Skill 05

Test Relevance

Does That Matter?

160 Items	**1-5** Levels	**Decide whether a fact actually matters for the claim.** Objective

Essential question. Which fact actually helps us judge the claim?

This PDF is designed for classroom use. It gives teachers a rigorous introduction to the skill, a repeatable solving routine, likely student confusions, a worked example, and the full XiXteen item set with choice-level feedback.

Generated from the current XiXteen corpus on 2026-10-29.

Skill 05

Test Relevance

Does That Matter?

Decide whether a fact actually matters for the claim. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Which fact actually helps us judge the claim?
Why it matters	Relevant evidence bears on the claim; irrelevant detail merely stands nearby. This skill protects students from being impressed by vivid facts that do not actually test the point at issue.
Conceptual core	Relevance is about fit. Evidence can be vivid, surprising, or emotionally interesting while still not bearing on the claim. Students should learn to anchor each relevance judgment in the claim's action, target group, and outcome. A relevant fact does not have to prove the claim by itself; it just has to make the claim easier or harder to assess.
Student method	Match the evidence to the claim's action, group, and measured result. If a fact does not help decide whether that specific claim is true, it is probably a side detail.
Analogy	Relevance is a spotlight. A bright detail can still be pointed at the wrong part of the stage.
Assessment focus	A good answer identifies the fact that bears most directly on the claim's action, target group, and outcome.

Teaching Sequence

1. Circle the action, group, and outcome in the claim.

2. Ask whether each option speaks to one of those anchors.

3. Reject decorative details that only share the same topic.

4. Prefer evidence from similar conditions when the claim is about whether a plan will work.

Common Confusions To Watch For

1. Students may pick a fact because it mentions the same setting or people.

2. Students may think irrelevant means false, even though irrelevant facts can be true.

3. Students may demand conclusive proof when the task only asks what matters most.

Teacher Prompts

1. Does this fact help decide the claim, or does it just sit near the claim?

2. Which part of the claim does this evidence touch?

3. If this fact changed, would our view of the claim change?

Worked Example

Scenario	A hotel manager claims quiet-hour text reminders will reduce hallway noise complaints from overnight guests.
Teacher think-aloud	A photo of the hotel lobby is not relevant. Complaint rates after a similar reminder program at comparable hotels are relevant because they match the action and outcome.
Student takeaway	Relevant evidence touches the exact claim, not just the general topic.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A hotel manager claims text reminders reduce hallway noise complaints. Fact A: comparable floors receiving reminders had four complaints per 100 occupied room-nights, versus seven on floors without reminders in the same month. Fact B: most guests liked the new lobby painting. A room-night means one occupied room for one night.

What To Do

1. Name the action and the outcome in the claim.

2. Choose which fact bears directly on the claim and explain the connection.

3. Explain why the other fact does not answer this question, even if it is true.

Check before reading the answer. Have you linked the evidence to reminders and noise complaints, rather than to general guest satisfaction?

Model Answer

The action is sending text reminders; the outcome is hallway noise complaints. Fact A compares that outcome with and without reminders using the same unit. Fact B concerns a painting and does not show whether reminders affect noise complaints.

Why it is adequate. The answer explains relevance through the specific action and outcome. Relevance alone does not prove the comparison establishes cause.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

Riley claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**D.** The new buses were repainted blue.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 2

Level 1

Maya claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**B.** Researchers measured the actual result before and after the plan was tried.
C. The lockers are installed near the gym.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 3

Level 1

Sam claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 4

Level 1

Avery claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A report says some software engineers liked the idea, but it does not check the claimed result.	**D.** A matched group that did not use the plan was tracked so the result could be compared.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 5

Level 1

Taylor claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The report checked shopper overpayment complaints, not just whether people said they liked the idea.	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**D.** The shelf labels use bold black numbers.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 6

Level 1

Morgan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. The children's-book checkout desk moved six feet.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 7

