

XiXteen

A comprehensive critical thinking curriculum built from 16 skills and objective quiz items.

16 Skills	**2,560** Items	**5** Levels per skill	**160** Items per skill

This curriculum turns the XiXteen item bank into a teachable sequence. Each chapter introduces one critical thinking skill, explains why it matters, gives a solving method, and then presents the full item set with answer feedback and teaching commentary.

Generated from the current XiXteen corpus on 2026-10-29.

How To Use This Curriculum

XiXteen is organized around daily practice: one objective item from each of 16 critical thinking skills. This PDF expands that structure into a curriculum reference for learners, teachers, tutors, debate coaches, and anyone who wants to build a steadier habit of judgment.

Each chapter begins with a rigorous skill introduction and then lists items by difficulty. The feedback is intentionally choice-level: students should learn not only why the right answer is right, but why each tempting alternative is weaker.

Teaching Routine

1. Read the prompt slowly and name the target skill before looking at the choices.

2. Predict the kind of answer the skill calls for: claim, definition, conclusion, assumption, relevance, evidence, source warning, logical gap, fallacy, probability move, statistic, causal caution, alternative explanation, bias, tradeoff, or belief update.

3. Choose an answer, then read every feedback note. The distractor feedback is where much of the learning happens.

4. Use the process commentary to reconstruct the path from prompt to answer.

Curriculum Map

01 What's the Claim? Clarify the Claim Find the exact claim being made.	**09 What's the Fallacy?** Recognize Common Fallacies Match a bad argument to its mistake.
02 What Do the Words Mean? Define Key Terms Find the word or phrase that needs a clearer meaning.	**10 How Likely Is It?** Think Probabilistically Choose the answer that handles chance and uncertainty well.
03 What's the Argument? Find the Argument Find the conclusion, reason, evidence, example, or side comment.	**11 What Do the Numbers Say?** Use Statistical Sense Read numbers with the right context.
04 What's Assumed? Spot Hidden Assumptions Find the unstated idea the argument needs.	**12 Cause or Coincidence?** Separate Correlation and Causation Explain why a cause claim is not proven yet.
05 Does That Matter? Test Relevance Decide whether a fact actually matters for the claim.	**13 What Else Could Explain It?** Consider Alternative Explanations Pick another explanation that also fits the facts.
06 How Good Is the Evidence? Evaluate Evidence Quality Pick the strongest evidence from the details given.	**14 What Bias Is Showing?** Recognize Cognitive Biases Name the thinking bias shown in a choice.
07 Can We Trust the Source? Check Source Reliability Judge a source using expertise, motives, method, and openness.	**15 What Are the Tradeoffs?** Weigh Tradeoffs and Consequences Find the clearest cost, benefit, risk, or second effect.
08 Does the Logic Follow? Detect Logical Gaps Find the step that does not follow.	**16 How Should Belief Change?** Update Beliefs Responsibly Change confidence by the right amount.

Skill 01

Clarify the Claim

What's the Claim?

Find the exact claim being made. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What exactly is the speaker asking us to accept?
Why it matters	Every argument is easier to judge once you know exactly what someone is asking you to accept. Without this skill, people waste time attacking side details, stories, or evidence while the real point quietly escapes inspection.
Conceptual core	This skill trains students to locate the target of judgment before judging it. A prompt may include background, measurements, motives, vivid details, and a speaker's conclusion. The claim is the statement that would need support after the background has been cleared away. Students should learn that claims can be descriptive, predictive, causal, evaluative, or practical recommendations, and that each type requires different later tests.
Student method	Look for the sentence that would still need support if all the background details were removed. Separate the recommendation from the reason, the measured result, the audience, and any claim that goes beyond what the speaker actually said.
Analogy	Think of a claim as the destination on a map. Evidence is the road, scenery is background, and exaggerations are roads to somewhere else.
Assessment focus	A good answer names the exact point being supported and rejects answers that are merely supporting facts, side details, or overclaims.

Teaching Sequence

1. Find the speaker and mark the sentence that sounds like the point of the argument.

2. Separate the claim from the evidence that is offered for it.

3. Check whether an answer overstates the claim by adding always, only, proven, everyone, or everywhere.

4. Restate the claim in plain language before choosing an answer.

Common Confusions To Watch For

1. Students often pick the most concrete fact because it feels important, even when it is only evidence.

2. Students may pick an extreme version of the claim because it sounds more decisive than the actual conclusion.

3. Students sometimes confuse the issue being discussed with the position someone takes on that issue.

Teacher Prompts

1. Who is trying to persuade whom?

2. Which sentence would the speaker need to defend if challenged?

3. Which choices are evidence, background, or exaggeration rather than the claim?

Worked Example

Scenario	A city tests later library hours and visits rise from 400 to 460 per week. A council member says, because of that test, the city should keep the later hours.
Teacher think-aloud	The visit count is evidence. The issue is library hours. The council member's claim is the recommendation to keep later hours. A choice saying the test proves later hours always work would go beyond the claim.
Student takeaway	The main claim is the point being defended, not the measurement used to defend it.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A student writes: 'Our library closes at 5 p.m. During a four-week trial of closing at 7 p.m., weekly visits rose from 400 to 460. The council should keep the later closing time.'

What To Do

1. Copy the main claim: the proposal the writer wants the council to accept.

2. Copy the supporting evidence and label the remaining sentence as background.

3. Write one sentence explaining why the visit count is not itself the main claim.

Check before reading the answer. Have you separated the proposed action from the fact used to support it? Do not add 'always' or claim that the trial proves the policy works everywhere.

Model Answer

Claim: the council should keep the later closing time. Evidence: weekly visits rose from 400 to 460 during the trial. Background: the library normally closes at 5 p.m. The count supports the proposal; it is not the proposed action.

Why it is adequate. The answer names the roles of all three sentences without strengthening what the writer said.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Riley asking people to accept?

A. The city council should extend evening bus service until midnight.	**B.** The city council has proven the idea will work everywhere without needing more evidence.
C. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**D.** The new buses were repainted blue.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 2

Level 1

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Maya asking people to accept?

A. The school board has proven the idea will work everywhere without needing more evidence.	**B.** Ninth-grade students are the only ones affected, so no other concern matters.
C. The school board should require phone lockers during class.	**D.** The lockers are installed near the gym.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The school board should require phone lockers during class. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 3

Level 1

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Sam asking people to accept?

A. The hospital should send medication reminder texts before evening doses.	**B.** A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.
C. The text messages use a green pill icon.	**D.** The hospital has proven the idea will work everywhere without needing more evidence.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 4

Level 1

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Avery asking people to accept?

A. The test calendar starts on a Monday.	**B.** The company has proven the idea will work everywhere without needing more evidence.
C. The company should test a Monday-through-Thursday workweek.	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 5

Level 1

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Taylor asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence.	**B.** The grocery chain should add larger unit-price labels on shelf tags.
C. Weekly grocery shoppers are the only ones affected, so no other concern matters.	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 6

Level 1

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Morgan asking people to accept?

A. The library has proven the idea will work everywhere without needing more evidence.	**B.** Families checking out children's books are the only ones affected, so no other concern matters.
C. The library should waive late fines for children's books.	**D.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The library should waive late fines for children's books. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 7

Level 1

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Casey asking people to accept?

A. The login button changed from green to blue.	**B.** The platform has proven the idea will work everywhere without needing more evidence.
C. The platform should require two-factor login for site administrators.	**D.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.

Answer: C. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 8

Level 1

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Jordan asking people to accept?

A. The neighborhood association should add brighter LED streetlights on Maple Street.	**B.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.
C. Residents on Maple Street are the only ones affected, so no other concern matters.	**D.** The neighborhood association has proven the idea will work everywhere without needing more evidence.

Answer: A. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 9

Level 1

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Riley asking people to accept?

A. The university has proven the idea will work everywhere without needing more evidence.	**B.** The tutoring room has new chairs.
C. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.	**D.** The university should expand peer tutoring in statistics.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 10

Level 1

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Maya asking people to accept?

A. The restaurant group should show calorie labels on printed lunch menus.	**B.** The lunch menus are printed on thicker paper.
C. The restaurant group has proven the idea will work everywhere without needing more evidence.	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.

Answer: A. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 11

Level 1

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Sam asking people to accept?

A. The bank should send overdraft warning texts before fees post.	**B.** The warning texts arrive from a short code.
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**D.** Checking-account customers are the only ones affected, so no other concern matters.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 12

Level 1

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Avery asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.
C. The digital passes include a small trail map.	**D.** The park service should use timed-entry passes for weekend trail visits.

Answer: D. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 13

Level 1

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Taylor asking people to accept?

A. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.	**B.** Local families are the only ones affected, so no other concern matters.
C. The museum should offer free admission on Fridays.	**D.** The museum has proven the idea will work everywhere without needing more evidence.

Answer: C. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The museum should offer free admission on Fridays. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 14

Level 1

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Morgan asking people to accept?

A. The concussion checklist is printed on yellow paper.	**B.** The sports league should add mandatory sideline concussion checks.
C. The sports league has proven the idea will work everywhere without needing more evidence.	**D.** Youth soccer players are the only ones affected, so no other concern matters.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 15

Level 1

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Casey asking people to accept?

A. The receipt email subject line changed.	**B.** The nonprofit should send donation receipts within one day.
C. First-time donors are the only ones affected, so no other concern matters.	**D.** The nonprofit has proven the idea will work everywhere without needing more evidence.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 16

Level 1

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Jordan asking people to accept?

A. The training room has a ceiling-mounted projector.	**B.** Warehouse staff are the only ones affected, so no other concern matters.
C. The warehouse has proven the idea will work everywhere without needing more evidence.	**D.** The warehouse should offer monthly lifting-safety and ergonomic training.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 17

Level 1

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Riley asking people to accept?

A. The lobby compost bins have foot pedals.	**B.** The city sanitation office should place compost bins in apartment lobbies.
C. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.	**D.** Apartment residents are the only ones affected, so no other concern matters.

Answer: B. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 18

Level 1

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Maya asking people to accept?

