. The nonprofit can send donation receipts within one day, which may increase donor retention. But the plan may help first-time donors while making another group's problem wait longer. Which statement best names the tradeoff?

A. The possible help is real, but the plan may push another need or group aside while resources are limited. correct	**B.** The main tradeoff is the visible side detail: the receipt email subject line changed, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might increase donor retention, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, nonprofit, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-144 | Level 5 | Answer B

Prompt. The warehouse can offer monthly lifting-safety and ergonomic training, which may reduce back-injury claims. But the plan may help warehouse staff while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the training room has a ceiling-mounted projector, because concrete details are easier to inspect than resource limits. choice	**B.** The hoped-for gain and the resource limit are both part of the same choice, not separate questions. correct
C. The decision should focus only on whether the plan might reduce back-injury claims, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, workplace safety, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-145 | Level 5 | Answer C

Prompt. The city sanitation office can place compost bins in apartment lobbies, which may reduce landfill waste from participating buildings. But the plan may help apartment residents while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the lobby compost bins have foot pedals, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. The tradeoff is between reducing landfill waste from participating buildings and the resource cost named in the prompt. correct	**D.** The decision should focus only on whether the plan might reduce landfill waste from participating buildings, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, environment, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-146 | Level 5 | Answer D

Prompt. The app maker can make new user profiles private by default, which may reduce publicly visible profiles. But the plan may help new app users while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce publicly visible profiles, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the privacy screen uses a shield icon, because concrete details are easier to inspect than resource limits. choice	**D.** The tradeoff compares the result people want with the resources the plan would take from other work. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, technology, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-147 | Level 5 | Answer C

Prompt. The clinic can reserve same-day appointment slots, which may reduce patient no-show rates. But the plan may help primary-care patients while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce patient no-show rates, while leaving costs and resource limits for later. choice	**B.** The benefit alone should settle the decision. choice
C. The upside and downside stay together: possible improvement, plus the resources used or delayed by the plan. correct	**D.** The main tradeoff is the visible side detail: the appointment cards are white, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, health, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-148 | Level 5 | Answer D

Prompt. The airline can board passengers by seat zone, which may reduce average boarding time. But the plan may help domestic flight passengers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The main tradeoff is the visible side detail: the gate signs are backlit, because concrete details are easier to inspect than resource limits. choice
C. The decision should focus only on whether the plan might reduce average boarding time, while leaving costs and resource limits for later. choice	**D.** One goal may improve while another worthwhile goal gets fewer resources from the same pool of limited support. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, travel, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-149 | Level 5 | Answer C

Prompt. The landlord can launch an online apartment repair portal, which may reduce unresolved repair requests. But the plan may help apartment tenants while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The decision should focus only on whether the plan might reduce unresolved repair requests, while leaving costs and resource limits for later. choice
C. The upside is reducing unresolved repair requests; the limit is that resources still have to be shared. correct	**D.** The main tradeoff is the visible side detail: the repair portal uses a house logo, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, housing, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-150 | Level 5 | Answer A

Prompt. The cafeteria can move fruit bowls to the front of the cafeteria line, which may increase fruit purchases. But the plan may help middle-school students while making another group's problem wait longer. Which statement best names the tradeoff?

A. The cafeteria might get a better result, but only by accepting the resource cost described in the prompt. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the fruit bowls are ceramic, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might increase fruit purchases, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, food, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-151 | Level 5 | Answer B

Prompt. The call center can give support agents weekly script coaching, which may reduce customer complaint rates. But the plan may help support agents while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the coaching slides use blue headers, because concrete details are easier to inspect than resource limits. choice	**B.** Reducing customer complaint rates matters, but so do the resources used by the plan and not used elsewhere. correct
C. The decision should focus only on whether the plan might reduce customer complaint rates, while leaving costs and resource limits for later. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, customer support, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-152 | Level 5 | Answer A

Prompt. The water utility can send automatic household water-leak alerts, which may reduce average household water use. But the plan may help local homeowners while making another group's problem wait longer. Which statement best names the tradeoff?

A. The plan is judged by what it may gain and by what it would use, delay, or pull from elsewhere. correct	**B.** The decision should focus only on whether the plan might reduce average household water use, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the water-leak alert screen includes a blue droplet icon, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, utilities, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-153 | Level 5 | Answer D

Prompt. The police department can send body-camera activation reminders before patrol shifts, which may reduce missing-camera-footage reports. But the plan may help patrol officers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The decision should focus only on whether the plan might reduce missing-camera-footage reports, while leaving costs and resource limits for later. choice	**B.** The main tradeoff is the visible side detail: the reminder tone is two beeps, because concrete details are easier to inspect than resource limits. choice
C. The benefit alone should settle the decision. choice	**D.** The decision trades a possible gain for patrol officers against what may be delayed elsewhere. correct

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is D because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, governance, d5

A feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

B feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

tradeoffs-154 | Level 5 | Answer C

Prompt. The election office can offer online mail-ballot tracking, which may reduce phone calls asking ballot status. But the plan may help mail voters while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the ballot-tracking page uses county colors, because concrete details are easier to inspect than resource limits. choice	**B.** The decision should focus only on whether the plan might reduce phone calls asking ballot status, while leaving costs and resource limits for later. choice
C. The plan may improve something important, but it still has to compete with other needs for limited support. correct	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, election administration, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-155 | Level 5 | Answer B

Prompt. The tutoring app can send spaced-review prompts for language vocabulary, which may increase vocabulary retention quiz scores. But the plan may help language learners while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The plan could help with vocabulary retention quiz scores, but it would also use limited resources named in the prompt. correct
C. The main tradeoff is the visible side detail: the review prompts use a bell icon, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might increase vocabulary retention quiz scores, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, learning, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-156 | Level 5 | Answer A

Prompt. The gym can offer a beginner gym orientation, which may reduce new-member cancellations. But the plan may help new gym members while making another group's problem wait longer. Which statement best names the tradeoff?

A. The plan's possible payoff is connected to its resource cost, not judged by the payoff alone. correct	**B.** The benefit alone should settle the decision. choice
C. The main tradeoff is the visible side detail: the orientation mats are black, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce new-member cancellations, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, fitness, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-157 | Level 5 | Answer A

Prompt. The insurer can send weekly safe-driving feedback, which may reduce reported minor crashes. But the plan may help auto-insurance policyholders while making another group's problem wait longer. Which statement best names the tradeoff?

A. The result could improve, but that does not erase the cost side of the decision. correct	**B.** The decision should focus only on whether the plan might reduce reported minor crashes, while leaving costs and resource limits for later. choice
C. The benefit alone should settle the decision. choice	**D.** The main tradeoff is the visible side detail: the feedback dashboard uses star ratings, because concrete details are easier to inspect than resource limits. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, insurance, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

D feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

tradeoffs-158 | Level 5 | Answer C

Prompt. The newsroom can place corrections at the top of articles, which may increase reader trust ratings. But the plan may help newsletter readers while making another group's problem wait longer. Which statement best names the tradeoff?

A. The main tradeoff is the visible side detail: the correction box has a gray border, because concrete details are easier to inspect than resource limits. choice	**B.** The benefit alone should settle the decision. choice
C. Choosing this plan may help one problem while leaving less support for another useful need. correct	**D.** The decision should focus only on whether the plan might increase reader trust ratings, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is C because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, media, d5

A feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

B feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

C feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

tradeoffs-159 | Level 5 | Answer A

Prompt. The farmers market can require clearer price signs at vendor stalls, which may reduce price disputes. But the plan may help weekend farmers market shoppers while making another group's problem wait longer. Which statement best names the tradeoff?

A. Both sides stay in view: possible improvement in price disputes and limited resources for other needs. correct	**B.** The decision should focus only on whether the plan might reduce price disputes, while leaving costs and resource limits for later. choice
C. The main tradeoff is the visible side detail: the stall price signs are laminated, because concrete details are easier to inspect than resource limits. choice	**D.** The benefit alone should settle the decision. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is A because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, local commerce, d5

A feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

B feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

tradeoffs-160 | Level 5 | Answer B

Prompt. The hotel can send quiet-hours text reminders to hotel guests, which may reduce noise complaints from guest rooms. But the plan may help overnight hotel guests while making another group's problem wait longer. Which statement best names the tradeoff?

A. The benefit alone should settle the decision. choice	**B.** The tradeoff is that the plan may reduce noise complaints from guest rooms, but it also has the resource cost named in the prompt. correct
C. The main tradeoff is the visible side detail: the quiet-hours text reminder uses a small moon icon, because concrete details are easier to inspect than resource limits. choice	**D.** The decision should focus only on whether the plan might reduce noise complaints from guest rooms, while leaving costs and resource limits for later. choice

Core explanation. A tradeoff compares what you gain with what you give up or risk.