Level 1

Casey claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue.	**B.** A report says some site administrators liked the idea, but it does not check the claimed result.
C. The report tracked the claimed result both before the plan and after the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 8

Level 1

Jordan claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**D.** The report checks the claimed result among the people the plan is supposed to affect.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 9

Level 1

Riley claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. Researchers included a similar group without the plan, giving the result a fair comparison.	**D.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 10

Level 1

Maya claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result.
C. The lunch menus are printed on thicker paper.	**D.** Direct measurement tracks dessert orders instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 11

Level 1

Sam claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. The warning texts arrive from a short code.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 12

Level 1

Avery claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map.	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**D.** Before-and-after data compare the result from before the plan with the result after it began.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 13

Level 1

Taylor claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** Data come from the target group, not from a different group with different needs.
C. A report says some local families liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 14

Level 1

Morgan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A comparison group was tracked at the same time, so the plan's result could be checked.	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** The concussion checklist is printed on yellow paper.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 15

Level 1

Casey claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. The receipt email subject line changed.	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**D.** The report focuses on donor retention, which is the result named in the claim.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 16

Level 1

Jordan claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** The training room has a ceiling-mounted projector.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 17

Level 1

Riley claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**B.** A careful check focused on the result named in the claim, not just people's reactions to the idea.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 18

Level 1

Maya claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Researchers looked at the result for the same people the proposal is meant to help.	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 19

Level 1

Sam claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. The appointment cards are white.	**D.** The report compares the target group with a similar group that did not use the plan.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 20

Level 1

Avery claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**B.** A careful check measured whether average boarding time changed, not merely whether people approved of the plan.
C. The gate signs are backlit.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 21

Level 1

Taylor claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area.	**B.** A report says some apartment tenants liked the idea, but it does not check the claimed result.
C. The repair portal uses a house logo.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 22

Level 1

Morgan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic.	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result.
C. The report measures whether the result actually changed after the plan was used.	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 23

Level 1

Casey claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** The coaching slides use blue headers.
C. The report measures the claimed result in the group named in the proposal.	**D.** A report says some support agents liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 24

Level 1

Jordan claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The water-leak alert screen includes a blue droplet icon.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** A no-plan group was measured too, making the result easier to interpret.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 25

Level 1

Riley claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.
C. Because it is about missing-camera-footage reports, the fact speaks to the exact result being claimed.	**D.** The reminder tone is two beeps.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 26

Level 1

Maya claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.
C. The ballot-tracking page uses county colors.	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 27

Level 1

Sam claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried.	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.
C. The review prompts use a bell icon.	**D.** A report says some language learners liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 28

Level 1

Avery claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result.	**B.** The actual result was measured in the group the proposal is meant to help.
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.	**D.** The orientation mats are black.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 29

Level 1

Taylor claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.
C. A matched group that did not use the plan was tracked so the result could be compared.	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 30

Level 1

Morgan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The report checked reader trust ratings, not just whether people said they liked the idea.	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result.
C. The correction box has a gray border.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 31

Level 1

Casey claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**D.** The stall price signs are laminated.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 32

Level 1

Jordan claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. The new buses were repainted blue.	**B.** The report tracked the claimed result both before the plan and after the plan.
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 34

Level 2

Sam claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The lockers are installed near the gym.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 35

Level 2

Avery claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result.
C. The text messages use a green pill icon.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 36

Level 2

Taylor claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A report says some software engineers liked the idea, but it does not check the claimed result.	**B.** The test calendar starts on a Monday.
C. Direct measurement tracks staff resignations instead of only asking whether the plan sounds good.	**D.** A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 37

Level 2

Morgan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The shelf labels use bold black numbers.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 38

Level 2

Casey claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.
C. The children's-book checkout desk moved six feet.	**D.** A report says some families checking out children's books liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 39

Level 2

Jordan claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue.	**B.** A report says some site administrators liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 40

