Skill 07

Check Source Reliability

Can We Trust the Source?

160 Items	**1-5** Levels	**Judge a source using expertise, motives, method, and openness.** Objective

Essential question. How much trust should we place in this source, and why?

This PDF is designed for classroom use. It gives teachers a rigorous introduction to the skill, a repeatable solving routine, likely student confusions, a worked example, and the full XiXteen item set with choice-level feedback.

Generated from the current XiXteen corpus on 2026-10-29.

Skill 07

Check Source Reliability

Can We Trust the Source?

Judge a source using expertise, motives, method, and openness. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How much trust should we place in this source, and why?
Why it matters	A source can be wrong because it lacks expertise, hides its method, samples badly, or has strong pressure to reach a certain answer. Source checks do not replace evidence checks; they tell us how carefully to treat the evidence.
Conceptual core	Source reliability is not a vibe check. It is a structured judgment about expertise, method, independence, transparency, and track record. Students should learn that a source with a possible interest is not automatically wrong, and a source without an obvious interest is not automatically right. The question is how the source's position affects the weight we should give its claim.
Student method	Ask four questions: Does the source know the topic? Does it show the method? Does it have a reason to tilt the result? Does it include inconvenient information?
Analogy	A source is like a witness. You ask what they saw, how close they were, what they know, and whether they have a reason to shade the story.
Assessment focus	A good answer names the reliability issue precisely: expertise, method, sampling, independence, transparency, or track record.

Teaching Sequence

1. Ask whether the source has relevant knowledge or access.

2. Look for a clear method, sample, and data path.

3. Check whether the source has pressure, incentives, or commitments that could slant judgment.

4. Value sources that show limitations or inconvenient evidence.

Common Confusions To Watch For

1. Students may treat motive as proof of falsehood rather than a reason for caution.

2. Students may trust impressive titles even when the topic is outside the person's expertise.

3. Students may ignore missing methods because the conclusion sounds reasonable.

Teacher Prompts

1. What does this source know, and how would it know?

2. What method is visible?

3. What reason might this source have to leave something out?

Worked Example

Scenario	A company claims its study shows its app improves sleep, but the report does not say how users were selected or how sleep was measured.
Teacher think-aloud	The problem is not just that the company benefits. The missing method makes the claim hard to check, and the source's incentive gives us another reason to ask for transparency.
Student takeaway	Reliability grows when expertise, method, and openness are visible.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. An app seller says its product improves sleep, citing 12 testimonials with no recruitment details or sleep measure. A university team studies the same app: 200 adults are randomly assigned to app or no-app groups, sleep is measured identically, and the complete results and funding are disclosed. No result figures are supplied here; you are judging how checkable the sources are.

What To Do

1. Make a two-row chart, one row per source, with columns for participant selection, measurement, comparison group, and disclosed interests.

2. Write 'not supplied' wherever the scenario lacks a detail; do not invent it.

3. Write two sentences identifying which report is easier to check and why a seller's financial interest is a reason for scrutiny rather than automatic disproof.

Check before reading the answer. Did you compare reporting methods rather than trust the university's name or reject the seller's identity alone?

Model Answer

Seller: selection not supplied; sleep measure not supplied; no comparison group described; sells the app. University: recruitment details not supplied, but random group assignment stated; common sleep measure; app/no-app comparison; funding disclosed. The university report is easier to inspect because it describes methods and a comparison. The seller has an incentive to promote the product, but that incentive alone does not prove its claim false.

Why it is adequate. It distinguishes known details from missing ones and treats incentives and methods as evidence to examine, not shortcuts to a verdict.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

Riley reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The author is a transportation expert who has studied similar programs.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 2

Level 1

Maya reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report does not say how the data was gathered.
C. The author is an education expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 3

Level 1

Sam reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Sam trust the report less?

A. The author has no relevant expertise and cites no one who does.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a health expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 4

Level 1

Avery reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Avery trust the report less?