Process commentary. To uncover the answer, hold the possible gain and the possible cost in the same sentence. The correct choice is B because it shows what is gained and what is given up, delayed, or risked.

Tags: tradeoffs, tradeoff, hospitality, d5

A feedback (Distractor): Not quite. A real benefit is only one side of a tradeoff. The cost, delay, or resource limit still has to be weighed.

B feedback (Correct): Correct. This answer keeps both sides of the decision in view: what the plan might improve and what it would cost, delay, or risk.

C feedback (Distractor): Not quite. A random visible detail is not the tradeoff. The tradeoff is between the plan's possible benefit and its cost or risk.

D feedback (Distractor): Not quite. A tradeoff looks at both the possible benefit and what the plan uses, costs, or delays.

Skill 16

Update Beliefs Responsibly

How Should Belief Change?

Change confidence by the right amount. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How much should new evidence change confidence?
Why it matters	Strong thinkers change confidence by the right amount. They neither ignore new evidence nor swing wildly from one result to certainty.
Conceptual core	Belief updating teaches proportion. Students should neither ignore evidence that points in a direction nor treat one small result as final proof. The skill joins direction and size: does the evidence support or weaken the claim, and is it strong enough to move confidence a little or a lot? This habit is central to intellectual humility.
Student method	Ask whether the evidence points toward or away from the claim, how strong the evidence is, and what uncertainty remains. Then move confidence a little or a lot accordingly.
Analogy	Belief updating is steering, not teleporting. New evidence should turn the wheel in proportion to its strength.
Assessment focus	A good answer names both the direction and size of the confidence change while preserving remaining uncertainty.

Teaching Sequence

1. State the prior uncertainty or starting belief.

2. Decide whether the evidence points toward or away from the claim.

3. Judge the evidence strength using sample, comparison, directness, and reliability.

4. Move confidence by an amount that fits the evidence.

Common Confusions To Watch For

1. Students may think changing confidence means fully changing sides.

2. Students may ignore weak evidence because it is not conclusive.

3. Students may overreact to one vivid case or small test.

Teacher Prompts

1. Which direction does the evidence point?

2. How strong is it?

3. What uncertainty remains after we update?

Worked Example

Scenario	You are unsure whether brighter lights reduce theft reports. A small matched test finds reports fell from 50 to 44 over the same period nearby streets stayed about the same.
Teacher think-aloud	The evidence points toward the lights helping, and the comparison makes it more useful. But it is still one small test, so confidence should increase somewhat, not jump to certainty.
Student takeaway	Responsible updating changes belief in proportion to evidence strength.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. You begin unsure whether brighter streetlights reduce theft reports. Study A is one resident saying a street feels safer. Study B assigns 40 similar streets at random to brighter or unchanged lighting, keeps patrol policy the same, and records the same theft measure before and after: reports fall more in the brighter-light group. No exact effect size or uncertainty estimate is supplied.

What To Do

1. For each study, say whether it should raise, lower, or leave your confidence roughly unchanged, and explain why.

2. Choose which should change confidence more, using the difference between personal impressions and a controlled comparison.

3. Name one missing detail you would seek before making a strong conclusion. Do not invent a precise percentage change in confidence.

Check before reading the answer. Have you updated more for the stronger relevant evidence while keeping uncertainty about the size and reliability of the effect?

Model Answer

Study A should change confidence about theft reports very little: feeling safer is a different outcome and one person's impression. Study B should raise confidence more because random assignment and consistent measurement provide a fairer comparison of the claimed outcome. I would request the size of the difference and its uncertainty before making a strong claim.

Why it is adequate. It ties the direction and strength of the update to evidence quality and acknowledges that the scenario cannot justify an exact confidence number.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

belief_update-001 | Level 1 | Answer B

Prompt. You are unsure whether extending evening bus service until midnight would reduce late-shift commute complaints. Then you learn about one small four-week test where late-shift commute complaints fell by 22% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Raise confidence somewhat, while staying open to better evidence. correct
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, transportation, d1

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-002 | Level 1 | Answer C

Prompt. You are unsure whether requiring phone lockers during class would reduce classroom disruption reports. Then you see a random comparison using two similar groups. In the group that used the plan, classroom disruption reports fell by 31% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Raise confidence a lot, while still avoiding total certainty. correct	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, education, d1

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-003 | Level 1 | Answer D

Prompt. You are unsure whether sending medication reminder texts before evening doses would reduce missed-dose reports. Then you learn about one small four-week test where missed-dose reports rose by 18% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Lower confidence somewhat, while staying open to better evidence. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, health, d1

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-004 | Level 1 | Answer A

Prompt. You are unsure whether testing a Monday-through-Thursday workweek would reduce staff resignations. Then you learn that the test calendar starts on a Monday. How should your confidence in that claim change?

A. Keep confidence about the same, because that detail does not test whether the plan works. correct	**B.** Treat the side detail as strong evidence. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, workplace, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-005 | Level 1 | Answer B

Prompt. You are unsure whether adding larger unit-price labels on shelf tags would reduce shopper overpayment complaints. Then you learn about one small four-week test where shopper overpayment complaints fell by 27% compared with the four weeks before the test. You also learn that a local consumer group ran a price-literacy campaign. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Nudge confidence upward only a little, because the result helps but another change could explain it. correct
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, retail, d1

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-006 | Level 1 | Answer C

Prompt. You are unsure whether waiving late fines for children's books would increase library card renewals. Then you learn about one small four-week test where library card renewals rose by 19% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Shift your confidence upward a bit, because the test helps but does not settle the question. correct	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, public services, d1

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-007 | Level 1 | Answer D

Prompt. You are unsure whether requiring two-factor login for site administrators would reduce admin account takeovers. Then you see a random comparison using two similar groups. In the group that used the plan, admin account takeovers fell by 44% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Treat the comparison as just a story. choice
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Become much more confident, but do not treat one comparison as perfect proof. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, technology, d1

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-008 | Level 1 | Answer A

Prompt. You are unsure whether adding brighter LED streetlights on Maple Street would reduce reported thefts. Then you learn about one small four-week test where reported thefts rose by 12% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence downward a bit, because the test counts against the claim but is small. correct	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Dismiss the negative result as background noise. choice	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, public safety, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-009 | Level 1 | Answer D

Prompt. You are unsure whether expanding peer tutoring in statistics would increase course pass rates. Then you learn that the tutoring room has new chairs. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Treat the side detail as strong evidence. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Do not change confidence much, because the new detail is not evidence about the result. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, education, d1

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-010 | Level 1 | Answer A

Prompt. You are unsure whether showing calorie labels on printed lunch menus would reduce dessert orders. Then you learn about one small four-week test where dessert orders fell by 16% compared with the four weeks before the test. You also learn that dessert prices increased at the same time. How should your confidence in that claim change?

A. Make only a slight upward update, since the result helps but the other change weakens the update. correct	**B.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, nutrition, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-011 | Level 1 | Answer C

Prompt. You are unsure whether sending overdraft warning texts before fees post would reduce overdraft fees. Then you learn about one small four-week test where overdraft fees fell by 24% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Treat the test as strong proof. choice
C. Become somewhat more confident, while remembering that one small test is limited. correct	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, finance, d1

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-012 | Level 1 | Answer B

Prompt. You are unsure whether using timed-entry passes for weekend trail visits would reduce trail crowding complaints. Then you see a random comparison using two similar groups. In the group that used the plan, trail crowding complaints fell by 33% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Give the claim a strong boost because the comparison makes the evidence much better. correct
C. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, environment, d1

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-013 | Level 1 | Answer A

Prompt. You are unsure whether offering free admission on Fridays would increase family visits. Then you learn about one small four-week test where family visits fell by 29% compared with the four weeks before the test. How should your confidence in that claim change?