Level 2

Riley claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 41

Level 2

Maya claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** The report focuses on course pass rates, which is the result named in the claim.
C. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**D.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 42

Level 2

Sam claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction.	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.
C. The lunch menus are printed on thicker paper.	**D.** A report says some lunch customers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 43

Level 2

Avery claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**B.** The warning texts arrive from a short code.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 44

Level 2

Taylor claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**B.** The digital passes include a small trail map.
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 45

Level 2

Morgan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan.	**B.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.
C. The Friday tickets are scanned at the east door.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 46

Level 2

Casey claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.	**B.** A careful check measured whether repeat head injuries changed, not merely whether people approved of the plan.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** The concussion checklist is printed on yellow paper.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 47

Level 2

Jordan claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** The receipt email subject line changed.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 48

Level 2

Riley claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**B.** The training room has a ceiling-mounted projector.
C. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 49

Level 2

Maya claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal.	**B.** A report says some apartment residents liked the idea, but it does not check the claimed result.
C. The lobby compost bins have foot pedals.	**D.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 50

Level 2

Sam claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The privacy screen uses a shield icon.	**B.** A no-plan group was measured too, making the result easier to interpret.
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**D.** A report says some new app users liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 51

Level 2

Avery claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. Because it is about patient no-show rates, the fact speaks to the exact result being claimed.	**D.** The appointment cards are white.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 52

Level 2

Taylor claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**B.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.
C. The gate signs are backlit.	**D.** A group like the target group tried the plan and saw the result improve in the same area.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 53

Level 2

Morgan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**B.** The repair portal uses a house logo.
C. A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.	**D.** Researchers measured the actual result before and after the plan was tried.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 54

Level 2

Casey claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A report says some middle-school students liked the idea, but it does not check the claimed result.	**B.** The fruit bowls are ceramic.
C. The actual result was measured in the group the proposal is meant to help.	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 55

Level 2

Jordan claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers.	**B.** A matched group that did not use the plan was tracked so the result could be compared.
C. A report says some support agents liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 56

Level 2

Riley claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The report checked average household water use, not just whether people said they liked the idea.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.
C. A report says some local homeowners liked the idea, but it does not check the claimed result.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 57

Level 2

Maya claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** The reminder tone is two beeps.
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 58

Level 2

Sam claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors.	**B.** A report says some mail voters liked the idea, but it does not check the claimed result.
C. The report tracked the claimed result both before the plan and after the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 59

Level 2

Avery claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result.	**B.** The report checks the claimed result among the people the plan is supposed to affect.
C. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.	**D.** The review prompts use a bell icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 60

Level 2

Taylor claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. Researchers included a similar group without the plan, giving the result a fair comparison.	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.
C. A report says some new gym members liked the idea, but it does not check the claimed result.	**D.** The orientation mats are black.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 61

Level 2

Morgan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.
C. A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.	**D.** Direct measurement tracks reported minor crashes instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 62

Level 2

Casey claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The correction box has a gray border.	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result.
C. Another group in a similar setting used the plan and the same result improved.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 63

Level 2

Jordan claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.
C. The stall price signs are laminated.	**D.** A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 64

Level 2

Riley claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**B.** Data come from the target group, not from a different group with different needs.
C. The quiet-hours text reminder uses a small moon icon.	**D.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

Sam claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Data come from the target group, not from a different group with different needs.	**B.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.
C. A report says some late-shift workers liked the idea, but it does not check the claimed result.	**D.** The new buses were repainted blue.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 66

Level 3

Avery claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym.	**B.** A comparison group was tracked at the same time, so the plan's result could be checked.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 67

Level 3

Taylor claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.
C. The report focuses on missed-dose reports, which is the result named in the claim.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 68

Level 3

Morgan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. The test calendar starts on a Monday.	**B.** A report says some software engineers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**D.** A comparable group tried the plan, and the result being checked moved in the right direction.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 69