A. New app users are the only ones affected, so no other concern matters.	**B.** The privacy screen uses a shield icon.
C. The app maker has proven the idea will work everywhere without needing more evidence.	**D.** The app maker should make new user profiles private by default.

Answer: D. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The app maker should make new user profiles private by default. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 19

Level 1

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Sam asking people to accept?

A. The appointment cards are white.	**B.** The clinic has proven the idea will work everywhere without needing more evidence.
C. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**D.** The clinic should reserve same-day appointment slots.

Answer: D. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 20

Level 1

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Avery asking people to accept?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.	**B.** The airline should board passengers by seat zone.
C. The gate signs are backlit.	**D.** Domestic flight passengers are the only ones affected, so no other concern matters.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The airline should board passengers by seat zone. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 21

Level 1

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Taylor asking people to accept?

A. The landlord has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.
C. The repair portal uses a house logo.	**D.** The landlord should launch an online apartment repair portal.

Answer: D. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 22

Level 1

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Morgan asking people to accept?

A. The cafeteria should move fruit bowls to the front of the cafeteria line.	**B.** Middle-school students are the only ones affected, so no other concern matters.
C. The fruit bowls are ceramic.	**D.** The cafeteria has proven the idea will work everywhere without needing more evidence.

Answer: A. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 23

Level 1

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Casey asking people to accept?

A. The coaching slides use blue headers.	**B.** The call center should give support agents weekly script coaching.
C. Support agents are the only ones affected, so no other concern matters.	**D.** The call center has proven the idea will work everywhere without needing more evidence.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 24

Level 1

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Jordan asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence.	**B.** Local homeowners are the only ones affected, so no other concern matters.
C. The water utility should send automatic household water-leak alerts.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 25

Level 1

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Riley asking people to accept?

A. The police department has proven the idea will work everywhere without needing more evidence.	**B.** Patrol officers are the only ones affected, so no other concern matters.
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**D.** The police department should send body-camera activation reminders before patrol shifts.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 26

Level 1

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Maya asking people to accept?

A. The election office should offer online mail-ballot tracking.	**B.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.
C. The election office has proven the idea will work everywhere without needing more evidence.	**D.** The ballot-tracking page uses county colors.

Answer: A. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 27

Level 1

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Sam asking people to accept?

A. The review prompts use a bell icon.	**B.** The tutoring app should send spaced-review prompts for language vocabulary.
C. Language learners are the only ones affected, so no other concern matters.	**D.** The tutoring app has proven the idea will work everywhere without needing more evidence.

Answer: B. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 28

Level 1

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Avery asking people to accept?

A. The gym has proven the idea will work everywhere without needing more evidence.	**B.** The orientation mats are black.
C. The gym should offer a beginner gym orientation.	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 29

Level 1

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Taylor asking people to accept?

A. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.	**B.** The insurer should send weekly safe-driving feedback.
C. Auto-insurance policyholders are the only ones affected, so no other concern matters.	**D.** The insurer has proven the idea will work everywhere without needing more evidence.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 30

Level 1

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Morgan asking people to accept?

A. The newsroom has proven the idea will work everywhere without needing more evidence.	**B.** Newsletter readers are the only ones affected, so no other concern matters.
C. The newsroom should place corrections at the top of articles.	**D.** The correction box has a gray border.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 31

Level 1

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Casey asking people to accept?

A. The farmers market should require clearer price signs at vendor stalls.	**B.** The farmers market has proven the idea will work everywhere without needing more evidence.
C. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.	**D.** Weekend farmers market shoppers are the only ones affected, so no other concern matters.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 32

Level 1

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Jordan asking people to accept?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.	**B.** The hotel has proven the idea will work everywhere without needing more evidence.
C. Overnight hotel guests are the only ones affected, so no other concern matters.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Maya asking people to accept?

A. The new buses were repainted blue.	**B.** The city council should extend evening bus service until midnight.
C. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**D.** Late-shift workers are the only ones affected, so no other concern matters.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 34

Level 2

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Sam asking people to accept?

A. The school board should require phone lockers during class.	**B.** Ninth-grade students are the only ones affected, so no other concern matters.
C. The school board has proven the idea will work everywhere without needing more evidence.	**D.** The lockers are installed near the gym.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The school board should require phone lockers during class. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 35

Level 2

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Avery asking people to accept?

A. The text messages use a green pill icon.	**B.** Patients over 60 are the only ones affected, so no other concern matters.
C. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.	**D.** The hospital should send medication reminder texts before evening doses.

Answer: D. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 36

Level 2

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Taylor asking people to accept?

A. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**B.** The company has proven the idea will work everywhere without needing more evidence.
C. The company should test a Monday-through-Thursday workweek.	**D.** Software engineers are the only ones affected, so no other concern matters.

Answer: C. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 37

Level 2

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Morgan asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence.	**B.** The grocery chain should add larger unit-price labels on shelf tags.
C. The shelf labels use bold black numbers.	**D.** Weekly grocery shoppers are the only ones affected, so no other concern matters.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 38

Level 2

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Casey asking people to accept?

A. The library should waive late fines for children's books.	**B.** The children's-book checkout desk moved six feet.
C. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.	**D.** Families checking out children's books are the only ones affected, so no other concern matters.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The library should waive late fines for children's books. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 39

Level 2

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Jordan asking people to accept?

A. The platform has proven the idea will work everywhere without needing more evidence.	**B.** Site administrators are the only ones affected, so no other concern matters.
C. The login button changed from green to blue.	**D.** The platform should require two-factor login for site administrators.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 40

Level 2

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Riley asking people to accept?

A. The new light poles are made of aluminum.	**B.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.
C. The neighborhood association should add brighter LED streetlights on Maple Street.	**D.** Residents on Maple Street are the only ones affected, so no other concern matters.

Answer: C. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 41

Level 2

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Maya asking people to accept?

A. The university has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.
C. The tutoring room has new chairs.	**D.** The university should expand peer tutoring in statistics.

Answer: D. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 42

Level 2

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Sam asking people to accept?

A. The restaurant group has proven the idea will work everywhere without needing more evidence.	**B.** The lunch menus are printed on thicker paper.
C. The restaurant group should show calorie labels on printed lunch menus.	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.

Answer: C. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 43

Level 2

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Avery asking people to accept?

A. The bank has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.
C. The bank should send overdraft warning texts before fees post.	**D.** Checking-account customers are the only ones affected, so no other concern matters.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 44

Level 2

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Taylor asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence.	**B.** Weekend trail hikers are the only ones affected, so no other concern matters.
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.	**D.** The park service should use timed-entry passes for weekend trail visits.

Answer: D. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 45

Level 2

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Morgan asking people to accept?

A. The museum should offer free admission on Fridays.	**B.** The museum has proven the idea will work everywhere without needing more evidence.
C. The Friday tickets are scanned at the east door.	**D.** Local families are the only ones affected, so no other concern matters.

Answer: A. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The museum should offer free admission on Fridays. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 46

Level 2

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Casey asking people to accept?

A. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.	**B.** The sports league should add mandatory sideline concussion checks.
C. Youth soccer players are the only ones affected, so no other concern matters.	**D.** The concussion checklist is printed on yellow paper.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 47

Level 2

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Jordan asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters.	**B.** The receipt email subject line changed.
C. The nonprofit should send donation receipts within one day.	**D.** The nonprofit has proven the idea will work everywhere without needing more evidence.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 48

Level 2

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Riley asking people to accept?

A. Warehouse staff are the only ones affected, so no other concern matters.	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.
C. The training room has a ceiling-mounted projector.	**D.** The warehouse should offer monthly lifting-safety and ergonomic training.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 49

Level 2

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Maya asking people to accept?

A. The city sanitation office should place compost bins in apartment lobbies.	**B.** Apartment residents are the only ones affected, so no other concern matters.
C. The lobby compost bins have foot pedals.	**D.** The city sanitation office has proven the idea will work everywhere without needing more evidence.

Answer: A. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 50

Level 2

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Sam asking people to accept?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.	**B.** The app maker should make new user profiles private by default.
C. The privacy screen uses a shield icon.	**D.** The app maker has proven the idea will work everywhere without needing more evidence.

Answer: B. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 51

Level 2

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Avery asking people to accept?

A. The clinic should reserve same-day appointment slots.	**B.** The clinic has proven the idea will work everywhere without needing more evidence.
C. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**D.** Primary-care patients are the only ones affected, so no other concern matters.

Answer: A. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 52

Level 2

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Taylor asking people to accept?

A. Domestic flight passengers are the only ones affected, so no other concern matters.	**B.** The airline should board passengers by seat zone.
C. The airline has proven the idea will work everywhere without needing more evidence.	**D.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The airline should board passengers by seat zone. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 53

Level 2

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Morgan asking people to accept?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.	**B.** The landlord should launch an online apartment repair portal.
C. The repair portal uses a house logo.	**D.** Apartment tenants are the only ones affected, so no other concern matters.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 54

Level 2

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Casey asking people to accept?

A. The cafeteria should move fruit bowls to the front of the cafeteria line.	**B.** The fruit bowls are ceramic.
C. Middle-school students are the only ones affected, so no other concern matters.	**D.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 55

Level 2

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Jordan asking people to accept?

A. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.	**B.** Support agents are the only ones affected, so no other concern matters.
C. The coaching slides use blue headers.	**D.** The call center should give support agents weekly script coaching.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 56

Level 2

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Riley asking people to accept?

A. Local homeowners are the only ones affected, so no other concern matters.	**B.** The water-leak alert screen includes a blue droplet icon.
C. The water utility should send automatic household water-leak alerts.	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.

Answer: C. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 57

Level 2

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Maya asking people to accept?

A. The reminder tone is two beeps.	**B.** The police department should send body-camera activation reminders before patrol shifts.
C. Patrol officers are the only ones affected, so no other concern matters.	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 58

Level 2

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Sam asking people to accept?

A. The election office should offer online mail-ballot tracking.	**B.** The ballot-tracking page uses county colors.
C. Mail voters are the only ones affected, so no other concern matters.	**D.** The election office has proven the idea will work everywhere without needing more evidence.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 59

Level 2

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Avery asking people to accept?