A. The author is a workplace expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report leaves out results that went against its conclusion.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 5

Level 1

Taylor reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The author is a retail expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 6

Level 1

Morgan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author works for a firm bidding to run part of the plan.
C. The author is a public services expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 7

Level 1

Casey reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Casey trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 8

Level 1

Jordan reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Jordan trust the report less?

A. The author is a public safety expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 9

Level 1

Riley reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Riley trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author reports only the best month and skips weaker months.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 10

Level 1

Maya reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The survey came from a signup list for fans of the proposal.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 11

Level 1

Sam reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a finance expert who has studied similar programs.	**D.** The report was sponsored by a supplier that could be hired if the plan passed.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 12

Level 1

Avery reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Avery trust the report less?

A. The report never explains who was surveyed or how they were chosen.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an environment expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 13

Level 1

Taylor reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report is written by a publicity intern with no background in the field.
C. The author is a culture expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 14

Level 1

Morgan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a sports expert who has studied similar programs.
C. The report mentions successes but leaves out failed trials of the same plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 15

Level 1

Casey reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The author is a nonprofit expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 16

Level 1

Jordan reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Jordan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a workplace safety expert who has studied similar programs.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 17

Level 1

Riley reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The methods section is missing, so readers cannot check the process.
C. The author is an environment expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 18

Level 1

Maya reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Maya trust the report less?

A. The author is a technology expert who has studied similar programs.	**B.** The report names who collected the data.
C. No expert source is named, even though the report makes technical claims.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 19

Level 1

Sam reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Sam trust the report less?

A. The author is a health expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 20

Level 1

Avery reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Avery trust the report less?

A. The sample was drawn from a meeting organized by supporters of the plan.	**B.** The report names who collected the data.
C. The author is a travel expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 21

Level 1

Taylor reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Taylor trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The publisher sells products connected to the recommendation.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 22

Level 1

Morgan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report gives a conclusion but no way to inspect the raw data.
C. The author is a food expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 23

Level 1

Casey reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Casey trust the report less?

A. The author gives no qualifications for judging this kind of plan.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a customer support expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 24

Level 1

Jordan reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Jordan trust the report less?

A. The author is an utilities expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 25

Level 1

Riley reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Riley trust the report less?

A. The author is a governance expert who has studied similar programs.	**B.** The report names who collected the data.
C. Only people who had already benefited from the plan were surveyed.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 26

Level 1

Maya reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The report comes from a group seeking the contract created by the plan.
C. The author is an election administration expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 27

Level 1

Sam reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Sam trust the report less?

A. The report does not say how the data was gathered.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a learning expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 28

Level 1

Avery reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Avery trust the report less?

A. The author is a fitness expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author has no relevant expertise and cites no one who does.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 29

Level 1

Taylor reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report leaves out results that went against its conclusion.	**D.** The author is an insurance expert who has studied similar programs.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 30

Level 1

Morgan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The survey only included people who already supported the plan.
C. The report names who collected the data.	**D.** The author is a media expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 31

Level 1

Casey reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a local commerce expert who has studied similar programs.
C. The report names who collected the data.	**D.** A company that sells services tied to the recommendation helped write the report.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 32

Level 1

Jordan reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Jordan trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The author is a hospitality expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a transportation expert who has studied similar programs.
C. The report gives results but no sample size, dates, or data source.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 34

Level 2

Sam reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 35

Level 2

Avery reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Avery trust the report less?

A. The author reports only the best month and skips weaker months.	**B.** The author is a health expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 36

Level 2

Taylor reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The survey came from a signup list for fans of the proposal.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a workplace expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 37

Level 2

Morgan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. The author works for a firm bidding to run part of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 38

Level 2

Casey reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a public services expert who has studied similar programs.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 39

Level 2

Jordan reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Jordan trust the report less?

A. The report is written by a publicity intern with no background in the field.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 40

Level 2

Riley reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Riley trust the report less?

A. The author is a public safety expert who has studied similar programs.	**B.** The report mentions successes but leaves out failed trials of the same plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 41

Level 2

Maya reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Maya trust the report less?