Level 3

Casey claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** The shelf labels use bold black numbers.
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 70

Level 3

Jordan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.	**B.** Researchers looked at the result for the same people the proposal is meant to help.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** The children's-book checkout desk moved six feet.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 71

Level 3

Riley claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A report says some site administrators liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.
C. The report compares the target group with a similar group that did not use the plan.	**D.** The login button changed from green to blue.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 72

Level 3

Maya claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. The new light poles are made of aluminum.	**D.** A careful check measured whether reported thefts changed, not merely whether people approved of the plan.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 73

Level 3

Sam claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** The tutoring room has new chairs.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 74

Level 3

Avery claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.
C. The lunch menus are printed on thicker paper.	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 75

Level 3

Taylor claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A report says some checking-account customers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**D.** The report measures the claimed result in the group named in the proposal.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 76

Level 3

Morgan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map.	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result.
C. A no-plan group was measured too, making the result easier to interpret.	**D.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 77

Level 3

Casey claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** Because it is about family visits, the fact speaks to the exact result being claimed.
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 78

Level 3

Jordan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area.	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.
C. The concussion checklist is printed on yellow paper.	**D.** A report says some youth soccer players liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 79

Level 3

Riley claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A report says some first-time donors liked the idea, but it does not check the claimed result.	**B.** The receipt email subject line changed.
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 80

Level 3

Maya claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The training room has a ceiling-mounted projector.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 81

Level 3

Sam claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The lobby compost bins have foot pedals.	**B.** A matched group that did not use the plan was tracked so the result could be compared.
C. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**D.** A report says some apartment residents liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 82

Level 3

Avery claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The report checked publicly visible profiles, not just whether people said they liked the idea.	**B.** A report says some new app users liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 83

Level 3

Taylor claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A comparable group tried the plan and saw the tracked result improve under similar conditions.
C. A report says some primary-care patients liked the idea, but it does not check the claimed result.	**D.** The appointment cards are white.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 84

Level 3

Morgan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.
C. The gate signs are backlit.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 85

Level 3

Casey claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The repair portal uses a house logo.
C. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 86

Level 3

Jordan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic.	**B.** Researchers included a similar group without the plan, giving the result a fair comparison.
C. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 87

Level 3

Riley claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** A report says some support agents liked the idea, but it does not check the claimed result.
C. Direct measurement tracks customer complaint rates instead of only asking whether the plan sounds good.	**D.** The coaching slides use blue headers.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 88

Level 3

Maya claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A report says some local homeowners liked the idea, but it does not check the claimed result.	**B.** The water-leak alert screen includes a blue droplet icon.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** Another group in a similar setting used the plan and the same result improved.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 89

Level 3

Sam claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** A report says some patrol officers liked the idea, but it does not check the claimed result.
C. The reminder tone is two beeps.	**D.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 90

Level 3

Avery claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** Data come from the target group, not from a different group with different needs.
C. The ballot-tracking page uses county colors.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 91

Level 3

Taylor claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result.	**B.** The review prompts use a bell icon.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 92

Level 3

Morgan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result.	**B.** The orientation mats are black.
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.	**D.** The report focuses on new-member cancellations, which is the result named in the claim.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 93

Level 3

Casey claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction.	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.
C. The feedback dashboard uses star ratings.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 94

Level 3

Jordan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**B.** Before-and-after data compare the result from before the plan with the result after it began.
C. The correction box has a gray border.	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 95

Level 3

Riley claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**B.** The stall price signs are laminated.
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 96

Level 3

Maya claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The quiet-hours text reminder uses a small moon icon.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. The report compares the target group with a similar group that did not use the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

Avery claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**B.** The report compares the target group with a similar group that did not use the plan.
C. The new buses were repainted blue.	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 98

Level 4

Taylor claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A careful check measured whether classroom disruption reports changed, not merely whether people approved of the plan.	**B.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** The lockers are installed near the gym.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 99