A. The review prompts use a bell icon.	**B.** The tutoring app has proven the idea will work everywhere without needing more evidence.
C. The tutoring app should send spaced-review prompts for language vocabulary.	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 60

Level 2

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Taylor asking people to accept?

A. The gym should offer a beginner gym orientation.	**B.** New gym members are the only ones affected, so no other concern matters.
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.	**D.** The gym has proven the idea will work everywhere without needing more evidence.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 61

Level 2

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Morgan asking people to accept?

A. Auto-insurance policyholders are the only ones affected, so no other concern matters.	**B.** The insurer has proven the idea will work everywhere without needing more evidence.
C. The feedback dashboard uses star ratings.	**D.** The insurer should send weekly safe-driving feedback.

Answer: D. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 62

Level 2

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Casey asking people to accept?

A. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.	**B.** The newsroom has proven the idea will work everywhere without needing more evidence.
C. The newsroom should place corrections at the top of articles.	**D.** Newsletter readers are the only ones affected, so no other concern matters.

Answer: C. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 63

Level 2

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Jordan asking people to accept?

A. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.	**B.** The farmers market should require clearer price signs at vendor stalls.
C. Weekend farmers market shoppers are the only ones affected, so no other concern matters.	**D.** The stall price signs are laminated.

Answer: B. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 64

Level 2

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Riley asking people to accept?

A. The quiet-hours text reminder uses a small moon icon.	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.
C. The hotel has proven the idea will work everywhere without needing more evidence.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Sam asking people to accept?

A. The new buses were repainted blue.	**B.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.
C. The city council should extend evening bus service until midnight.	**D.** The city council has proven the idea will work everywhere without needing more evidence.

Answer: C. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 66

Level 3

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Avery asking people to accept?

A. The lockers are installed near the gym.	**B.** The school board has proven the idea will work everywhere without needing more evidence.
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.	**D.** The school board should require phone lockers during class.

Answer: D. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The school board should require phone lockers during class. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 67

Level 3

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Taylor asking people to accept?

A. The hospital should send medication reminder texts before evening doses.	**B.** Patients over 60 are the only ones affected, so no other concern matters.
C. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.	**D.** The text messages use a green pill icon.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 68

Level 3

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Morgan asking people to accept?

A. The test calendar starts on a Monday.	**B.** The company should test a Monday-through-Thursday workweek.
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**D.** The company has proven the idea will work everywhere without needing more evidence.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 69

Level 3

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Casey asking people to accept?

A. The shelf labels use bold black numbers.	**B.** Weekly grocery shoppers are the only ones affected, so no other concern matters.
C. The grocery chain should add larger unit-price labels on shelf tags.	**D.** The grocery chain has proven the idea will work everywhere without needing more evidence.

Answer: C. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 70

Level 3

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Jordan asking people to accept?

A. The library has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.
C. The children's-book checkout desk moved six feet.	**D.** The library should waive late fines for children's books.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The library should waive late fines for children's books. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 71

Level 3

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Riley asking people to accept?

A. The platform should require two-factor login for site administrators.	**B.** Site administrators are the only ones affected, so no other concern matters.
C. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.	**D.** The login button changed from green to blue.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 72

Level 3

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Maya asking people to accept?

A. The neighborhood association has proven the idea will work everywhere without needing more evidence.	**B.** The neighborhood association should add brighter LED streetlights on Maple Street.
C. Residents on Maple Street are the only ones affected, so no other concern matters.	**D.** The new light poles are made of aluminum.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 73

Level 3

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Sam asking people to accept?

A. The university should expand peer tutoring in statistics.	**B.** First-year statistics students are the only ones affected, so no other concern matters.
C. The tutoring room has new chairs.	**D.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 74

Level 3

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Avery asking people to accept?

A. The restaurant group has proven the idea will work everywhere without needing more evidence.	**B.** The restaurant group should show calorie labels on printed lunch menus.
C. The lunch menus are printed on thicker paper.	**D.** Lunch customers are the only ones affected, so no other concern matters.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 75

Level 3

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Taylor asking people to accept?

A. The warning texts arrive from a short code.	**B.** The bank has proven the idea will work everywhere without needing more evidence.
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**D.** The bank should send overdraft warning texts before fees post.

Answer: D. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 76

Level 3

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Morgan asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence.	**B.** The park service should use timed-entry passes for weekend trail visits.
C. Weekend trail hikers are the only ones affected, so no other concern matters.	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 77

Level 3

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Casey asking people to accept?

A. Local families are the only ones affected, so no other concern matters.	**B.** The museum has proven the idea will work everywhere without needing more evidence.
C. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.	**D.** The museum should offer free admission on Fridays.

Answer: D. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The museum should offer free admission on Fridays. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 78

Level 3

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Jordan asking people to accept?

A. The concussion checklist is printed on yellow paper.	**B.** Youth soccer players are the only ones affected, so no other concern matters.
C. The sports league should add mandatory sideline concussion checks.	**D.** The sports league has proven the idea will work everywhere without needing more evidence.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 79

Level 3

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Riley asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters.	**B.** The nonprofit has proven the idea will work everywhere without needing more evidence.
C. The receipt email subject line changed.	**D.** The nonprofit should send donation receipts within one day.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 80

Level 3

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Maya asking people to accept?

A. The warehouse has proven the idea will work everywhere without needing more evidence.	**B.** The warehouse should offer monthly lifting-safety and ergonomic training.
C. The training room has a ceiling-mounted projector.	**D.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 81

Level 3

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Sam asking people to accept?

A. Apartment residents are the only ones affected, so no other concern matters.	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.
C. The lobby compost bins have foot pedals.	**D.** The city sanitation office should place compost bins in apartment lobbies.

Answer: D. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 82

Level 3

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Avery asking people to accept?

A. The app maker has proven the idea will work everywhere without needing more evidence.	**B.** The app maker should make new user profiles private by default.
C. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.	**D.** The privacy screen uses a shield icon.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 83

Level 3

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Taylor asking people to accept?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**B.** The clinic should reserve same-day appointment slots.
C. Primary-care patients are the only ones affected, so no other concern matters.	**D.** The appointment cards are white.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 84

Level 3

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Morgan asking people to accept?

A. The airline should board passengers by seat zone.	**B.** The gate signs are backlit.
C. Domestic flight passengers are the only ones affected, so no other concern matters.	**D.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.

Answer: A. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The airline should board passengers by seat zone. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 85

Level 3

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Casey asking people to accept?

A. The landlord has proven the idea will work everywhere without needing more evidence.	**B.** Apartment tenants are the only ones affected, so no other concern matters.
C. The landlord should launch an online apartment repair portal.	**D.** The repair portal uses a house logo.

Answer: C. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 86

Level 3

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Jordan asking people to accept?

A. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.	**B.** Middle-school students are the only ones affected, so no other concern matters.
C. The fruit bowls are ceramic.	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 87

Level 3

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Riley asking people to accept?

A. The call center should give support agents weekly script coaching.	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.
C. The call center has proven the idea will work everywhere without needing more evidence.	**D.** Support agents are the only ones affected, so no other concern matters.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 88

Level 3

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Maya asking people to accept?

A. Local homeowners are the only ones affected, so no other concern matters.	**B.** The water utility should send automatic household water-leak alerts.
C. The water utility has proven the idea will work everywhere without needing more evidence.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 89

Level 3

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Sam asking people to accept?

A. The police department should send body-camera activation reminders before patrol shifts.	**B.** Patrol officers are the only ones affected, so no other concern matters.
C. The police department has proven the idea will work everywhere without needing more evidence.	**D.** The reminder tone is two beeps.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 90

Level 3

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Avery asking people to accept?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**B.** The election office has proven the idea will work everywhere without needing more evidence.
C. The election office should offer online mail-ballot tracking.	**D.** Mail voters are the only ones affected, so no other concern matters.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 91

Level 3

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Taylor asking people to accept?

A. The tutoring app should send spaced-review prompts for language vocabulary.	**B.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.
C. The review prompts use a bell icon.	**D.** Language learners are the only ones affected, so no other concern matters.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 92

Level 3

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Morgan asking people to accept?

A. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.	**B.** New gym members are the only ones affected, so no other concern matters.
C. The gym should offer a beginner gym orientation.	**D.** The orientation mats are black.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 93

Level 3

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Casey asking people to accept?

A. The insurer should send weekly safe-driving feedback.	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.
C. Auto-insurance policyholders are the only ones affected, so no other concern matters.	**D.** The insurer has proven the idea will work everywhere without needing more evidence.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 94

Level 3

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Jordan asking people to accept?

A. The newsroom has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.
C. The newsroom should place corrections at the top of articles.	**D.** Newsletter readers are the only ones affected, so no other concern matters.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 95

Level 3

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Riley asking people to accept?

A. The stall price signs are laminated.	**B.** The farmers market has proven the idea will work everywhere without needing more evidence.
C. Weekend farmers market shoppers are the only ones affected, so no other concern matters.	**D.** The farmers market should require clearer price signs at vendor stalls.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 96

Level 3

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Maya asking people to accept?

A. The hotel has proven the idea will work everywhere without needing more evidence.	**B.** Overnight hotel guests are the only ones affected, so no other concern matters.
C. The hotel should send quiet-hours text reminders to hotel guests.	**D.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Avery asking people to accept?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**B.** The new buses were repainted blue.
C. The city council should extend evening bus service until midnight.	**D.** Late-shift workers are the only ones affected, so no other concern matters.

Answer: C. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 98

Level 4

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Taylor asking people to accept?

A. The school board should require phone lockers during class.	**B.** The lockers are installed near the gym.
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.	**D.** The school board has proven the idea will work everywhere without needing more evidence.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The school board should require phone lockers during class. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 99

Level 4

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Morgan asking people to accept?

A. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.	**B.** Patients over 60 are the only ones affected, so no other concern matters.
C. The hospital should send medication reminder texts before evening doses.	**D.** The hospital has proven the idea will work everywhere without needing more evidence.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 100

Level 4

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Casey asking people to accept?