A. People who disliked the plan were not invited to answer the survey.	**B.** The author is an education expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 42

Level 2

Sam reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report was sponsored by a supplier that could be hired if the plan passed.
C. The report names who collected the data.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 43

Level 2

Avery reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Avery trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The methods section is missing, so readers cannot check the process.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 44

Level 2

Taylor reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** No expert source is named, even though the report makes technical claims.
C. The author is an environment expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 45

Level 2

Morgan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a culture expert who has studied similar programs.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 46

Level 2

Casey reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a sports expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 47

Level 2

Jordan reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Jordan trust the report less?

A. The report names who collected the data.	**B.** A consultant who helped design the plan was paid to evaluate it.
C. The author is a nonprofit expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 48

Level 2

Riley reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data.	**B.** The report names who collected the data.
C. The author is a workplace safety expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 49

Level 2

Maya reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The author gives no qualifications for judging this kind of plan.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 50

Level 2

Sam reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Sam trust the report less?

A. The author is a technology expert who has studied similar programs.	**B.** The report names who collected the data.
C. The chart starts after the worst results had already happened.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 51

Level 2

Avery reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Avery trust the report less?

A. The author is a health expert who has studied similar programs.	**B.** Only people who had already benefited from the plan were surveyed.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 52

Level 2

Taylor reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a travel expert who has studied similar programs.	**D.** The publisher sells products connected to the recommendation.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 53

Level 2

Morgan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Morgan trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 54

Level 2

Casey reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Casey trust the report less?

A. The author has no relevant expertise and cites no one who does.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a food expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 55

Level 2

Jordan reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Jordan trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report names who collected the data.
C. The author is a customer support expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 56

Level 2

Riley reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The survey only included people who already supported the plan.
C. The report names who collected the data.	**D.** The author is an utilities expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 57

Level 2

Maya reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Maya trust the report less?

A. The report comes from a group seeking the contract created by the plan.	**B.** The report names who collected the data.
C. The author is a governance expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 58

Level 2

Sam reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report gives results but no sample size, dates, or data source.
C. The author is an election administration expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 59

Level 2

Avery reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Avery trust the report less?

A. The author is a learning expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author works outside the topic area and does not quote experts.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 60

Level 2

Taylor reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a fitness expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author reports only the best month and skips weaker months.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 61

Level 2

Morgan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Morgan trust the report less?

A. The survey came from a signup list for fans of the proposal.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an insurance expert who has studied similar programs.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 62

Level 2

Casey reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a media expert who has studied similar programs.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 63

Level 2

Jordan reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Jordan trust the report less?

A. The report names who collected the data.	**B.** The author is a local commerce expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 64

Level 2

Riley reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a hospitality expert who has studied similar programs.
C. The report is written by a publicity intern with no background in the field.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

Sam reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Sam trust the report less?

A. The author is a transportation expert who has studied similar programs.	**B.** The report is written by a publicity intern with no background in the field.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 66

Level 3

Avery reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Avery trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 67

Level 3

Taylor reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a health expert who has studied similar programs.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 68

Level 3

Morgan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Morgan trust the report less?

A. The author is a workplace expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report was sponsored by a supplier that could be hired if the plan passed.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 69

Level 3

Casey reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Casey trust the report less?

A. The author is a retail expert who has studied similar programs.	**B.** The report never explains who was surveyed or how they were chosen.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 70

Level 3

Jordan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Jordan trust the report less?

A. No expert source is named, even though the report makes technical claims.	**B.** The author is a public services expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 71

Level 3

Riley reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a technology expert who has studied similar programs.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 72

Level 3

Maya reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a public safety expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 73

Level 3

Sam reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Sam trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** A consultant who helped design the plan was paid to evaluate it.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 74

Level 3

Avery reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Avery trust the report less?