A. Become somewhat less confident, while remembering that one small test is limited. correct	**B.** Dismiss the negative result as background noise. choice
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, culture, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-014 | Level 1 | Answer D

Prompt. You are unsure whether adding mandatory sideline concussion checks would reduce repeat head injuries. Then you learn that the concussion checklist is printed on yellow paper. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Treat the side detail as strong evidence. choice	**D.** Leave confidence mostly where it was, since the detail does not check the claim. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, sports, d1

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-015 | Level 1 | Answer C

Prompt. You are unsure whether sending donation receipts within one day would increase donor retention. Then you learn about one small four-week test where donor retention rose by 14% compared with the four weeks before the test. You also learn that the nonprofit also launched a matching campaign. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice
C. Adjust upward a bit, while taking the competing explanation seriously. correct	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, nonprofit, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-016 | Level 1 | Answer B

Prompt. You are unsure whether offering monthly lifting-safety and ergonomic training would reduce back-injury claims. Then you learn about one small four-week test where back-injury claims fell by 20% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Treat the result as support for the claim, but keep looking for stronger evidence. correct
C. Treat the test as strong proof. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, workplace safety, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-017 | Level 1 | Answer A

Prompt. You are unsure whether placing compost bins in apartment lobbies would reduce landfill waste from participating buildings. Then you see a random comparison using two similar groups. In the group that used the plan, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Make a sharp upward update, while leaving room for future evidence to matter. correct	**B.** Treat the comparison as just a story. choice
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, environment, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-018 | Level 1 | Answer D

Prompt. You are unsure whether making new user profiles private by default would reduce publicly visible profiles. Then you learn about one small four-week test where publicly visible profiles rose by 48% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Dismiss the negative result as background noise. choice	**D.** Treat the result as evidence against the claim, but not as final disproof. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, technology, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-019 | Level 1 | Answer C

Prompt. You are unsure whether reserving same-day appointment slots would reduce patient no-show rates. Then you learn that the appointment cards are white. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Treat the side detail as strong evidence. choice
C. Treat the detail as mostly irrelevant to whether the plan causes the result. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, health, d1

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-020 | Level 1 | Answer B

Prompt. You are unsure whether boarding passengers by seat zone would reduce average boarding time. Then you learn about one small four-week test where average boarding time fell by 9% compared with the four weeks before the test. You also learn that the airline also reduced carry-on size limits. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Treat the result as some support, but keep the update small because of the other change. correct
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, travel, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-021 | Level 1 | Answer D

Prompt. You are unsure whether launching an online apartment repair portal would reduce unresolved repair requests. Then you learn about one small four-week test where unresolved repair requests fell by 26% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Make a modest upward update because the result points the right way but is still small. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, housing, d1

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-022 | Level 1 | Answer A

Prompt. You are unsure whether moving fruit bowls to the front of the cafeteria line would increase fruit purchases. Then you see a random comparison using two similar groups. In the group that used the plan, fruit purchases rose by 23% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the claim as much more likely, though not guaranteed in every setting. correct	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Treat the comparison as just a story. choice	**D.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, food, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

belief_update-023 | Level 1 | Answer B

Prompt. You are unsure whether giving support agents weekly script coaching would reduce customer complaint rates. Then you learn about one small four-week test where customer complaint rates rose by 18% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Decrease confidence modestly because the result points the wrong way but is still small. correct
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, customer support, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-024 | Level 1 | Answer C

Prompt. You are unsure whether sending automatic household water-leak alerts would reduce average household water use. Then you learn that the water-leak alert screen includes a blue droplet icon. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Treat the side detail as strong evidence. choice
C. Avoid moving confidence much because the detail does not bear on the claim. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, utilities, d1

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-025 | Level 1 | Answer D

Prompt. You are unsure whether sending body-camera activation reminders before patrol shifts would reduce missing-camera-footage reports. Then you learn about one small four-week test where missing-camera-footage reports fell by 35% compared with the four weeks before the test. You also learn that the department also updated supervisor reviews. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Become only a little more confident because the helpful result has another possible cause. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, governance, d1

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-026 | Level 1 | Answer A

Prompt. You are unsure whether offering online mail-ballot tracking would reduce phone calls asking ballot status. Then you learn about one small four-week test where phone calls asking ballot status fell by 42% compared with the four weeks before the test. How should your confidence in that claim change?

A. Raise confidence somewhat, while staying open to better evidence. correct	**B.** Treat the test as strong proof. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, election administration, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-027 | Level 1 | Answer B

Prompt. You are unsure whether sending spaced-review prompts for language vocabulary would increase vocabulary retention quiz scores. Then you see a random comparison using two similar groups. In the group that used the plan, vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Raise confidence a lot, while still avoiding total certainty. correct
C. Treat the comparison as just a story. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, learning, d1

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-028 | Level 1 | Answer C

Prompt. You are unsure whether offering a beginner gym orientation would reduce new-member cancellations. Then you learn about one small four-week test where new-member cancellations rose by 19% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Lower confidence somewhat, while staying open to better evidence. correct	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, fitness, d1

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-029 | Level 1 | Answer D

Prompt. You are unsure whether sending weekly safe-driving feedback would reduce reported minor crashes. Then you learn that the feedback dashboard uses star ratings. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Treat the side detail as strong evidence. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Keep confidence about the same, because that detail does not test whether the plan works. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, insurance, d1

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-030 | Level 1 | Answer A

Prompt. You are unsure whether placing corrections at the top of articles would increase reader trust ratings. Then you learn about one small four-week test where reader trust ratings rose by 7% compared with the four weeks before the test. You also learn that the newsroom also hired a public editor. How should your confidence in that claim change?

A. Nudge confidence upward only a little, because the result helps but another change could explain it. correct	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, media, d1

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-031 | Level 1 | Answer C

Prompt. You are unsure whether requiring clearer price signs at vendor stalls would reduce price disputes. Then you learn about one small four-week test where price disputes fell by 28% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Treat the test as strong proof. choice
C. Shift your confidence upward a bit, because the test helps but does not settle the question. correct	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, local commerce, d1

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-032 | Level 1 | Answer B

Prompt. You are unsure whether sending quiet-hours text reminders to hotel guests would reduce noise complaints from guest rooms. Then you see a random comparison using two similar groups. In the group that used the plan, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Become much more confident, but do not treat one comparison as perfect proof. correct
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, hospitality, d1

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

belief_update-033 | Level 2 | Answer D

Prompt. You are unsure whether extending evening bus service until midnight would reduce late-shift commute complaints. Then you see a random comparison using two similar groups. In the group that used the plan, late-shift commute complaints fell by 22% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Treat the comparison as just a story. choice
C. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**D.** Become much more confident, but do not treat one comparison as perfect proof. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, transportation, d2

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-034 | Level 2 | Answer C

Prompt. You are unsure whether requiring phone lockers during class would reduce classroom disruption reports. Then you learn about one small four-week test where classroom disruption reports rose by 31% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Shift your confidence downward a bit, because the test counts against the claim but is small. correct	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, education, d2

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-035 | Level 2 | Answer B

Prompt. You are unsure whether sending medication reminder texts before evening doses would reduce missed-dose reports. Then you learn that the text messages use a green pill icon. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Do not change confidence much, because the new detail is not evidence about the result. correct
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, health, d2

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-036 | Level 2 | Answer A

Prompt. You are unsure whether testing a Monday-through-Thursday workweek would reduce staff resignations. Then you learn about one small four-week test where staff resignations fell by 15% compared with the four weeks before the test. You also learn that the company also raised salaries that quarter. How should your confidence in that claim change?

A. Make only a slight upward update, since the result helps but the other change weakens the update. correct	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, workplace, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-037 | Level 2 | Answer D

Prompt. You are unsure whether adding larger unit-price labels on shelf tags would reduce shopper overpayment complaints. Then you learn about one small four-week test where shopper overpayment complaints fell by 27% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Shift your confidence upward a bit, because the test helps but does not settle the question. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, retail, d2

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-038 | Level 2 | Answer C

Prompt. You are unsure whether waiving late fines for children's books would increase library card renewals. Then you see a random comparison using two similar groups. In the group that used the plan, library card renewals rose by 19% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Treat the comparison as just a story. choice
C. Give the claim a strong boost because the comparison makes the evidence much better. correct	**D.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, public services, d2

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

belief_update-039 | Level 2 | Answer B

Prompt. You are unsure whether requiring two-factor login for site administrators would reduce admin account takeovers. Then you learn about one small four-week test where admin account takeovers rose by 44% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Become somewhat less confident, while remembering that one small test is limited. correct
C. Dismiss the negative result as background noise. choice	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, technology, d2

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-040 | Level 2 | Answer A

Prompt. You are unsure whether adding brighter LED streetlights on Maple Street would reduce reported thefts. Then you learn that the new light poles are made of aluminum. How should your confidence in that claim change?

A. Leave confidence mostly where it was, since the detail does not check the claim. correct	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, public safety, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-041 | Level 2 | Answer B

Prompt. You are unsure whether expanding peer tutoring in statistics would increase course pass rates. Then you learn about one small four-week test where course pass rates rose by 11% compared with the four weeks before the test. You also learn that the final exam was also shortened. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Adjust upward a bit, while taking the competing explanation seriously. correct
C. Treat the possible other cause as settling the issue. choice	**D.** Ignore the result completely because another change happened too, even though the result still points the right way. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, education, d2

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-042 | Level 2 | Answer A

Prompt. You are unsure whether showing calorie labels on printed lunch menus would reduce dessert orders. Then you learn about one small four-week test where dessert orders fell by 16% compared with the four weeks before the test. How should your confidence in that claim change?