A. The company should test a Monday-through-Thursday workweek.	**B.** Software engineers are the only ones affected, so no other concern matters.
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**D.** The company has proven the idea will work everywhere without needing more evidence.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 101

Level 4

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Jordan asking people to accept?

A. The grocery chain has proven the idea will work everywhere without needing more evidence.	**B.** Weekly grocery shoppers are the only ones affected, so no other concern matters.
C. The grocery chain should add larger unit-price labels on shelf tags.	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 102

Level 4

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Riley asking people to accept?

A. The library should waive late fines for children's books.	**B.** The children's-book checkout desk moved six feet.
C. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.	**D.** Families checking out children's books are the only ones affected, so no other concern matters.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The library should waive late fines for children's books. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 103

Level 4

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Maya asking people to accept?

A. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.	**B.** Site administrators are the only ones affected, so no other concern matters.
C. The platform should require two-factor login for site administrators.	**D.** The login button changed from green to blue.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 104

Level 4

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Sam asking people to accept?

A. The neighborhood association should add brighter LED streetlights on Maple Street.	**B.** Residents on Maple Street are the only ones affected, so no other concern matters.
C. The neighborhood association has proven the idea will work everywhere without needing more evidence.	**D.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 105

Level 4

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Avery asking people to accept?

A. The tutoring room has new chairs.	**B.** The university should expand peer tutoring in statistics.
C. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.	**D.** The university has proven the idea will work everywhere without needing more evidence.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 106

Level 4

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Taylor asking people to accept?

A. The restaurant group should show calorie labels on printed lunch menus.	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.
C. The restaurant group has proven the idea will work everywhere without needing more evidence.	**D.** Lunch customers are the only ones affected, so no other concern matters.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 107

Level 4

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Morgan asking people to accept?

A. The bank has proven the idea will work everywhere without needing more evidence.	**B.** The warning texts arrive from a short code.
C. The bank should send overdraft warning texts before fees post.	**D.** Checking-account customers are the only ones affected, so no other concern matters.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 108

Level 4

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Casey asking people to accept?

A. The park service has proven the idea will work everywhere without needing more evidence.	**B.** Weekend trail hikers are the only ones affected, so no other concern matters.
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.	**D.** The park service should use timed-entry passes for weekend trail visits.

Answer: D. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 109

Level 4

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Jordan asking people to accept?

A. The museum should offer free admission on Fridays.	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.
C. The museum has proven the idea will work everywhere without needing more evidence.	**D.** Local families are the only ones affected, so no other concern matters.

Answer: A. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The museum should offer free admission on Fridays. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 110

Level 4

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Riley asking people to accept?

A. The sports league has proven the idea will work everywhere without needing more evidence.	**B.** The sports league should add mandatory sideline concussion checks.
C. The concussion checklist is printed on yellow paper.	**D.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.

Answer: B. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 111

Level 4

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Maya asking people to accept?

A. First-time donors are the only ones affected, so no other concern matters.	**B.** The receipt email subject line changed.
C. The nonprofit should send donation receipts within one day.	**D.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 112

Level 4

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Sam asking people to accept?

A. Warehouse staff are the only ones affected, so no other concern matters.	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.
C. The training room has a ceiling-mounted projector.	**D.** The warehouse should offer monthly lifting-safety and ergonomic training.

Answer: D. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 113

Level 4

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Avery asking people to accept?

A. The city sanitation office should place compost bins in apartment lobbies.	**B.** The lobby compost bins have foot pedals.
C. The city sanitation office has proven the idea will work everywhere without needing more evidence.	**D.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.

Answer: A. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 114

Level 4

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Taylor asking people to accept?

A. New app users are the only ones affected, so no other concern matters.	**B.** The app maker should make new user profiles private by default.
C. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.	**D.** The app maker has proven the idea will work everywhere without needing more evidence.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The app maker should make new user profiles private by default. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 115

Level 4

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Morgan asking people to accept?

A. The appointment cards are white.	**B.** A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.
C. The clinic should reserve same-day appointment slots.	**D.** The clinic has proven the idea will work everywhere without needing more evidence.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 116

Level 4

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Casey asking people to accept?

A. The airline has proven the idea will work everywhere without needing more evidence.	**B.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.
C. Domestic flight passengers are the only ones affected, so no other concern matters.	**D.** The airline should board passengers by seat zone.

Answer: D. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The airline should board passengers by seat zone. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 117

Level 4

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Jordan asking people to accept?

A. The repair portal uses a house logo.	**B.** The landlord has proven the idea will work everywhere without needing more evidence.
C. Apartment tenants are the only ones affected, so no other concern matters.	**D.** The landlord should launch an online apartment repair portal.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 118

Level 4

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Riley asking people to accept?

A. The fruit bowls are ceramic.	**B.** The cafeteria should move fruit bowls to the front of the cafeteria line.
C. The cafeteria has proven the idea will work everywhere without needing more evidence.	**D.** Middle-school students are the only ones affected, so no other concern matters.

Answer: B. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 119

Level 4

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Maya asking people to accept?

A. Support agents are the only ones affected, so no other concern matters.	**B.** The call center has proven the idea will work everywhere without needing more evidence.
C. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.	**D.** The call center should give support agents weekly script coaching.

Answer: D. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 120

Level 4

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Sam asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence.	**B.** The water utility should send automatic household water-leak alerts.
C. Local homeowners are the only ones affected, so no other concern matters.	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.

Answer: B. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 121

Level 4

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Avery asking people to accept?

A. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**B.** The police department has proven the idea will work everywhere without needing more evidence.
C. The reminder tone is two beeps.	**D.** The police department should send body-camera activation reminders before patrol shifts.

Answer: D. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 122

Level 4

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Taylor asking people to accept?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**B.** The election office should offer online mail-ballot tracking.
C. Mail voters are the only ones affected, so no other concern matters.	**D.** The ballot-tracking page uses county colors.

Answer: B. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 123

Level 4

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Morgan asking people to accept?

A. Language learners are the only ones affected, so no other concern matters.	**B.** The review prompts use a bell icon.
C. The tutoring app has proven the idea will work everywhere without needing more evidence.	**D.** The tutoring app should send spaced-review prompts for language vocabulary.

Answer: D. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 124

Level 4

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Casey asking people to accept?

A. The gym has proven the idea will work everywhere without needing more evidence.	**B.** The gym should offer a beginner gym orientation.
C. The orientation mats are black.	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 125

Level 4

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Jordan asking people to accept?

A. The insurer has proven the idea will work everywhere without needing more evidence.	**B.** The insurer should send weekly safe-driving feedback.
C. The feedback dashboard uses star ratings.	**D.** Auto-insurance policyholders are the only ones affected, so no other concern matters.

Answer: B. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 126

Level 4

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Riley asking people to accept?

A. The newsroom should place corrections at the top of articles.	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.
C. Newsletter readers are the only ones affected, so no other concern matters.	**D.** The newsroom has proven the idea will work everywhere without needing more evidence.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 127

Level 4

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Maya asking people to accept?

A. Weekend farmers market shoppers are the only ones affected, so no other concern matters.	**B.** The farmers market has proven the idea will work everywhere without needing more evidence.
C. The farmers market should require clearer price signs at vendor stalls.	**D.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 128

Level 4

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Sam asking people to accept?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.	**B.** Overnight hotel guests are the only ones affected, so no other concern matters.
C. The hotel has proven the idea will work everywhere without needing more evidence.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the city council should extend evening bus service until midnight." Which claim is Taylor asking people to accept?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**B.** The new buses were repainted blue.
C. The city council should extend evening bus service until midnight.	**D.** Late-shift workers are the only ones affected, so no other concern matters.

Answer: C. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The city council should extend evening bus service until midnight. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 130

Level 5

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the school board should require phone lockers during class." Which claim is Morgan asking people to accept?

A. The lockers are installed near the gym.	**B.** A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.
C. The school board has proven the idea will work everywhere without needing more evidence.	**D.** The school board should require phone lockers during class.

Answer: D. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The school board should require phone lockers during class. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 131

Level 5

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the hospital should send medication reminder texts before evening doses." Which claim is Casey asking people to accept?

A. The hospital should send medication reminder texts before evening doses.	**B.** The text messages use a green pill icon.
C. Patients over 60 are the only ones affected, so no other concern matters.	**D.** The hospital has proven the idea will work everywhere without needing more evidence.

Answer: A. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hospital should send medication reminder texts before evening doses. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 132

Level 5

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the company should test a Monday-through-Thursday workweek." Which claim is Jordan asking people to accept?

A. The test calendar starts on a Monday.	**B.** The company should test a Monday-through-Thursday workweek.
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**D.** Software engineers are the only ones affected, so no other concern matters.

Answer: B. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The company should test a Monday-through-Thursday workweek. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 133

Level 5

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the grocery chain should add larger unit-price labels on shelf tags." Which claim is Riley asking people to accept?

A. The shelf labels use bold black numbers.	**B.** The grocery chain has proven the idea will work everywhere without needing more evidence.
C. The grocery chain should add larger unit-price labels on shelf tags.	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.

Answer: C. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The grocery chain should add larger unit-price labels on shelf tags. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 134

Level 5

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the library should waive late fines for children's books." Which claim is Maya asking people to accept?

A. The children's-book checkout desk moved six feet.	**B.** Families checking out children's books are the only ones affected, so no other concern matters.
C. The library has proven the idea will work everywhere without needing more evidence.	**D.** The library should waive late fines for children's books.

Answer: D. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The library should waive late fines for children's books. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 135

Level 5

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the platform should require two-factor login for site administrators." Which claim is Sam asking people to accept?

A. The platform should require two-factor login for site administrators.	**B.** The login button changed from green to blue.
C. The platform has proven the idea will work everywhere without needing more evidence.	**D.** Site administrators are the only ones affected, so no other concern matters.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The platform should require two-factor login for site administrators. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 136

Level 5

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the neighborhood association should add brighter LED streetlights on Maple Street." Which claim is Avery asking people to accept?