Level 4

Morgan claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** The text messages use a green pill icon.
C. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**D.** A similar group used the plan under similar conditions and the tracked result improved.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 100

Level 4

Casey claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A report says some software engineers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 101

Level 4

Jordan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**B.** Researchers looked at the result for the same people the proposal is meant to help.
C. The shelf labels use bold black numbers.	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 102

Level 4

Riley claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some families checking out children's books liked the idea, but it does not check the claimed result.
C. The children's-book checkout desk moved six feet.	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 103

Level 4

Maya claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**B.** The login button changed from green to blue.
C. A report says some site administrators liked the idea, but it does not check the claimed result.	**D.** Because it is about admin account takeovers, the fact speaks to the exact result being claimed.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 104

Level 4

Sam claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. A group like the target group tried the plan and saw the result improve in the same area.	**D.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 105

Level 4

Avery claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.
C. A report says some first-year statistics students liked the idea, but it does not check the claimed result.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 106

Level 4

Taylor claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result.
C. The report measures the claimed result in the group named in the proposal.	**D.** The lunch menus are printed on thicker paper.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 107

Level 4

Morgan claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.
C. A matched group that did not use the plan was tracked so the result could be compared.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 108

Level 4

Casey claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**B.** The digital passes include a small trail map.
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**D.** The report checked trail crowding complaints, not just whether people said they liked the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 109

Level 4

Jordan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some local families liked the idea, but it does not check the claimed result.
C. The Friday tickets are scanned at the east door.	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 110

Level 4

Riley claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The concussion checklist is printed on yellow paper.	**B.** Researchers measured the actual result before and after the plan was tried.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 111

Level 4

Maya claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** The receipt email subject line changed.
C. The actual result was measured in the group the proposal is meant to help.	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 112

Level 4

Sam claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**B.** The training room has a ceiling-mounted projector.
C. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 113

Level 4

Avery claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. Direct measurement tracks landfill waste from participating buildings instead of only asking whether the plan sounds good.	**B.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 114

Level 4

Taylor claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 115

Level 4

Morgan claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** The appointment cards are white.
C. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**D.** A report says some primary-care patients liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 116

Level 4

Casey claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit.	**B.** The report checks the claimed result among the people the plan is supposed to affect.
C. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 117

Level 4

Jordan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.
C. The repair portal uses a house logo.	**D.** A comparison group was tracked at the same time, so the plan's result could be checked.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 118

Level 4

Riley claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result.
C. The report focuses on fruit purchases, which is the result named in the claim.	**D.** The fruit bowls are ceramic.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 119

Level 4

Maya claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. The coaching slides use blue headers.	**D.** A report says some support agents liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 120

Level 4

Sam claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 121

Level 4

Avery claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.
C. The reminder tone is two beeps.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 122

Level 4

Taylor claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors.	**B.** A report says some mail voters liked the idea, but it does not check the claimed result.
C. The report compares the target group with a similar group that did not use the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 123

Level 4

Morgan claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.	**B.** A careful check measured whether vocabulary retention quiz scores changed, not merely whether people approved of the plan.
C. A report says some language learners liked the idea, but it does not check the claimed result.	**D.** The review prompts use a bell icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 124

Level 4

Casey claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A similar group used the plan under similar conditions and the tracked result improved.	**B.** A report says some new gym members liked the idea, but it does not check the claimed result.
C. The orientation mats are black.	**D.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 125

Level 4

Jordan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.
C. The feedback dashboard uses star ratings.	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 126

Level 4

Riley claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**B.** The correction box has a gray border.
C. Researchers looked at the result for the same people the proposal is meant to help.	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 127

Level 4

Maya claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**D.** The stall price signs are laminated.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 128

Level 4

Sam claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A report says some overnight hotel guests liked the idea, but it does not check the claimed result.	**B.** Because it is about noise complaints from guest rooms, the fact speaks to the exact result being claimed.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