A. Become somewhat more confident, while remembering that one small test is limited. correct	**B.** Treat the test as strong proof. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, nutrition, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-043 | Level 2 | Answer C

Prompt. You are unsure whether sending overdraft warning texts before fees post would reduce overdraft fees. Then you see a random comparison using two similar groups. In the group that used the plan, overdraft fees fell by 24% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Make a sharp upward update, while leaving room for future evidence to matter. correct	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, finance, d2

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-044 | Level 2 | Answer D

Prompt. You are unsure whether using timed-entry passes for weekend trail visits would reduce trail crowding complaints. Then you learn about one small four-week test where trail crowding complaints rose by 33% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Treat the result as evidence against the claim, but not as final disproof. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, environment, d2

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-045 | Level 2 | Answer A

Prompt. You are unsure whether offering free admission on Fridays would increase family visits. Then you learn that the Friday tickets are scanned at the east door. How should your confidence in that claim change?

A. Treat the detail as mostly irrelevant to whether the plan causes the result. correct	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, culture, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-046 | Level 2 | Answer B

Prompt. You are unsure whether adding mandatory sideline concussion checks would reduce repeat head injuries. Then you learn about one small four-week test where repeat head injuries fell by 21% compared with the four weeks before the test. You also learn that the league also shortened the season. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Treat the result as some support, but keep the update small because of the other change. correct
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Ignore the result completely because another change happened too, even though the result still points the right way. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, sports, d2

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-047 | Level 2 | Answer C

Prompt. You are unsure whether sending donation receipts within one day would increase donor retention. Then you learn about one small four-week test where donor retention rose by 14% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Keep confidence exactly the same, because one small test can never matter. choice
C. Treat the result as support for the claim, but keep looking for stronger evidence. correct	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, nonprofit, d2

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-048 | Level 2 | Answer D

Prompt. You are unsure whether offering monthly lifting-safety and ergonomic training would reduce back-injury claims. Then you see a random comparison using two similar groups. In the group that used the plan, back-injury claims fell by 20% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Treat the comparison as just a story. choice	**D.** Treat the claim as much more likely, though not guaranteed in every setting. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, workplace safety, d2

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-049 | Level 2 | Answer A

Prompt. You are unsure whether placing compost bins in apartment lobbies would reduce landfill waste from participating buildings. Then you learn about one small four-week test where landfill waste from participating buildings rose by 17% compared with the four weeks before the test. How should your confidence in that claim change?

A. Decrease confidence modestly because the result points the wrong way but is still small. correct	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Dismiss the negative result as background noise. choice	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, environment, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-050 | Level 2 | Answer B

Prompt. You are unsure whether making new user profiles private by default would reduce publicly visible profiles. Then you learn that the privacy screen uses a shield icon. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Avoid moving confidence much because the detail does not bear on the claim. correct
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, technology, d2

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-051 | Level 2 | Answer C

Prompt. You are unsure whether reserving same-day appointment slots would reduce patient no-show rates. Then you learn about one small four-week test where patient no-show rates fell by 13% compared with the four weeks before the test. You also learn that the clinic also began reminder calls. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Become only a little more confident because the helpful result has another possible cause. correct	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, health, d2

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-052 | Level 2 | Answer D

Prompt. You are unsure whether boarding passengers by seat zone would reduce average boarding time. Then you learn about one small four-week test where average boarding time fell by 9% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Keep confidence exactly the same, because one small test can never matter. choice
C. Treat the test as strong proof. choice	**D.** Make a modest upward update because the result points the right way but is still small. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, travel, d2

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-053 | Level 2 | Answer B

Prompt. You are unsure whether launching an online apartment repair portal would reduce unresolved repair requests. Then you see a random comparison using two similar groups. In the group that used the plan, unresolved repair requests fell by 26% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Raise confidence a lot, while still avoiding total certainty. correct
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, housing, d2

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-054 | Level 2 | Answer A

Prompt. You are unsure whether moving fruit bowls to the front of the cafeteria line would increase fruit purchases. Then you learn about one small four-week test where fruit purchases fell by 23% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence somewhat, while staying open to better evidence. correct	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Dismiss the negative result as background noise. choice	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, food, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-055 | Level 2 | Answer D

Prompt. You are unsure whether giving support agents weekly script coaching would reduce customer complaint rates. Then you learn that the coaching slides use blue headers. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Treat the side detail as strong evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Keep confidence about the same, because that detail does not test whether the plan works. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, customer support, d2

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-056 | Level 2 | Answer C

Prompt. You are unsure whether sending automatic household water-leak alerts would reduce average household water use. Then you learn about one small four-week test where average household water use fell by 10% compared with the four weeks before the test. You also learn that a rainy season began during the study. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Nudge confidence upward only a little, because the result helps but another change could explain it. correct	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, utilities, d2

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-057 | Level 2 | Answer B

Prompt. You are unsure whether sending body-camera activation reminders before patrol shifts would reduce missing-camera-footage reports. Then you learn about one small four-week test where missing-camera-footage reports fell by 35% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Raise confidence somewhat, while staying open to better evidence. correct
C. Treat the test as strong proof. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, governance, d2

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-058 | Level 2 | Answer A

Prompt. You are unsure whether offering online mail-ballot tracking would reduce phone calls asking ballot status. Then you see a random comparison using two similar groups. In the group that used the plan, phone calls asking ballot status fell by 42% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Become much more confident, but do not treat one comparison as perfect proof. correct	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Treat the comparison as just a story. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, election administration, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-059 | Level 2 | Answer D

Prompt. You are unsure whether sending spaced-review prompts for language vocabulary would increase vocabulary retention quiz scores. Then you learn about one small four-week test where vocabulary retention quiz scores fell by 12% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Dismiss the negative result as background noise. choice
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Shift your confidence downward a bit, because the test counts against the claim but is small. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, learning, d2

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-060 | Level 2 | Answer C

Prompt. You are unsure whether offering a beginner gym orientation would reduce new-member cancellations. Then you learn that the orientation mats are black. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Do not change confidence much, because the new detail is not evidence about the result. correct	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, fitness, d2

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-061 | Level 2 | Answer B

Prompt. You are unsure whether sending weekly safe-driving feedback would reduce reported minor crashes. Then you learn about one small four-week test where reported minor crashes fell by 8% compared with the four weeks before the test. You also learn that fuel prices changed driving patterns that month. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Make only a slight upward update, since the result helps but the other change weakens the update. correct
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, insurance, d2

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-062 | Level 2 | Answer A

Prompt. You are unsure whether placing corrections at the top of articles would increase reader trust ratings. Then you learn about one small four-week test where reader trust ratings rose by 7% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence upward a bit, because the test helps but does not settle the question. correct	**B.** Keep confidence exactly the same, because one small test can never matter. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, media, d2

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-063 | Level 2 | Answer C

Prompt. You are unsure whether requiring clearer price signs at vendor stalls would reduce price disputes. Then you see a random comparison using two similar groups. In the group that used the plan, price disputes fell by 28% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Give the claim a strong boost because the comparison makes the evidence much better. correct	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, local commerce, d2

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-064 | Level 2 | Answer D

Prompt. You are unsure whether sending quiet-hours text reminders to hotel guests would reduce noise complaints from guest rooms. Then you learn about one small four-week test where noise complaints from guest rooms rose by 30% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Dismiss the negative result as background noise. choice	**D.** Become somewhat less confident, while remembering that one small test is limited. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, hospitality, d2

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

belief_update-065 | Level 3 | Answer B

Prompt. You are unsure whether extending evening bus service until midnight would reduce late-shift commute complaints. Then you learn about one small four-week test where late-shift commute complaints rose by 22% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Become somewhat less confident, while remembering that one small test is limited. correct
C. Dismiss the negative result as background noise. choice	**D.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, transportation, d3

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-066 | Level 3 | Answer C

Prompt. You are unsure whether requiring phone lockers during class would reduce classroom disruption reports. Then you learn that the lockers are installed near the gym. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Leave confidence mostly where it was, since the detail does not check the claim. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, education, d3

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-067 | Level 3 | Answer D

Prompt. You are unsure whether sending medication reminder texts before evening doses would reduce missed-dose reports. Then you learn about one small four-week test where missed-dose reports fell by 18% compared with the four weeks before the test. You also learn that pharmacists also began follow-up calls. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice
C. Treat the possible other cause as settling the issue. choice	**D.** Adjust upward a bit, while taking the competing explanation seriously. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, health, d3

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-068 | Level 3 | Answer A

Prompt. You are unsure whether testing a Monday-through-Thursday workweek would reduce staff resignations. Then you learn about one small four-week test where staff resignations fell by 15% compared with the four weeks before the test. How should your confidence in that claim change?