A. The methods section is missing, so readers cannot check the process.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 75

Level 3

Taylor reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Taylor trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author gives no qualifications for judging this kind of plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 76

Level 3

Morgan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is an environment expert who has studied similar programs.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 77

Level 3

Casey reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Casey trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The author is a culture expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 78

Level 3

Jordan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The publisher sells products connected to the recommendation.
C. The author is a sports expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 79

Level 3

Riley reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data.	**B.** The author is a nonprofit expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 80

Level 3

Maya reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The author is a workplace safety expert who has studied similar programs.
C. The author has no relevant expertise and cites no one who does.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 81

Level 3

Sam reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Sam trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is an environment expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 82

Level 3

Avery reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The author is a technology expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 83

Level 3

Taylor reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Taylor trust the report less?

A. The report comes from a group seeking the contract created by the plan.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a health expert who has studied similar programs.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 84

Level 3

Morgan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a travel expert who has studied similar programs.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 85

Level 3

Casey reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Casey trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 86

Level 3

Jordan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author reports only the best month and skips weaker months.
C. The report names who collected the data.	**D.** The author is a food expert who has studied similar programs.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 87

Level 3

Riley reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Riley trust the report less?

A. The author is a customer support expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The survey came from a signup list for fans of the proposal.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 88

Level 3

Maya reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The author is an utilities expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 89

Level 3

Sam reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Sam trust the report less?

A. The author is a governance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report gives results but no sample size, dates, or data source.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 90

Level 3

Avery reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Avery trust the report less?

A. The report names who collected the data.	**B.** The report is written by a publicity intern with no background in the field.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an election administration expert who has studied similar programs.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 91

Level 3

Taylor reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Taylor trust the report less?

A. The author is a learning expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report mentions successes but leaves out failed trials of the same plan.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 92

Level 3

Morgan reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** People who disliked the plan were not invited to answer the survey.
C. The author is a fitness expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 93

Level 3

Casey reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author works for a firm bidding to run part of the plan.
C. The report names who collected the data.	**D.** The author is an insurance expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 94

Level 3

Jordan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Jordan trust the report less?

A. The report never explains who was surveyed or how they were chosen.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a media expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 95

Level 3

Riley reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The author is a local commerce expert who has studied similar programs.
C. No expert source is named, even though the report makes technical claims.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 96

Level 3

Maya reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Maya trust the report less?

A. The author is a hospitality expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

Avery reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. Several negative results were collected but not included in the summary.	**D.** The author is a transportation expert who has studied similar programs.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 98

Level 4

Taylor reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The sample was drawn from a meeting organized by supporters of the plan.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 99

Level 4

Morgan reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Morgan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it.	**B.** The author is a health expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 100

Level 4

Casey reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The methods section is missing, so readers cannot check the process.
C. The report names who collected the data.	**D.** The author is a workplace expert who has studied similar programs.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 101

Level 4

Jordan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. No expert source is named, even though the report makes technical claims.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 102

Level 4

Riley reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a public services expert who has studied similar programs.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 103

Level 4

Maya reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Maya trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 104

Level 4

Sam reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The publisher sells products connected to the recommendation.
C. The author is a public safety expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 105

Level 4

Avery reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Avery trust the report less?

A. The report names who collected the data.	**B.** The author is an education expert who has studied similar programs.
C. The report gives a conclusion but no way to inspect the raw data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 106

Level 4

Taylor reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a nutrition expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author gives no qualifications for judging this kind of plan.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 107

Level 4

Morgan reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Morgan trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report leaves out results that went against its conclusion.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 108

Level 4

Casey reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Casey trust the report less?

A. The survey only included people who already supported the plan.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 109

Level 4

Jordan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Jordan trust the report less?

A. The author is a culture expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report comes from a group seeking the contract created by the plan.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 110

Level 4

Riley reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Riley trust the report less?

A. The author is a sports expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 111

Level 4

Maya reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Maya trust the report less?

A. The author is a nonprofit expert who has studied similar programs.	**B.** The author has no relevant expertise and cites no one who does.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 112

Level 4

Sam reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Sam trust the report less?

A. The author reports only the best month and skips weaker months.	**B.** The author is a workplace safety expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 113

Level 4

Avery reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is an environment expert who has studied similar programs.	**D.** The survey came from a signup list for fans of the proposal.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 114

Level 4

Taylor reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The author is a technology expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 115

Level 4

Morgan reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a health expert who has studied similar programs.	**D.** The report gives results but no sample size, dates, or data source.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 116

Level 4

Casey reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Casey trust the report less?