A. The new light poles are made of aluminum.	**B.** The neighborhood association should add brighter LED streetlights on Maple Street.
C. Residents on Maple Street are the only ones affected, so no other concern matters.	**D.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The neighborhood association should add brighter LED streetlights on Maple Street. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 137

Level 5

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the university should expand peer tutoring in statistics." Which claim is Taylor asking people to accept?

A. The university should expand peer tutoring in statistics.	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.
C. The tutoring room has new chairs.	**D.** The university has proven the idea will work everywhere without needing more evidence.

Answer: A. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The university should expand peer tutoring in statistics. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 138

Level 5

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the restaurant group should show calorie labels on printed lunch menus." Which claim is Morgan asking people to accept?

A. Lunch customers are the only ones affected, so no other concern matters.	**B.** The restaurant group should show calorie labels on printed lunch menus.
C. The lunch menus are printed on thicker paper.	**D.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.

Answer: B. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The restaurant group should show calorie labels on printed lunch menus. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 139

Level 5

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the bank should send overdraft warning texts before fees post." Which claim is Casey asking people to accept?

A. Checking-account customers are the only ones affected, so no other concern matters.	**B.** The bank should send overdraft warning texts before fees post.
C. The warning texts arrive from a short code.	**D.** A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The bank should send overdraft warning texts before fees post. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 140

Level 5

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the park service should use timed-entry passes for weekend trail visits." Which claim is Jordan asking people to accept?

A. The park service should use timed-entry passes for weekend trail visits.	**B.** The digital passes include a small trail map.
C. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.	**D.** Weekend trail hikers are the only ones affected, so no other concern matters.

Answer: A. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The park service should use timed-entry passes for weekend trail visits. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 141

Level 5

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the museum should offer free admission on Fridays." Which claim is Riley asking people to accept?

A. The Friday tickets are scanned at the east door.	**B.** The museum has proven the idea will work everywhere without needing more evidence.
C. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.	**D.** The museum should offer free admission on Fridays.

Answer: D. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The museum should offer free admission on Fridays. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 142

Level 5

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the sports league should add mandatory sideline concussion checks." Which claim is Maya asking people to accept?

A. The concussion checklist is printed on yellow paper.	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.
C. The sports league should add mandatory sideline concussion checks.	**D.** Youth soccer players are the only ones affected, so no other concern matters.

Answer: C. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The sports league should add mandatory sideline concussion checks. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 143

Level 5

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the nonprofit should send donation receipts within one day." Which claim is Sam asking people to accept?

A. The nonprofit has proven the idea will work everywhere without needing more evidence.	**B.** The nonprofit should send donation receipts within one day.
C. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.	**D.** The receipt email subject line changed.

Answer: B. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The nonprofit should send donation receipts within one day. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 144

Level 5

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the warehouse should offer monthly lifting-safety and ergonomic training." Which claim is Avery asking people to accept?

A. The warehouse should offer monthly lifting-safety and ergonomic training.	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.
C. The warehouse has proven the idea will work everywhere without needing more evidence.	**D.** The training room has a ceiling-mounted projector.

Answer: A. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The warehouse should offer monthly lifting-safety and ergonomic training. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 145

Level 5

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the city sanitation office should place compost bins in apartment lobbies." Which claim is Taylor asking people to accept?

A. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.	**B.** Apartment residents are the only ones affected, so no other concern matters.
C. The lobby compost bins have foot pedals.	**D.** The city sanitation office should place compost bins in apartment lobbies.

Answer: D. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The city sanitation office should place compost bins in apartment lobbies. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 146

Level 5

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the app maker should make new user profiles private by default." Which claim is Morgan asking people to accept?

A. The privacy screen uses a shield icon.	**B.** The app maker has proven the idea will work everywhere without needing more evidence.
C. The app maker should make new user profiles private by default.	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.

Answer: C. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The app maker should make new user profiles private by default. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

Question 147

Level 5

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the clinic should reserve same-day appointment slots." Which claim is Casey asking people to accept?

A. The clinic has proven the idea will work everywhere without needing more evidence.	**B.** The appointment cards are white.
C. Primary-care patients are the only ones affected, so no other concern matters.	**D.** The clinic should reserve same-day appointment slots.

Answer: D. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The clinic should reserve same-day appointment slots. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 148

Level 5

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the airline should board passengers by seat zone." Which claim is Jordan asking people to accept?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.	**B.** Domestic flight passengers are the only ones affected, so no other concern matters.
C. The airline should board passengers by seat zone.	**D.** The airline has proven the idea will work everywhere without needing more evidence.

Answer: C. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The airline should board passengers by seat zone. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 149

Level 5

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the landlord should launch an online apartment repair portal." Which claim is Riley asking people to accept?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.	**B.** The landlord has proven the idea will work everywhere without needing more evidence.
C. The landlord should launch an online apartment repair portal.	**D.** Apartment tenants are the only ones affected, so no other concern matters.

Answer: C. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The landlord should launch an online apartment repair portal. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 150

Level 5

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the cafeteria should move fruit bowls to the front of the cafeteria line." Which claim is Maya asking people to accept?

A. The fruit bowls are ceramic.	**B.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.
C. The cafeteria has proven the idea will work everywhere without needing more evidence.	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line.

Answer: D. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The cafeteria should move fruit bowls to the front of the cafeteria line. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 151

Level 5

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the call center should give support agents weekly script coaching." Which claim is Sam asking people to accept?

A. The call center should give support agents weekly script coaching.	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.
C. Support agents are the only ones affected, so no other concern matters.	**D.** The call center has proven the idea will work everywhere without needing more evidence.

Answer: A. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The call center should give support agents weekly script coaching. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 152

Level 5

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the water utility should send automatic household water-leak alerts." Which claim is Avery asking people to accept?

A. The water utility has proven the idea will work everywhere without needing more evidence.	**B.** The water utility should send automatic household water-leak alerts.
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.	**D.** Local homeowners are the only ones affected, so no other concern matters.

Answer: B. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The water utility should send automatic household water-leak alerts. The other options are either support, background, or an overclaim.

A. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

Question 153

Level 5

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Taylor, who supports the proposal, says, "Because of that test, the police department should send body-camera activation reminders before patrol shifts." Which claim is Taylor asking people to accept?

A. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**B.** Patrol officers are the only ones affected, so no other concern matters.
C. The police department should send body-camera activation reminders before patrol shifts.	**D.** The reminder tone is two beeps.

Answer: C. Taylor's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The police department should send body-camera activation reminders before patrol shifts. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 154

Level 5

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Morgan, who supports the proposal, says, "Because of that test, the election office should offer online mail-ballot tracking." Which claim is Morgan asking people to accept?

A. Mail voters are the only ones affected, so no other concern matters.	**B.** The ballot-tracking page uses county colors.
C. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**D.** The election office should offer online mail-ballot tracking.

Answer: D. Morgan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The election office should offer online mail-ballot tracking. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 155

Level 5

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Casey, who supports the proposal, says, "Because of that test, the tutoring app should send spaced-review prompts for language vocabulary." Which claim is Casey asking people to accept?

A. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.	**B.** The tutoring app should send spaced-review prompts for language vocabulary.
C. Language learners are the only ones affected, so no other concern matters.	**D.** The review prompts use a bell icon.

Answer: B. Casey's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The tutoring app should send spaced-review prompts for language vocabulary. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 156

Level 5

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Jordan, who supports the proposal, says, "Because of that test, the gym should offer a beginner gym orientation." Which claim is Jordan asking people to accept?

A. The orientation mats are black.	**B.** New gym members are the only ones affected, so no other concern matters.
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.	**D.** The gym should offer a beginner gym orientation.

Answer: D. Jordan's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is D because it states the point the speaker wants accepted: The gym should offer a beginner gym orientation. The other options are either support, background, or an overclaim.

A. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

B. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

C. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

D. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

Question 157

Level 5

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Riley, who supports the proposal, says, "Because of that test, the insurer should send weekly safe-driving feedback." Which claim is Riley asking people to accept?

A. The insurer should send weekly safe-driving feedback.	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.
C. Auto-insurance policyholders are the only ones affected, so no other concern matters.	**D.** The insurer has proven the idea will work everywhere without needing more evidence.

Answer: A. Riley's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The insurer should send weekly safe-driving feedback. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 158

Level 5

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Maya, who supports the proposal, says, "Because of that test, the newsroom should place corrections at the top of articles." Which claim is Maya asking people to accept?

A. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.	**B.** The newsroom should place corrections at the top of articles.
C. Newsletter readers are the only ones affected, so no other concern matters.	**D.** The newsroom has proven the idea will work everywhere without needing more evidence.

Answer: B. Maya's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is B because it states the point the speaker wants accepted: The newsroom should place corrections at the top of articles. The other options are either support, background, or an overclaim.

A. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

B. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This overstates the argument. The speaker recommends the plan, but does not claim it has been proven to work everywhere.

Question 159

Level 5

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Sam, who supports the proposal, says, "Because of that test, the farmers market should require clearer price signs at vendor stalls." Which claim is Sam asking people to accept?

A. Weekend farmers market shoppers are the only ones affected, so no other concern matters.	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.
C. The farmers market should require clearer price signs at vendor stalls.	**D.** The stall price signs are laminated.

Answer: C. Sam's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is C because it states the point the speaker wants accepted: The farmers market should require clearer price signs at vendor stalls. The other options are either support, background, or an overclaim.

A. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Question 160

Level 5

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Avery, who supports the proposal, says, "Because of that test, the hotel should send quiet-hours text reminders to hotel guests." Which claim is Avery asking people to accept?

A. The hotel should send quiet-hours text reminders to hotel guests.	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.
C. Overnight hotel guests are the only ones affected, so no other concern matters.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: A. Avery's main claim is the recommendation. The test result is a reason offered for that claim, not the claim itself.

How to work it out. To uncover the answer, separate the speaker's recommendation from the evidence used to support it. The correct choice is A because it states the point the speaker wants accepted: The hotel should send quiet-hours text reminders to hotel guests. The other options are either support, background, or an overclaim.