A. Become somewhat more confident, while remembering that one small test is limited. correct	**B.** Treat the test as strong proof. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, workplace, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-069 | Level 3 | Answer B

Prompt. You are unsure whether adding larger unit-price labels on shelf tags would reduce shopper overpayment complaints. Then you see a random comparison using two similar groups. In the group that used the plan, shopper overpayment complaints fell by 27% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Give the claim a strong boost because the comparison makes the evidence much better. correct
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, retail, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-070 | Level 3 | Answer C

Prompt. You are unsure whether waiving late fines for children's books would increase library card renewals. Then you learn about one small four-week test where library card renewals fell by 19% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Treat the result as evidence against the claim, but not as final disproof. correct	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, public services, d3

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-071 | Level 3 | Answer D

Prompt. You are unsure whether requiring two-factor login for site administrators would reduce admin account takeovers. Then you learn that the login button changed from green to blue. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Treat the detail as mostly irrelevant to whether the plan causes the result. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, technology, d3

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-072 | Level 3 | Answer A

Prompt. You are unsure whether adding brighter LED streetlights on Maple Street would reduce reported thefts. Then you learn about one small four-week test where reported thefts fell by 12% compared with the four weeks before the test. You also learn that police patrols increased during the same period. How should your confidence in that claim change?

A. Treat the result as some support, but keep the update small because of the other change. correct	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Treat the possible other cause as settling the issue. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, public safety, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-073 | Level 3 | Answer B

Prompt. You are unsure whether expanding peer tutoring in statistics would increase course pass rates. Then you learn about one small four-week test where course pass rates rose by 11% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Treat the result as support for the claim, but keep looking for stronger evidence. correct
C. Treat the test as strong proof. choice	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, education, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-074 | Level 3 | Answer C

Prompt. You are unsure whether showing calorie labels on printed lunch menus would reduce dessert orders. Then you see a random comparison using two similar groups. In the group that used the plan, dessert orders fell by 16% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Make a sharp upward update, while leaving room for future evidence to matter. correct	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, nutrition, d3

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-075 | Level 3 | Answer C

Prompt. You are unsure whether sending overdraft warning texts before fees post would reduce overdraft fees. Then you learn about one small four-week test where overdraft fees rose by 24% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Decrease confidence modestly because the result points the wrong way but is still small. correct	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, finance, d3

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-076 | Level 3 | Answer B

Prompt. You are unsure whether using timed-entry passes for weekend trail visits would reduce trail crowding complaints. Then you learn that the digital passes include a small trail map. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Avoid moving confidence much because the detail does not bear on the claim. correct
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, environment, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-077 | Level 3 | Answer A

Prompt. You are unsure whether offering free admission on Fridays would increase family visits. Then you learn about one small four-week test where family visits rose by 29% compared with the four weeks before the test. You also learn that a new children's exhibit opened the same week. How should your confidence in that claim change?

A. Become only a little more confident because the helpful result has another possible cause. correct	**B.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, culture, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-078 | Level 3 | Answer D

Prompt. You are unsure whether adding mandatory sideline concussion checks would reduce repeat head injuries. Then you learn about one small four-week test where repeat head injuries fell by 21% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Treat the test as strong proof. choice	**D.** Make a modest upward update because the result points the right way but is still small. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, sports, d3

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-079 | Level 3 | Answer C

Prompt. You are unsure whether sending donation receipts within one day would increase donor retention. Then you see a random comparison using two similar groups. In the group that used the plan, donor retention rose by 14% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Treat the claim as much more likely, though not guaranteed in every setting. correct	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, nonprofit, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-080 | Level 3 | Answer B

Prompt. You are unsure whether offering monthly lifting-safety and ergonomic training would reduce back-injury claims. Then you learn about one small four-week test where back-injury claims rose by 20% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Lower confidence somewhat, while staying open to better evidence. correct
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, workplace safety, d3

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-081 | Level 3 | Answer A

Prompt. You are unsure whether placing compost bins in apartment lobbies would reduce landfill waste from participating buildings. Then you learn that the lobby compost bins have foot pedals. How should your confidence in that claim change?

A. Keep confidence about the same, because that detail does not test whether the plan works. correct	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, environment, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-082 | Level 3 | Answer D

Prompt. You are unsure whether making new user profiles private by default would reduce publicly visible profiles. Then you learn about one small four-week test where publicly visible profiles fell by 48% compared with the four weeks before the test. You also learn that the app also deleted inactive accounts. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Nudge confidence upward only a little, because the result helps but another change could explain it. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, technology, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-083 | Level 3 | Answer A

Prompt. You are unsure whether reserving same-day appointment slots would reduce patient no-show rates. Then you learn about one small four-week test where patient no-show rates fell by 13% compared with the four weeks before the test. How should your confidence in that claim change?

A. Raise confidence somewhat, while staying open to better evidence. correct	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, health, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-084 | Level 3 | Answer D

Prompt. You are unsure whether boarding passengers by seat zone would reduce average boarding time. Then you see a random comparison using two similar groups. In the group that used the plan, average boarding time fell by 9% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Treat the comparison as just a story. choice	**D.** Raise confidence a lot, while still avoiding total certainty. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, travel, d3

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-085 | Level 3 | Answer B

Prompt. You are unsure whether launching an online apartment repair portal would reduce unresolved repair requests. Then you learn about one small four-week test where unresolved repair requests rose by 26% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Shift your confidence downward a bit, because the test counts against the claim but is small. correct
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, housing, d3

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-086 | Level 3 | Answer C

Prompt. You are unsure whether moving fruit bowls to the front of the cafeteria line would increase fruit purchases. Then you learn that the fruit bowls are ceramic. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Treat the side detail as strong evidence. choice
C. Do not change confidence much, because the new detail is not evidence about the result. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, food, d3

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-087 | Level 3 | Answer D

Prompt. You are unsure whether giving support agents weekly script coaching would reduce customer complaint rates. Then you learn about one small four-week test where customer complaint rates fell by 18% compared with the four weeks before the test. You also learn that the call queue was also shortened. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Treat the possible other cause as settling the issue. choice	**D.** Make only a slight upward update, since the result helps but the other change weakens the update. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, customer support, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-088 | Level 3 | Answer A

Prompt. You are unsure whether sending automatic household water-leak alerts would reduce average household water use. Then you learn about one small four-week test where average household water use fell by 10% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence upward a bit, because the test helps but does not settle the question. correct	**B.** Keep confidence exactly the same, because one small test can never matter. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, utilities, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-089 | Level 3 | Answer B

Prompt. You are unsure whether sending body-camera activation reminders before patrol shifts would reduce missing-camera-footage reports. Then you see a random comparison using two similar groups. In the group that used the plan, missing-camera-footage reports fell by 35% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Become much more confident, but do not treat one comparison as perfect proof. correct
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, governance, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-090 | Level 3 | Answer C

Prompt. You are unsure whether offering online mail-ballot tracking would reduce phone calls asking ballot status. Then you learn about one small four-week test where phone calls asking ballot status rose by 42% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Become somewhat less confident, while remembering that one small test is limited. correct	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, election administration, d3

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-091 | Level 3 | Answer D

Prompt. You are unsure whether sending spaced-review prompts for language vocabulary would increase vocabulary retention quiz scores. Then you learn that the review prompts use a bell icon. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Leave confidence mostly where it was, since the detail does not check the claim. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, learning, d3

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-092 | Level 3 | Answer A

Prompt. You are unsure whether offering a beginner gym orientation would reduce new-member cancellations. Then you learn about one small four-week test where new-member cancellations fell by 19% compared with the four weeks before the test. You also learn that the gym also discounted annual plans. How should your confidence in that claim change?