A. The author is a travel expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author works outside the topic area and does not quote experts.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 117

Level 4

Jordan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Jordan trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan.	**B.** The report names who collected the data.
C. The author is a housing expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 118

Level 4

Riley reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** People who disliked the plan were not invited to answer the survey.
C. The author is a food expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 119

Level 4

Maya reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author works for a firm bidding to run part of the plan.	**D.** The author is a customer support expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 120

Level 4

Sam reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an utilities expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 121

Level 4

Avery reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Avery trust the report less?

A. The report is written by a publicity intern with no background in the field.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a governance expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 122

Level 4

Taylor reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Taylor trust the report less?

A. The author is an election administration expert who has studied similar programs.	**B.** Several negative results were collected but not included in the summary.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 123

Level 4

Morgan reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a learning expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 124

Level 4

Casey reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a fitness expert who has studied similar programs.	**D.** The report was sponsored by a supplier that could be hired if the plan passed.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 125

Level 4

Jordan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Jordan trust the report less?

A. The methods section is missing, so readers cannot check the process.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an insurance expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 126

Level 4

Riley reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** No expert source is named, even though the report makes technical claims.
C. The author is a media expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 127

Level 4

Maya reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The chart starts after the worst results had already happened.
C. The author is a local commerce expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 128

Level 4

Sam reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Sam trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a hospitality expert who has studied similar programs.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

Taylor reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a transportation expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** Only people who had already benefited from the plan were surveyed.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 130

Level 5

Morgan reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Morgan trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** The report names who collected the data.
C. The publisher sells products connected to the recommendation.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 131

Level 5

Casey reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report gives a conclusion but no way to inspect the raw data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a health expert who has studied similar programs.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 132

Level 5

Jordan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Jordan trust the report less?

A. The author gives no qualifications for judging this kind of plan.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a workplace expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 133

Level 5

Riley reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. The report names who collected the data.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 134

Level 5

Maya reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Maya trust the report less?

A. The author is a public services expert who has studied similar programs.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 135

Level 5

Sam reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The report comes from a group seeking the contract created by the plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a technology expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 136

Level 5

Avery reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Avery trust the report less?

A. The report does not say how the data was gathered.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a public safety expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 137

Level 5

Taylor reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author has no relevant expertise and cites no one who does.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an education expert who has studied similar programs.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 138

Level 5

Morgan reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Morgan trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a nutrition expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 139

Level 5

Casey reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The survey came from a signup list for fans of the proposal.	**D.** The author is a finance expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 140

Level 5

Jordan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Jordan trust the report less?

A. The author is an environment expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** A company that sells services tied to the recommendation helped write the report.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 141

Level 5

Riley reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Riley trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The author is a culture expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 142

Level 5

Maya reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The author works outside the topic area and does not quote experts.
C. The author is a sports expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 143

Level 5

Sam reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Sam trust the report less?

A. The author is a nonprofit expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author reports only the best month and skips weaker months.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 144

Level 5

Avery reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Avery trust the report less?

A. The author is a workplace safety expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 145

Level 5

Taylor reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Taylor trust the report less?

A. The author works for a firm bidding to run part of the plan.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 146

Level 5

Morgan reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report never explains who was surveyed or how they were chosen.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 147

Level 5

Casey reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report is written by a publicity intern with no background in the field.	**D.** The author is a health expert who has studied similar programs.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 148

Level 5

Jordan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a travel expert who has studied similar programs.	**D.** The report mentions successes but leaves out failed trials of the same plan.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 149

Level 5

Riley reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Riley trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The sample was drawn from a meeting organized by supporters of the plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 150

Level 5

Maya reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Maya trust the report less?

A. The report was sponsored by a supplier that could be hired if the plan passed.	**B.** The author is a food expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 151

Level 5

Sam reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Sam trust the report less?