A. Correct. This is the recommendation the speaker wants people to accept. The test result is only a reason for that recommendation, and the side details do not state what should be done.

B. Not correct. This is evidence from the test, so it helps support the speaker's point. It is not the claim the speaker is asking people to accept.

C. Not correct. This adds an extreme claim about who matters. The speaker's actual claim is the recommendation about the proposal.

D. Not correct. This is a side detail from the setup. A main claim is the point the speaker wants accepted, not a visible or background detail.

Skill 02

Define Key Terms

What Do the Words Mean?

Find the word or phrase that needs a clearer meaning. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Which word or phrase must be made clearer before the argument can be fairly judged?
Why it matters	Vague words let people agree too quickly and disagree too late. Terms such as fair, safe, enough, harmful, or successful can carry the whole argument while meaning different things to different people.
Conceptual core	Arguments often turn on ordinary words that hide a standard. Words like safe, fair, effective, affordable, harmful, successful, and better invite disagreement unless the speaker says what would count. Defining terms does not settle the whole argument, but it makes the argument testable. The goal is not to demand definitions for every word; it is to find the term that carries the burden of the conclusion.
Student method	Find the word that sets the standard for judgment. If reasonable people could ask, How much? In what way? By whose measure? or Compared with what?, the word probably needs a sharper definition.
Analogy	A vague term is like a blurry ruler. You can measure with it only after the markings are clear.
Assessment focus	A good answer selects the vague or standard-setting phrase and can explain what kind of definition would make the claim testable.

Teaching Sequence

1. Look for judgment words, threshold words, and comparison words.

2. Ask what someone would need to count or observe to apply the term.

3. Distinguish unclear key terms from details that are already specific.

4. Test whether two reasonable readers could interpret the word differently.

Common Confusions To Watch For

1. Students may pick a familiar word simply because it appears often in the prompt.

2. Students may think a term is clear because they have a private meaning for it.

3. Students may define a side detail while leaving the standard that matters untouched.

Teacher Prompts

1. What would count as enough?

2. What would two people disagree about even if they agreed on the facts?

3. Can we measure or apply this word without adding a standard?

Worked Example

Scenario	A school says a phone rule is justified because it creates a healthier classroom.
Teacher think-aloud	The word healthier is doing the work. Does it mean fewer distractions, less anxiety, better grades, more sleep, or better social interaction? Until that term is defined, the rule cannot be judged clearly.
Student takeaway	The key term is the one that hides the standard for success.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A principal says a new phone rule makes lessons 'better'. In the same ten classes, weekly phone interruptions fell from 20 to 12, but average test scores stayed at 70 out of 100. Both figures compare the four weeks before the rule with the four weeks after it.

What To Do

1. Write two possible definitions of 'better': one using interruptions and one using test scores. For each, state the direction of improvement and the comparison period.

2. Apply each definition to the supplied figures and say whether it shows an improvement.

3. Finish with one sentence explaining why the school's purpose should guide its choice of measure before results are inspected.

Check before reading the answer. Could a reader apply your two rules to the figures without guessing? Separate observing a change from claiming the rule caused it.

Model Answer

Definition 1: fewer weekly phone interruptions across these ten classes in the four weeks after the rule than before it. This measure improves from 20 to 12. Definition 2: a higher average test score in the same classes and periods. This measure shows no improvement: 70 in both periods. The school should choose according to whether its purpose is reducing disruption or improving test performance, rather than picking whichever result looks best.

Why it is adequate. Both definitions specify an observable measure, direction, group, and comparison; the answer shows how the conclusion depends on the definition.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Riley says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "safe"	**B.** "approve it"
C. "aimed at late-shift workers"	**D.** "weighing a proposal"

Answer: A. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "safe" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 2

Level 1

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Maya says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan"	**B.** "reasonable"
C. "aimed at ninth-grade students"	**D.** "weighing a proposal"

Answer: B. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 3

Level 1

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Sam says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal"	**B.** "approve it"
C. "fair"	**D.** "the plan"

Answer: C. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "fair" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 4

Level 1

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Avery says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "the plan"	**B.** "aimed at software engineers"
C. "weighing a proposal"	**D.** "affordable"

Answer: D. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "affordable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 5

Level 1

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Taylor says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "significant"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at weekly grocery shoppers"

Answer: A. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "significant" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 6

Level 1

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Morgan says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "experienced"
C. "aimed at families checking out children's books"	**D.** "the plan"

Answer: B. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "experienced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 7

Level 1

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Casey says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at site administrators"	**B.** "the plan"
C. "soon"	**D.** "approve it"

Answer: C. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "soon" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 8

Level 1

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Jordan says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan"	**B.** "approve it"
C. "aimed at residents on Maple Street"	**D.** "local"

Answer: D. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "local" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 9

Level 1

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Riley says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "high-quality"	**B.** "weighing a proposal"
C. "approve it"	**D.** "the plan"

Answer: A. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 10

Level 1

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Maya says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at lunch customers"	**B.** "enough"
C. "weighing a proposal"	**D.** "the plan"

Answer: B. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "enough" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 11

Level 1

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Sam says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at checking-account customers"	**B.** "reliable"
C. "the plan"	**D.** "approve it"

Answer: B. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reliable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 12

Level 1

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Avery says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "harmful"	**B.** "aimed at weekend trail hikers"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "harmful" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 13

Level 1

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Taylor says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at local families"	**B.** "weighing a proposal"
C. "approve it"	**D.** "transparent"

Answer: D. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "transparent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 14

Level 1

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Morgan says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it"	**B.** "the plan"
C. "successful"	**D.** "weighing a proposal"

Answer: C. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "successful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 15

Level 1

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Casey says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "approve it"	**B.** "at-risk"
C. "the plan"	**D.** "weighing a proposal"

Answer: B. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 16

Level 1

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Jordan says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "frequent"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at warehouse staff"

Answer: A. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "frequent" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 17

Level 1

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Riley says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan"	**B.** "weighing a proposal"
C. "approve it"	**D.** "serious"

Answer: D. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "serious" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 18

Level 1

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Maya says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal"	**B.** "aimed at new app users"
C. "accessible"	**D.** "the plan"

Answer: C. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "accessible" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 19

Level 1

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Sam says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal"	**B.** "normal"
C. "the plan"	**D.** "aimed at primary-care patients"

Answer: B. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "normal" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 20

Level 1

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Avery says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "excessive"	**B.** "aimed at domestic flight passengers"
C. "weighing a proposal"	**D.** "approve it"

Answer: A. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "excessive" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 21

Level 1

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Taylor says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "moderate"	**B.** "approve it"
C. "aimed at apartment tenants"	**D.** "the plan"

Answer: A. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "moderate" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 22

Level 1

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Morgan says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at middle-school students"	**B.** "qualified"
C. "the plan"	**D.** "approve it"

Answer: B. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "qualified" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 23

Level 1

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Casey says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at support agents"	**B.** "approve it"
C. "substantial"	**D.** "the plan"

Answer: C. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "substantial" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 24

Level 1

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Jordan says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan"	**B.** "approve it"
C. "weighing a proposal"	**D.** "clean"

Answer: D. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "clean" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 25

Level 1

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Riley says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "secure"	**B.** "aimed at patrol officers"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "secure" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 26

Level 1

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Maya says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it"	**B.** "balanced"
C. "aimed at mail voters"	**D.** "weighing a proposal"

Answer: B. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "balanced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 27

Level 1

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Sam says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it"	**B.** "the plan"
C. "urgent"	**D.** "aimed at language learners"

Answer: C. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "urgent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 28

Level 1

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Avery says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "weighing a proposal"
C. "aimed at new gym members"	**D.** "independent"

Answer: D. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "independent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 29

Level 1

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Taylor says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at auto-insurance policyholders"	**B.** "weighing a proposal"
C. "diverse"	**D.** "approve it"

Answer: C. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "diverse" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 30

Level 1

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Morgan says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it"	**B.** "the plan"
C. "weighing a proposal"	**D.** "efficient"

Answer: D. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "efficient" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 31

Level 1

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Casey says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "aimed at weekend farmers market shoppers"
C. "the plan"	**D.** "appropriate"

Answer: D. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 32

Level 1

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Jordan says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it"	**B.** "aimed at overnight hotel guests"
C. "meaningful"	**D.** "weighing a proposal"

Answer: C. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Maya says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at late-shift workers"	**B.** "approve it"
C. "weighing a proposal"	**D.** "safe"

Answer: D. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "safe" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 34

Level 2

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Sam says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan"	**B.** "aimed at ninth-grade students"
C. "reasonable"	**D.** "weighing a proposal"

Answer: C. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 35

Level 2

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Avery says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "fair"
C. "the plan"	**D.** "aimed at patients over 60"

Answer: B. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "fair" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 36

Level 2

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Taylor says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "affordable"	**B.** "aimed at software engineers"
C. "the plan"	**D.** "approve it"

Answer: A. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 37

Level 2

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Morgan says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "aimed at weekly grocery shoppers"
C. "the plan"	**D.** "significant"

Answer: D. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "significant" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 38

Level 2

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Casey says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "the plan"
C. "experienced"	**D.** "approve it"

Answer: C. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 39

Level 2

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Jordan says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "weighing a proposal"	**B.** "soon"
C. "approve it"	**D.** "aimed at site administrators"

Answer: B. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "soon" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 40

Level 2

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Riley says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "local"	**B.** "aimed at residents on Maple Street"
C. "the plan"	**D.** "weighing a proposal"

Answer: A. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 41

Level 2

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Maya says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at first-year statistics students"	**B.** "high-quality"
C. "weighing a proposal"	**D.** "approve it"

Answer: B. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 42

Level 2

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Sam says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "enough"	**B.** "aimed at lunch customers"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "enough" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 43

Level 2

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Avery says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "reliable"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at checking-account customers"

Answer: A. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "reliable" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 44

Level 2

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Taylor says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "weighing a proposal"	**B.** "harmful"
C. "approve it"	**D.** "aimed at weekend trail hikers"

Answer: B. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "harmful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 45