A. Adjust upward a bit, while taking the competing explanation seriously. correct	**B.** Treat the possible other cause as settling the issue. choice
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, fitness, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-093 | Level 3 | Answer D

Prompt. You are unsure whether sending weekly safe-driving feedback would reduce reported minor crashes. Then you learn about one small four-week test where reported minor crashes fell by 8% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the test as strong proof. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Become somewhat more confident, while remembering that one small test is limited. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, insurance, d3

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-094 | Level 3 | Answer A

Prompt. You are unsure whether placing corrections at the top of articles would increase reader trust ratings. Then you see a random comparison using two similar groups. In the group that used the plan, reader trust ratings rose by 7% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Give the claim a strong boost because the comparison makes the evidence much better. correct	**B.** Treat the comparison as just a story. choice
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, media, d3

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-095 | Level 3 | Answer C

Prompt. You are unsure whether requiring clearer price signs at vendor stalls would reduce price disputes. Then you learn about one small four-week test where price disputes rose by 28% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Treat the result as evidence against the claim, but not as final disproof. correct	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, local commerce, d3

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-096 | Level 3 | Answer B

Prompt. You are unsure whether sending quiet-hours text reminders to hotel guests would reduce noise complaints from guest rooms. Then you learn that the quiet-hours text reminder uses a small moon icon. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Treat the detail as mostly irrelevant to whether the plan causes the result. correct
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, hospitality, d3

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

belief_update-097 | Level 4 | Answer D

Prompt. You are unsure whether extending evening bus service until midnight would reduce late-shift commute complaints. Then you learn that the new buses were repainted blue. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Treat the side detail as strong evidence. choice	**D.** Treat the detail as mostly irrelevant to whether the plan causes the result. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, transportation, d4

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-098 | Level 4 | Answer C

Prompt. You are unsure whether requiring phone lockers during class would reduce classroom disruption reports. Then you learn about one small four-week test where classroom disruption reports fell by 31% compared with the four weeks before the test. You also learn that a new hall monitor schedule began at the same time. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Treat the result as some support, but keep the update small because of the other change. correct	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, education, d4

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-099 | Level 4 | Answer B

Prompt. You are unsure whether sending medication reminder texts before evening doses would reduce missed-dose reports. Then you learn about one small four-week test where missed-dose reports fell by 18% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Treat the result as support for the claim, but keep looking for stronger evidence. correct
C. Treat the test as strong proof. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, health, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-100 | Level 4 | Answer A

Prompt. You are unsure whether testing a Monday-through-Thursday workweek would reduce staff resignations. Then you see a random comparison using two similar groups. In the group that used the plan, staff resignations fell by 15% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Make a sharp upward update, while leaving room for future evidence to matter. correct	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Treat the comparison as just a story. choice	**D.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, workplace, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

belief_update-101 | Level 4 | Answer D

Prompt. You are unsure whether adding larger unit-price labels on shelf tags would reduce shopper overpayment complaints. Then you learn about one small four-week test where shopper overpayment complaints rose by 27% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Dismiss the negative result as background noise. choice	**D.** Treat the result as evidence against the claim, but not as final disproof. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, retail, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-102 | Level 4 | Answer C

Prompt. You are unsure whether waiving late fines for children's books would increase library card renewals. Then you learn that the children's-book checkout desk moved six feet. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Avoid moving confidence much because the detail does not bear on the claim. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, public services, d4

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-103 | Level 4 | Answer B

Prompt. You are unsure whether requiring two-factor login for site administrators would reduce admin account takeovers. Then you learn about one small four-week test where admin account takeovers fell by 44% compared with the four weeks before the test. You also learn that some high-risk admin accounts were removed earlier. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Become only a little more confident because the helpful result has another possible cause. correct
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, technology, d4

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-104 | Level 4 | Answer A

Prompt. You are unsure whether adding brighter LED streetlights on Maple Street would reduce reported thefts. Then you learn about one small four-week test where reported thefts fell by 12% compared with the four weeks before the test. How should your confidence in that claim change?

A. Make a modest upward update because the result points the right way but is still small. correct	**B.** Treat the test as strong proof. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, public safety, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-105 | Level 4 | Answer D

Prompt. You are unsure whether expanding peer tutoring in statistics would increase course pass rates. Then you see a random comparison using two similar groups. In the group that used the plan, course pass rates rose by 11% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Treat the comparison as just a story. choice	**D.** Treat the claim as much more likely, though not guaranteed in every setting. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, education, d4

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-106 | Level 4 | Answer C

Prompt. You are unsure whether showing calorie labels on printed lunch menus would reduce dessert orders. Then you learn about one small four-week test where dessert orders rose by 16% compared with the four weeks before the test. How should your confidence in that claim change?

A. Dismiss the negative result as background noise. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Decrease confidence modestly because the result points the wrong way but is still small. correct	**D.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, nutrition, d4

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-107 | Level 4 | Answer A

Prompt. You are unsure whether sending overdraft warning texts before fees post would reduce overdraft fees. Then you learn that the warning texts arrive from a short code. How should your confidence in that claim change?

A. Keep confidence about the same, because that detail does not test whether the plan works. correct	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Treat the side detail as strong evidence. choice	**D.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, finance, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

belief_update-108 | Level 4 | Answer B

Prompt. You are unsure whether using timed-entry passes for weekend trail visits would reduce trail crowding complaints. Then you learn about one small four-week test where trail crowding complaints fell by 33% compared with the four weeks before the test. You also learn that a nearby trail reopened that month. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Nudge confidence upward only a little, because the result helps but another change could explain it. correct
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, environment, d4

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-109 | Level 4 | Answer C

Prompt. You are unsure whether offering free admission on Fridays would increase family visits. Then you learn about one small four-week test where family visits rose by 29% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Treat the test as strong proof. choice
C. Raise confidence somewhat, while staying open to better evidence. correct	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, culture, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-110 | Level 4 | Answer D

Prompt. You are unsure whether adding mandatory sideline concussion checks would reduce repeat head injuries. Then you see a random comparison using two similar groups. In the group that used the plan, repeat head injuries fell by 21% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Raise confidence a lot, while still avoiding total certainty. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, sports, d4

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-111 | Level 4 | Answer C

Prompt. You are unsure whether sending donation receipts within one day would increase donor retention. Then you learn about one small four-week test where donor retention fell by 14% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Lower confidence somewhat, while staying open to better evidence. correct	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, nonprofit, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-112 | Level 4 | Answer A

Prompt. You are unsure whether offering monthly lifting-safety and ergonomic training would reduce back-injury claims. Then you learn that the training room has a ceiling-mounted projector. How should your confidence in that claim change?

A. Do not change confidence much, because the new detail is not evidence about the result. correct	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, workplace safety, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-113 | Level 4 | Answer C

Prompt. You are unsure whether placing compost bins in apartment lobbies would reduce landfill waste from participating buildings. Then you learn about one small four-week test where landfill waste from participating buildings fell by 17% compared with the four weeks before the test. You also learn that trash pickup schedules also changed. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Make only a slight upward update, since the result helps but the other change weakens the update. correct	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, environment, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-114 | Level 4 | Answer A

Prompt. You are unsure whether making new user profiles private by default would reduce publicly visible profiles. Then you learn about one small four-week test where publicly visible profiles fell by 48% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence upward a bit, because the test helps but does not settle the question. correct	**B.** Treat the test as strong proof. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Lower confidence because the test is small, even though its result points the right way. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, technology, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-115 | Level 4 | Answer C

Prompt. You are unsure whether reserving same-day appointment slots would reduce patient no-show rates. Then you see a random comparison using two similar groups. In the group that used the plan, patient no-show rates fell by 13% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Treat the comparison as just a story. choice
C. Become much more confident, but do not treat one comparison as perfect proof. correct	**D.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, health, d4

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

belief_update-116 | Level 4 | Answer A

Prompt. You are unsure whether boarding passengers by seat zone would reduce average boarding time. Then you learn about one small four-week test where average boarding time rose by 9% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence downward a bit, because the test counts against the claim but is small. correct	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, travel, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-117 | Level 4 | Answer B

Prompt. You are unsure whether launching an online apartment repair portal would reduce unresolved repair requests. Then you learn that the repair portal uses a house logo. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Leave confidence mostly where it was, since the detail does not check the claim. correct
C. Treat the side detail as strong evidence. choice	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, housing, d4

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-118 | Level 4 | Answer D

Prompt. You are unsure whether moving fruit bowls to the front of the cafeteria line would increase fruit purchases. Then you learn about one small four-week test where fruit purchases rose by 23% compared with the four weeks before the test. You also learn that a fruit discount started that week. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Ignore the result completely because another change happened too, even though the result still points the right way. choice
C. Treat the possible other cause as settling the issue. choice	**D.** Adjust upward a bit, while taking the competing explanation seriously. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, food, d4

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-119 | Level 4 | Answer B

Prompt. You are unsure whether giving support agents weekly script coaching would reduce customer complaint rates. Then you learn about one small four-week test where customer complaint rates fell by 18% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Become somewhat more confident, while remembering that one small test is limited. correct
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, customer support, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-120 | Level 4 | Answer A

Prompt. You are unsure whether sending automatic household water-leak alerts would reduce average household water use. Then you see a random comparison using two similar groups. In the group that used the plan, average household water use fell by 10% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Give the claim a strong boost because the comparison makes the evidence much better. correct	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Treat the comparison as just a story. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, utilities, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-121 | Level 4 | Answer B

Prompt. You are unsure whether sending body-camera activation reminders before patrol shifts would reduce missing-camera-footage reports. Then you learn about one small four-week test where missing-camera-footage reports rose by 35% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Become somewhat less confident, while remembering that one small test is limited. correct
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, governance, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-122 | Level 4 | Answer D

Prompt. You are unsure whether offering online mail-ballot tracking would reduce phone calls asking ballot status. Then you learn that the ballot-tracking page uses county colors. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Treat the side detail as strong evidence. choice
C. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**D.** Treat the detail as mostly irrelevant to whether the plan causes the result. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, election administration, d4