Taylor claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Because it is about late-shift commute complaints, the fact speaks to the exact result being claimed.	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result.
C. The new buses were repainted blue.	**D.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 130

Level 5

Morgan claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym.	**B.** A group like the target group tried the plan and saw the result improve in the same area.
C. A report says some ninth-grade students liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 131

Level 5

Casey claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.
C. The report measures whether the result actually changed after the plan was used.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 132

Level 5

Jordan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A report says some software engineers liked the idea, but it does not check the claimed result.	**D.** The report measures the claimed result in the group named in the proposal.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 133

Level 5

Riley claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.
C. The shelf labels use bold black numbers.	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 134

Level 5

Maya claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.	**B.** The report checked library card renewals, not just whether people said they liked the idea.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** The children's-book checkout desk moved six feet.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 135

Level 5

Sam claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**B.** The login button changed from green to blue.
C. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**D.** A report says some site administrators liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 136

Level 5

Avery claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**B.** The new light poles are made of aluminum.
C. A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.	**D.** Researchers measured the actual result before and after the plan was tried.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 137

Level 5

Taylor claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The tutoring room has new chairs.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 138

Level 5

Morgan claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result.	**B.** The lunch menus are printed on thicker paper.
C. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**D.** A matched group that did not use the plan was tracked so the result could be compared.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 139

Level 5

Casey claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.
C. A report says some checking-account customers liked the idea, but it does not check the claimed result.	**D.** Direct measurement tracks overdraft fees instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 140

Level 5

Jordan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.
C. Another group in a similar setting used the plan and the same result improved.	**D.** The digital passes include a small trail map.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 141

Level 5

Riley claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** The report tracked the claimed result both before the plan and after the plan.
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 142

Level 5

Maya claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The concussion checklist is printed on yellow paper.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 143

Level 5

Sam claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result.
C. The receipt email subject line changed.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 144

Level 5

Avery claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. The training room has a ceiling-mounted projector.	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result.
C. The report focuses on back-injury claims, which is the result named in the claim.	**D.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 145

Level 5

Taylor claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 146

Level 5

Morgan claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 147

Level 5

Casey claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. The appointment cards are white.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 148

Level 5

Jordan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 149

Level 5

Riley claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A careful check measured whether unresolved repair requests changed, not merely whether people approved of the plan.	**B.** The repair portal uses a house logo.
C. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 150

Level 5

Maya claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**B.** A similar group used the plan under similar conditions and the tracked result improved.
C. The fruit bowls are ceramic.	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 151

Level 5

Sam claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers.	**B.** A report says some support agents liked the idea, but it does not check the claimed result.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 152

Level 5

Avery claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. The water-leak alert screen includes a blue droplet icon.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 153

Level 5

Taylor claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan.	**B.** The reminder tone is two beeps.
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.	**D.** A report says some patrol officers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 154

Level 5

Morgan claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** Because it is about phone calls asking ballot status, the fact speaks to the exact result being claimed.
C. The ballot-tracking page uses county colors.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 155

Level 5

Casey claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. The review prompts use a bell icon.	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.
C. A group like the target group tried the plan and saw the result improve in the same area.	**D.** A report says some language learners liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 156

Level 5

Jordan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. The orientation mats are black.	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.
C. A report says some new gym members liked the idea, but it does not check the claimed result.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 157

Level 5

Riley claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal.	**B.** The feedback dashboard uses star ratings.
C. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 158

Level 5

Maya claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A report says some newsletter readers liked the idea, but it does not check the claimed result.	**B.** A no-plan group was measured too, making the result easier to interpret.
C. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**D.** The correction box has a gray border.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 159

Level 5

Sam claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**B.** The report checked price disputes, not just whether people said they liked the idea.
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**D.** The stall price signs are laminated.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 160

Level 5

Avery claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.