Level 2

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Morgan says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "aimed at local families"
C. "transparent"	**D.** "the plan"

Answer: C. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "transparent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 46

Level 2

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Casey says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "the plan"
C. "aimed at youth soccer players"	**D.** "successful"

Answer: D. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "successful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 47

Level 2

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Jordan says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "at-risk"	**B.** "approve it"
C. "the plan"	**D.** "aimed at first-time donors"

Answer: A. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 48

Level 2

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Riley says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal"	**B.** "frequent"
C. "aimed at warehouse staff"	**D.** "the plan"

Answer: B. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "frequent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 49

Level 2

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Maya says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it"	**B.** "aimed at apartment residents"
C. "serious"	**D.** "weighing a proposal"

Answer: C. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "serious" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 50

Level 2

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Sam says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal"	**B.** "approve it"
C. "aimed at new app users"	**D.** "accessible"

Answer: D. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "accessible" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 51

Level 2

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Avery says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "the plan"	**B.** "approve it"
C. "normal"	**D.** "weighing a proposal"

Answer: C. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "normal" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 52

Level 2

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Taylor says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at domestic flight passengers"	**B.** "weighing a proposal"
C. "approve it"	**D.** "excessive"

Answer: D. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "excessive" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 53

Level 2

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Morgan says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at apartment tenants"	**B.** "moderate"
C. "approve it"	**D.** "the plan"

Answer: B. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "moderate" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 54

Level 2

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Casey says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "qualified"	**B.** "approve it"
C. "the plan"	**D.** "weighing a proposal"

Answer: A. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "qualified" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 55

Level 2

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Jordan says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan"	**B.** "approve it"
C. "weighing a proposal"	**D.** "substantial"

Answer: D. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "substantial" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 56

Level 2

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Riley says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at local homeowners"	**B.** "weighing a proposal"
C. "clean"	**D.** "approve it"

Answer: C. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "clean" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 57

Level 2

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Maya says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal"	**B.** "secure"
C. "aimed at patrol officers"	**D.** "the plan"

Answer: B. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "secure" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 58

Level 2

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Sam says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "balanced"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at mail voters"

Answer: A. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "balanced" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 59

Level 2

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Avery says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "weighing a proposal"
C. "the plan"	**D.** "urgent"

Answer: D. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "urgent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 60

Level 2

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Taylor says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan"	**B.** "aimed at new gym members"
C. "independent"	**D.** "approve it"

Answer: C. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "independent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 61

Level 2

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Morgan says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "approve it"	**B.** "the plan"
C. "weighing a proposal"	**D.** "diverse"

Answer: D. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "diverse" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 62

Level 2

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Casey says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan"	**B.** "weighing a proposal"
C. "efficient"	**D.** "aimed at newsletter readers"

Answer: C. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 63

Level 2

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Jordan says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "appropriate"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at weekend farmers market shoppers"

Answer: A. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 64

Level 2

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Riley says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal"	**B.** "meaningful"
C. "approve it"	**D.** "aimed at overnight hotel guests"

Answer: B. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Sam says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at late-shift workers"	**B.** "the plan"
C. "safe"	**D.** "weighing a proposal"

Answer: C. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "safe" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 66

Level 3

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Avery says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "weighing a proposal"	**B.** "aimed at ninth-grade students"
C. "the plan"	**D.** "reasonable"

Answer: D. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 67

Level 3

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Taylor says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "fair"	**B.** "approve it"
C. "the plan"	**D.** "weighing a proposal"

Answer: A. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "fair" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 68

Level 3

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Morgan says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "affordable"
C. "approve it"	**D.** "aimed at software engineers"

Answer: B. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "affordable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 69

Level 3

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Casey says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "the plan"
C. "significant"	**D.** "approve it"

Answer: C. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "significant" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 70

Level 3

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Jordan says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at families checking out children's books"	**B.** "weighing a proposal"
C. "the plan"	**D.** "experienced"

Answer: D. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "experienced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 71

Level 3

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Riley says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "soon"	**B.** "approve it"
C. "the plan"	**D.** "weighing a proposal"

Answer: A. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "soon" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 72

Level 3

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Maya says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan"	**B.** "local"
C. "aimed at residents on Maple Street"	**D.** "approve it"

Answer: B. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "local" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 73

Level 3

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Sam says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "weighing a proposal"	**B.** "approve it"
C. "high-quality"	**D.** "aimed at first-year statistics students"

Answer: C. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 74

Level 3

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Avery says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "aimed at lunch customers"	**B.** "weighing a proposal"
C. "approve it"	**D.** "enough"

Answer: D. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "enough" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 75

Level 3

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Taylor says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at checking-account customers"	**B.** "reliable"
C. "the plan"	**D.** "approve it"

Answer: B. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "reliable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 76

Level 3

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Morgan says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "harmful"	**B.** "weighing a proposal"
C. "aimed at weekend trail hikers"	**D.** "the plan"

Answer: A. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "harmful" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 77

Level 3

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Casey says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan"	**B.** "approve it"
C. "aimed at local families"	**D.** "transparent"

Answer: D. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "transparent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 78

Level 3

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Jordan says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it"	**B.** "aimed at youth soccer players"
C. "successful"	**D.** "the plan"

Answer: C. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "successful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 79

Level 3

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Riley says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at first-time donors"	**B.** "at-risk"
C. "the plan"	**D.** "approve it"

Answer: B. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 80

Level 3

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Maya says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "frequent"	**B.** "the plan"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "frequent" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 81

Level 3

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Sam says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan"	**B.** "approve it"
C. "weighing a proposal"	**D.** "serious"

Answer: D. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "serious" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 82

Level 3

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Avery says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "aimed at new app users"
C. "accessible"	**D.** "the plan"

Answer: C. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "accessible" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 83

Level 3

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Taylor says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "weighing a proposal"	**B.** "normal"
C. "aimed at primary-care patients"	**D.** "the plan"

Answer: B. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "normal" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 84

Level 3

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Morgan says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "excessive"	**B.** "weighing a proposal"
C. "aimed at domestic flight passengers"	**D.** "the plan"

Answer: A. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "excessive" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 85

Level 3

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Casey says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "moderate"	**B.** "weighing a proposal"
C. "approve it"	**D.** "the plan"

Answer: A. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "moderate" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 86

Level 3

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Jordan says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it"	**B.** "qualified"
C. "weighing a proposal"	**D.** "the plan"

Answer: B. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "qualified" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 87

Level 3

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Riley says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal"	**B.** "aimed at support agents"
C. "substantial"	**D.** "the plan"

Answer: C. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "substantial" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 88

Level 3

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Maya says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan"	**B.** "weighing a proposal"
C. "aimed at local homeowners"	**D.** "clean"

Answer: D. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "clean" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 89

Level 3

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Sam says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "secure"	**B.** "weighing a proposal"
C. "approve it"	**D.** "the plan"

Answer: A. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "secure" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 90

Level 3

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Avery says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "balanced"
C. "weighing a proposal"	**D.** "aimed at mail voters"

Answer: B. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "balanced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 91

Level 3

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Taylor says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan"	**B.** "approve it"
C. "urgent"	**D.** "weighing a proposal"

Answer: C. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "urgent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 92

Level 3

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Morgan says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at new gym members"	**B.** "the plan"
C. "approve it"	**D.** "independent"

Answer: D. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "independent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 93

Level 3

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Casey says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "diverse"	**B.** "aimed at auto-insurance policyholders"
C. "weighing a proposal"	**D.** "approve it"

Answer: A. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "diverse" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 94

Level 3

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Jordan says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at newsletter readers"	**B.** "efficient"
C. "the plan"	**D.** "approve it"

Answer: B. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "efficient" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 95

Level 3

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Riley says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "approve it"	**B.** "aimed at weekend farmers market shoppers"
C. "weighing a proposal"	**D.** "appropriate"

Answer: D. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 96

Level 3

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Maya says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it"	**B.** "aimed at overnight hotel guests"
C. "meaningful"	**D.** "the plan"

Answer: C. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Avery says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "aimed at late-shift workers"
C. "the plan"	**D.** "safe"

Answer: D. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "safe" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 98

Level 4

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Taylor says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "approve it"	**B.** "aimed at ninth-grade students"
C. "reasonable"	**D.** "weighing a proposal"

Answer: C. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 99

Level 4

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Morgan says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at patients over 60"	**B.** "fair"
C. "approve it"	**D.** "weighing a proposal"

Answer: B. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "fair" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 100

Level 4

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Casey says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "affordable"	**B.** "aimed at software engineers"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 101

Level 4

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Jordan says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan"	**B.** "approve it"
C. "weighing a proposal"	**D.** "significant"

Answer: D. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "significant" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 102

Level 4

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Riley says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan"	**B.** "weighing a proposal"
C. "experienced"	**D.** "aimed at families checking out children's books"

Answer: C. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 103

Level 4

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Maya says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it"	**B.** "soon"
C. "weighing a proposal"	**D.** "aimed at site administrators"

Answer: B. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "soon" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 104

Level 4

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Sam says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "local"	**B.** "approve it"
C. "weighing a proposal"	**D.** "aimed at residents on Maple Street"

Answer: A. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 105

Level 4

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Avery says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "weighing a proposal"	**B.** "approve it"
C. "the plan"	**D.** "high-quality"

Answer: D. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 106

Level 4

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Taylor says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan"	**B.** "approve it"
C. "enough"	**D.** "weighing a proposal"

Answer: C. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "enough" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 107

Level 4

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Morgan says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "the plan"
C. "reliable"	**D.** "approve it"

Answer: C. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reliable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 108

Level 4

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Casey says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "approve it"
C. "aimed at weekend trail hikers"	**D.** "harmful"

Answer: D. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "harmful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 109

Level 4

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Jordan says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "transparent"	**B.** "aimed at local families"
C. "weighing a proposal"	**D.** "approve it"

Answer: A. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "transparent" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 110

Level 4

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Riley says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "approve it"	**B.** "successful"
C. "aimed at youth soccer players"	**D.** "the plan"

Answer: B. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "successful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 111