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

C feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-123 | Level 4 | Answer B

Prompt. You are unsure whether sending spaced-review prompts for language vocabulary would increase vocabulary retention quiz scores. Then you learn about one small four-week test where vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. You also learn that the app also changed the quiz format. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Treat the result as some support, but keep the update small because of the other change. correct
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Ignore the result completely because another change happened too, even though the result still points the right way. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, learning, d4

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-124 | Level 4 | Answer D

Prompt. You are unsure whether offering a beginner gym orientation would reduce new-member cancellations. Then you learn about one small four-week test where new-member cancellations fell by 19% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Treat the test as strong proof. choice	**D.** Treat the result as support for the claim, but keep looking for stronger evidence. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, fitness, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-125 | Level 4 | Answer B

Prompt. You are unsure whether sending weekly safe-driving feedback would reduce reported minor crashes. Then you see a random comparison using two similar groups. In the group that used the plan, reported minor crashes fell by 8% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Make a sharp upward update, while leaving room for future evidence to matter. correct
C. Treat the comparison as just a story. choice	**D.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, insurance, d4

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

belief_update-126 | Level 4 | Answer A

Prompt. You are unsure whether placing corrections at the top of articles would increase reader trust ratings. Then you learn about one small four-week test where reader trust ratings fell by 7% compared with the four weeks before the test. How should your confidence in that claim change?

A. Treat the result as evidence against the claim, but not as final disproof. correct	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, media, d4

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-127 | Level 4 | Answer C

Prompt. You are unsure whether requiring clearer price signs at vendor stalls would reduce price disputes. Then you learn that the stall price signs are laminated. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Avoid moving confidence much because the detail does not bear on the claim. correct	**D.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, local commerce, d4

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

belief_update-128 | Level 4 | Answer D

Prompt. You are unsure whether sending quiet-hours text reminders to hotel guests would reduce noise complaints from guest rooms. Then you learn about one small four-week test where noise complaints from guest rooms fell by 30% compared with the four weeks before the test. You also learn that the hotel also changed room assignments. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Become only a little more confident because the helpful result has another possible cause. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, hospitality, d4

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

belief_update-129 | Level 5 | Answer A

Prompt. You are unsure whether extending evening bus service until midnight would reduce late-shift commute complaints. Then you learn about one small four-week test where late-shift commute complaints fell by 22% compared with the four weeks before the test. You also learn that a large employer started a private shuttle the same month. How should your confidence in that claim change?

A. Become only a little more confident because the helpful result has another possible cause. correct	**B.** Treat the possible other cause as settling the issue. choice
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Ignore the result completely because another change happened too, even though the result still points the right way. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, transportation, d5

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-130 | Level 5 | Answer B

Prompt. You are unsure whether requiring phone lockers during class would reduce classroom disruption reports. Then you learn about one small four-week test where classroom disruption reports fell by 31% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Make a modest upward update because the result points the right way but is still small. correct
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, education, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-131 | Level 5 | Answer C

Prompt. You are unsure whether sending medication reminder texts before evening doses would reduce missed-dose reports. Then you see a random comparison using two similar groups. In the group that used the plan, missed-dose reports fell by 18% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Treat the claim as much more likely, though not guaranteed in every setting. correct	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, health, d5

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-132 | Level 5 | Answer D

Prompt. You are unsure whether testing a Monday-through-Thursday workweek would reduce staff resignations. Then you learn about one small four-week test where staff resignations rose by 15% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Dismiss the negative result as background noise. choice
C. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**D.** Decrease confidence modestly because the result points the wrong way but is still small. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, workplace, d5

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-133 | Level 5 | Answer A

Prompt. You are unsure whether adding larger unit-price labels on shelf tags would reduce shopper overpayment complaints. Then you learn that the shelf labels use bold black numbers. How should your confidence in that claim change?

A. Avoid moving confidence much because the detail does not bear on the claim. correct	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, retail, d5

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-134 | Level 5 | Answer B

Prompt. You are unsure whether waiving late fines for children's books would increase library card renewals. Then you learn about one small four-week test where library card renewals rose by 19% compared with the four weeks before the test. You also learn that the library also opened on Sundays. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Nudge confidence upward only a little, because the result helps but another change could explain it. correct
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, public services, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-135 | Level 5 | Answer C

Prompt. You are unsure whether requiring two-factor login for site administrators would reduce admin account takeovers. Then you learn about one small four-week test where admin account takeovers fell by 44% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Treat the test as strong proof. choice
C. Raise confidence somewhat, while staying open to better evidence. correct	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, technology, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-136 | Level 5 | Answer D

Prompt. You are unsure whether adding brighter LED streetlights on Maple Street would reduce reported thefts. Then you see a random comparison using two similar groups. In the group that used the plan, reported thefts fell by 12% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**D.** Raise confidence a lot, while still avoiding total certainty. correct

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, public safety, d5

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

belief_update-137 | Level 5 | Answer C

Prompt. You are unsure whether expanding peer tutoring in statistics would increase course pass rates. Then you learn about one small four-week test where course pass rates fell by 11% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Lower confidence somewhat, while staying open to better evidence. correct	**D.** Dismiss the negative result as background noise. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, education, d5

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-138 | Level 5 | Answer D

Prompt. You are unsure whether showing calorie labels on printed lunch menus would reduce dessert orders. Then you learn that the lunch menus are printed on thicker paper. How should your confidence in that claim change?

A. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Treat the side detail as strong evidence. choice	**D.** Keep confidence about the same, because that detail does not test whether the plan works. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, nutrition, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-139 | Level 5 | Answer B

Prompt. You are unsure whether sending overdraft warning texts before fees post would reduce overdraft fees. Then you learn about one small four-week test where overdraft fees fell by 24% compared with the four weeks before the test. You also learn that the bank also changed its fee grace period. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Make only a slight upward update, since the result helps but the other change weakens the update. correct
C. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**D.** Treat the possible other cause as settling the issue. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, finance, d5

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

belief_update-140 | Level 5 | Answer D

Prompt. You are unsure whether using timed-entry passes for weekend trail visits would reduce trail crowding complaints. Then you learn about one small four-week test where trail crowding complaints fell by 33% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because one small test can never matter. choice	**B.** Treat the test as strong proof. choice
C. Lower confidence because the test is small, even though its result points the right way. choice	**D.** Shift your confidence upward a bit, because the test helps but does not settle the question. correct

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, environment, d5

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

belief_update-141 | Level 5 | Answer B

Prompt. You are unsure whether offering free admission on Fridays would increase family visits. Then you see a random comparison using two similar groups. In the group that used the plan, family visits rose by 29% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**B.** Become much more confident, but do not treat one comparison as perfect proof. correct
C. Treat the comparison as just a story. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, culture, d5

A feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-142 | Level 5 | Answer A

Prompt. You are unsure whether adding mandatory sideline concussion checks would reduce repeat head injuries. Then you learn about one small four-week test where repeat head injuries rose by 21% compared with the four weeks before the test. How should your confidence in that claim change?

A. Shift your confidence downward a bit, because the test counts against the claim but is small. correct	**B.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice
C. Dismiss the negative result as background noise. choice	**D.** Drop confidence all the way to zero, because one small test against a claim settles it. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, sports, d5

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-143 | Level 5 | Answer D

Prompt. You are unsure whether sending donation receipts within one day would increase donor retention. Then you learn that the receipt email subject line changed. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice
C. Treat the side detail as strong evidence. choice	**D.** Do not change confidence much, because the new detail is not evidence about the result. correct

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, nonprofit, d5

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

belief_update-144 | Level 5 | Answer C

Prompt. You are unsure whether offering monthly lifting-safety and ergonomic training would reduce back-injury claims. Then you learn about one small four-week test where back-injury claims fell by 20% compared with the four weeks before the test. You also learn that new lifting equipment arrived that quarter. How should your confidence in that claim change?

A. Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice	**B.** Treat the possible other cause as settling the issue. choice
C. Adjust upward a bit, while taking the competing explanation seriously. correct	**D.** Ignore the result completely because another change happened too, even though the result still points the right way. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, workplace safety, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-145 | Level 5 | Answer B

Prompt. You are unsure whether placing compost bins in apartment lobbies would reduce landfill waste from participating buildings. Then you learn about one small four-week test where landfill waste from participating buildings fell by 17% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Become somewhat more confident, while remembering that one small test is limited. correct
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, environment, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-146 | Level 5 | Answer A

Prompt. You are unsure whether making new user profiles private by default would reduce publicly visible profiles. Then you see a random comparison using two similar groups. In the group that used the plan, publicly visible profiles fell by 48% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Give the claim a strong boost because the comparison makes the evidence much better. correct	**B.** Treat the comparison as just a story. choice
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, technology, d5

A feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-147 | Level 5 | Answer D

Prompt. You are unsure whether reserving same-day appointment slots would reduce patient no-show rates. Then you learn about one small four-week test where patient no-show rates rose by 13% compared with the four weeks before the test. How should your confidence in that claim change?

A. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**B.** Drop confidence all the way to zero, because one small test against a claim settles it. choice
C. Dismiss the negative result as background noise. choice	**D.** Become somewhat less confident, while remembering that one small test is limited. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-opposition, health, d5

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-148 | Level 5 | Answer B

Prompt. You are unsure whether boarding passengers by seat zone would reduce average boarding time. Then you learn that the gate signs are backlit. How should your confidence in that claim change?

A. Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice	**B.** Leave confidence mostly where it was, since the detail does not check the claim. correct
C. Treat the side detail as strong evidence. choice	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, travel, d5

A feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

B feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

C feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-149 | Level 5 | Answer A

Prompt. You are unsure whether launching an online apartment repair portal would reduce unresolved repair requests. Then you learn about one small four-week test where unresolved repair requests fell by 26% compared with the four weeks before the test. You also learn that the landlord hired two additional repair technicians. How should your confidence in that claim change?

A. Treat the result as some support, but keep the update small because of the other change. correct	**B.** Treat the possible other cause as settling the issue. choice
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, mixed-support, housing, d5

A feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

B feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-150 | Level 5 | Answer C

Prompt. You are unsure whether moving fruit bowls to the front of the cafeteria line would increase fruit purchases. Then you learn about one small four-week test where fruit purchases rose by 23% compared with the four weeks before the test. How should your confidence in that claim change?

A. Lower confidence because the test is small, even though its result points the right way. choice	**B.** Treat the test as strong proof. choice
C. Treat the result as support for the claim, but keep looking for stronger evidence. correct	**D.** Keep confidence exactly the same, because one small test can never matter. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, small-support, food, d5

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-151 | Level 5 | Answer C

Prompt. You are unsure whether giving support agents weekly script coaching would reduce customer complaint rates. Then you see a random comparison using two similar groups. In the group that used the plan, customer complaint rates fell by 18% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Treat the comparison as just a story. choice	**B.** Keep confidence unchanged because comparison groups make the result harder to summarize. choice
C. Make a sharp upward update, while leaving room for future evidence to matter. correct	**D.** Lower confidence because comparison groups weaken evidence instead of strengthening it. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, strong-support, customer support, d5

A feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

B feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

C feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-152 | Level 5 | Answer D

Prompt. You are unsure whether sending automatic household water-leak alerts would reduce average household water use. Then you learn about one small four-week test where average household water use rose by 10% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Dismiss the negative result as background noise. choice
C. Keep confidence exactly the same, because a small negative test is never worth noticing. choice	**D.** Treat the result as evidence against the claim, but not as final disproof. correct

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

belief_update-153 | Level 5 | Answer C

Prompt. You are unsure whether sending body-camera activation reminders before patrol shifts would reduce missing-camera-footage reports. Then you learn that the reminder tone is two beeps. How should your confidence in that claim change?

A. Treat the side detail as strong evidence. choice	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Treat the detail as mostly irrelevant to whether the plan causes the result. correct	**D.** Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

Tags: belief_update, belief-update, irrelevant-detail, governance, d5

A feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-154 | Level 5 | Answer D

Prompt. You are unsure whether offering online mail-ballot tracking would reduce phone calls asking ballot status. Then you learn about one small four-week test where phone calls asking ballot status fell by 42% compared with the four weeks before the test. You also learn that the office also expanded its phone staff. How should your confidence in that claim change?

A. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**B.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice
C. Treat the possible other cause as settling the issue. choice	**D.** Become only a little more confident because the helpful result has another possible cause. correct

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is D because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

D feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

belief_update-155 | Level 5 | Answer A

Prompt. You are unsure whether sending spaced-review prompts for language vocabulary would increase vocabulary retention quiz scores. Then you learn about one small four-week test where vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. How should your confidence in that claim change?

A. Make a modest upward update because the result points the right way but is still small. correct	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the right way should raise confidence somewhat, but it is not final proof.

B feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

belief_update-156 | Level 5 | Answer B

Prompt. You are unsure whether offering a beginner gym orientation would reduce new-member cancellations. Then you see a random comparison using two similar groups. In the group that used the plan, new-member cancellations fell by 19% compared with the four weeks before the test. In the group without the plan, the same result did not improve. How should your confidence in that claim change?

A. Lower confidence because comparison groups weaken evidence instead of strengthening it. choice	**B.** Treat the claim as much more likely, though not guaranteed in every setting. correct
C. Keep confidence unchanged because comparison groups make the result harder to summarize. choice	**D.** Treat the comparison as just a story. choice

Core explanation. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

B feedback (Correct): Correct. This is the right size and direction of belief change. A fair comparison is stronger evidence, so confidence should rise more, but not to 100%.

C feedback (Distractor): Not quite. This answer updates by the wrong amount or in the wrong direction for the evidence given.

D feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

belief_update-157 | Level 5 | Answer C

Prompt. You are unsure whether sending weekly safe-driving feedback would reduce reported minor crashes. Then you learn about one small four-week test where reported minor crashes rose by 8% compared with the four weeks before the test. How should your confidence in that claim change?

A. Drop confidence all the way to zero, because one small test against a claim settles it. choice	**B.** Dismiss the negative result as background noise. choice
C. Decrease confidence modestly because the result points the wrong way but is still small. correct	**D.** Keep confidence exactly the same, because a small negative test is never worth noticing. choice

Core explanation. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is C because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Distractor): Not quite. The evidence may matter, but this answer overreacts by treating limited evidence as certainty.

B feedback (Distractor): Not quite. Evidence can be limited and still matter. The right move is to update by the right amount, not dismiss it.

C feedback (Correct): Correct. This is the right size and direction of belief change. A small test that points the wrong way should lower confidence somewhat, but it is not final proof.

D feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

belief_update-158 | Level 5 | Answer A

Prompt. You are unsure whether placing corrections at the top of articles would increase reader trust ratings. Then you learn that the correction box has a gray border. How should your confidence in that claim change?

A. Avoid moving confidence much because the detail does not bear on the claim. correct	**B.** Make a large update because any new information about the topic should move confidence, even if it is not evidence. choice
C. Lower confidence because any side detail weakens the idea, even when it is unrelated to the result. choice	**D.** Treat the side detail as strong evidence. choice

Core explanation. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Correct): Correct. This is the right size and direction of belief change. Irrelevant information should not move confidence much, even when it sounds connected to the topic.

B feedback (Distractor): Not quite. Confidence should move because of relevant evidence, not just because a new detail appeared.

C feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

D feedback (Distractor): Not quite. The detail does not test the claim, so it should not move confidence much.

belief_update-159 | Level 5 | Answer B

Prompt. You are unsure whether requiring clearer price signs at vendor stalls would reduce price disputes. Then you learn about one small four-week test where price disputes fell by 28% compared with the four weeks before the test. You also learn that the market also added a weekend help desk. How should your confidence in that claim change?

A. Treat the possible other cause as settling the issue. choice	**B.** Nudge confidence upward only a little, because the result helps but another change could explain it. correct
C. Ignore the result completely because another change happened too, even though the result still points the right way. choice	**D.** Lower confidence sharply because the other change proves the plan did not help, even though the test result improved. choice

Core explanation. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is B because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.

A feedback (Distractor): Not quite. A possible other cause should make the update smaller, but it does not settle the issue by itself.

B feedback (Correct): Correct. This is the right size and direction of belief change. Mixed evidence can still matter, but the possible alternative explanation should keep the update small.

C feedback (Distractor): Not quite. Limited or mixed evidence may deserve only a small update, but ignoring relevant evidence throws away information.

D feedback (Distractor): Not quite. This moves confidence in the wrong direction for evidence that supports the claim.

belief_update-160 | Level 5 | Answer A

Prompt. You are unsure whether sending quiet-hours text reminders to hotel guests would reduce noise complaints from guest rooms. Then you learn about one small four-week test where noise complaints from guest rooms fell by 30% compared with the four weeks before the test. How should your confidence in that claim change?

A. Raise confidence somewhat, while staying open to better evidence. correct	**B.** Lower confidence because the test is small, even though its result points the right way. choice
C. Keep confidence exactly the same, because one small test can never matter. choice	**D.** Treat the test as strong proof. choice

Core explanation. A small test that points the right way should raise confidence somewhat, but it is not final proof.

Process commentary. To uncover the answer, choose both the direction and the size of the confidence change. The correct choice is A because it moves belief in proportion to the evidence instead of ignoring or overreacting to it.