Level 4

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Maya says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal"	**B.** "aimed at first-time donors"
C. "at-risk"	**D.** "approve it"

Answer: C. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 112

Level 4

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Sam says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan"	**B.** "aimed at warehouse staff"
C. "approve it"	**D.** "frequent"

Answer: D. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "frequent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 113

Level 4

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Avery says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "serious"	**B.** "aimed at apartment residents"
C. "the plan"	**D.** "approve it"

Answer: A. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "serious" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 114

Level 4

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Taylor says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at new app users"	**B.** "accessible"
C. "weighing a proposal"	**D.** "approve it"

Answer: B. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "accessible" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 115

Level 4

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Morgan says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "normal"	**B.** "the plan"
C. "aimed at primary-care patients"	**D.** "weighing a proposal"

Answer: A. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "normal" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 116

Level 4

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Casey says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "the plan"	**B.** "excessive"
C. "approve it"	**D.** "weighing a proposal"

Answer: B. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "excessive" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 117

Level 4

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Jordan says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it"	**B.** "the plan"
C. "weighing a proposal"	**D.** "moderate"

Answer: D. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "moderate" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 118

Level 4

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Riley says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at middle-school students"	**B.** "weighing a proposal"
C. "qualified"	**D.** "the plan"

Answer: C. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "qualified" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 119

Level 4

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Maya says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "weighing a proposal"	**B.** "substantial"
C. "approve it"	**D.** "the plan"

Answer: B. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "substantial" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 120

Level 4

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Sam says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "clean"	**B.** "weighing a proposal"
C. "aimed at local homeowners"	**D.** "the plan"

Answer: A. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "clean" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 121

Level 4

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Avery says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "weighing a proposal"
C. "the plan"	**D.** "secure"

Answer: D. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "secure" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 122

Level 4

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Taylor says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan"	**B.** "weighing a proposal"
C. "balanced"	**D.** "aimed at mail voters"

Answer: C. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "balanced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 123

Level 4

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Morgan says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "aimed at language learners"	**B.** "urgent"
C. "the plan"	**D.** "approve it"

Answer: B. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "urgent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 124

Level 4

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Casey says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "independent"	**B.** "aimed at new gym members"
C. "the plan"	**D.** "weighing a proposal"

Answer: A. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "independent" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 125

Level 4

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Jordan says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "weighing a proposal"	**B.** "the plan"
C. "aimed at auto-insurance policyholders"	**D.** "diverse"

Answer: D. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "diverse" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 126

Level 4

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Riley says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan"	**B.** "weighing a proposal"
C. "efficient"	**D.** "approve it"

Answer: C. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 127

Level 4

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Maya says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "appropriate"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at weekend farmers market shoppers"

Answer: A. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 128

Level 4

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Sam says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "the plan"	**B.** "meaningful"
C. "approve it"	**D.** "weighing a proposal"

Answer: B. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. At the meeting, Taylor says, "Let's approve it only if the plan is safe." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "approve it"	**B.** "safe"
C. "weighing a proposal"	**D.** "the plan"

Answer: B. The word "safe" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "safe" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "safe" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 130

Level 5

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. At the meeting, Morgan says, "Let's approve it only if the plan is reasonable." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "aimed at ninth-grade students"
C. "reasonable"	**D.** "approve it"

Answer: C. The word "reasonable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reasonable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "reasonable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 131

Level 5

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. At the meeting, Casey says, "Let's approve it only if the plan is fair." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "aimed at patients over 60"
C. "approve it"	**D.** "fair"

Answer: D. The word "fair" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "fair" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "fair" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 132

Level 5

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. At the meeting, Jordan says, "Let's approve it only if the plan is affordable." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "affordable"	**B.** "approve it"
C. "the plan"	**D.** "aimed at software engineers"

Answer: A. The word "affordable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "affordable" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "affordable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 133

Level 5

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. At the meeting, Riley says, "Let's approve it only if the plan is significant." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "weighing a proposal"	**B.** "significant"
C. "aimed at weekly grocery shoppers"	**D.** "approve it"

Answer: B. The word "significant" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "significant" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "significant" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 134

Level 5

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. At the meeting, Maya says, "Let's approve it only if the plan is experienced." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "the plan"	**B.** "aimed at families checking out children's books"
C. "experienced"	**D.** "weighing a proposal"

Answer: C. The word "experienced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "experienced" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "experienced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 135

Level 5

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. At the meeting, Sam says, "Let's approve it only if the plan is soon." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it"	**B.** "the plan"
C. "weighing a proposal"	**D.** "soon"

Answer: D. The word "soon" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "soon" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "soon" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 136

Level 5

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. At the meeting, Avery says, "Let's approve it only if the plan is local." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "local"	**B.** "weighing a proposal"
C. "the plan"	**D.** "aimed at residents on Maple Street"

Answer: A. The word "local" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "local" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "local" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 137

Level 5

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. At the meeting, Taylor says, "Let's approve it only if the plan is high-quality." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "aimed at first-year statistics students"	**B.** "the plan"
C. "weighing a proposal"	**D.** "high-quality"

Answer: D. The word "high-quality" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "high-quality" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Correct. "high-quality" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 138

Level 5

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. At the meeting, Morgan says, "Let's approve it only if the plan is enough." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "enough"	**B.** "the plan"
C. "weighing a proposal"	**D.** "aimed at lunch customers"

Answer: A. The word "enough" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "enough" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "enough" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 139

Level 5

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. At the meeting, Casey says, "Let's approve it only if the plan is reliable." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "approve it"	**B.** "the plan"
C. "reliable"	**D.** "aimed at checking-account customers"

Answer: C. The word "reliable" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "reliable" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "reliable" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 140

Level 5

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. At the meeting, Jordan says, "Let's approve it only if the plan is harmful." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "aimed at weekend trail hikers"	**B.** "harmful"
C. "the plan"	**D.** "weighing a proposal"

Answer: B. The word "harmful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "harmful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Correct. "harmful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 141

Level 5

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. At the meeting, Riley says, "Let's approve it only if the plan is transparent." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "transparent"	**B.** "aimed at local families"
C. "the plan"	**D.** "approve it"

Answer: A. The word "transparent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "transparent" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "transparent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 142

Level 5

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. At the meeting, Maya says, "Let's approve it only if the plan is successful." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "aimed at youth soccer players"	**B.** "approve it"
C. "the plan"	**D.** "successful"

Answer: D. The word "successful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "successful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "successful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 143

Level 5

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. At the meeting, Sam says, "Let's approve it only if the plan is at-risk." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "aimed at first-time donors"	**B.** "weighing a proposal"
C. "at-risk"	**D.** "approve it"

Answer: C. The word "at-risk" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "at-risk" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Correct. "at-risk" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 144

Level 5

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. At the meeting, Avery says, "Let's approve it only if the plan is frequent." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "frequent"
C. "weighing a proposal"	**D.** "aimed at warehouse staff"

Answer: B. The word "frequent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "frequent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "frequent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 145

Level 5

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. At the meeting, Taylor says, "Let's approve it only if the plan is serious." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "serious"	**B.** "aimed at apartment residents"
C. "weighing a proposal"	**D.** "approve it"

Answer: A. The word "serious" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "serious" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "serious" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 146

Level 5

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. At the meeting, Morgan says, "Let's approve it only if the plan is accessible." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "weighing a proposal"	**B.** "aimed at new app users"
C. "the plan"	**D.** "accessible"

Answer: D. The word "accessible" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "accessible" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Correct. "accessible" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 147

Level 5

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. At the meeting, Casey says, "Let's approve it only if the plan is normal." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "aimed at primary-care patients"	**B.** "the plan"
C. "normal"	**D.** "approve it"

Answer: C. The word "normal" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "normal" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "normal" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 148

Level 5

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. At the meeting, Jordan says, "Let's approve it only if the plan is excessive." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "the plan"	**B.** "excessive"
C. "weighing a proposal"	**D.** "approve it"

Answer: B. The word "excessive" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "excessive" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "excessive" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 149

Level 5

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. At the meeting, Riley says, "Let's approve it only if the plan is moderate." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "aimed at apartment tenants"	**B.** "the plan"
C. "approve it"	**D.** "moderate"

Answer: D. The word "moderate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "moderate" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "moderate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 150

Level 5

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. At the meeting, Maya says, "Let's approve it only if the plan is qualified." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "qualified"	**B.** "approve it"
C. "weighing a proposal"	**D.** "the plan"

Answer: A. The word "qualified" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "qualified" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "qualified" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 151

Level 5

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. At the meeting, Sam says, "Let's approve it only if the plan is substantial." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "approve it"	**B.** "substantial"
C. "the plan"	**D.** "aimed at support agents"

Answer: B. The word "substantial" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "substantial" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Correct. "substantial" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 152

Level 5

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. At the meeting, Avery says, "Let's approve it only if the plan is clean." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "aimed at local homeowners"	**B.** "the plan"
C. "clean"	**D.** "weighing a proposal"

Answer: C. The word "clean" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "clean" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "clean" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 153

Level 5

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. At the meeting, Taylor says, "Let's approve it only if the plan is secure." Which word or phrase needs a clearer meaning before people can judge what Taylor means?

A. "the plan"	**B.** "aimed at patrol officers"
C. "approve it"	**D.** "secure"

Answer: D. The word "secure" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "secure" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Correct. "secure" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Question 154

Level 5

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. At the meeting, Morgan says, "Let's approve it only if the plan is balanced." Which word or phrase needs a clearer meaning before people can judge what Morgan means?

A. "balanced"	**B.** "approve it"
C. "weighing a proposal"	**D.** "the plan"

Answer: A. The word "balanced" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "balanced" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "balanced" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

C. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 155

Level 5

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. At the meeting, Casey says, "Let's approve it only if the plan is urgent." Which word or phrase needs a clearer meaning before people can judge what Casey means?

A. "weighing a proposal"	**B.** "urgent"
C. "the plan"	**D.** "approve it"

Answer: B. The word "urgent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "urgent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

B. Correct. "urgent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 156

Level 5

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. At the meeting, Jordan says, "Let's approve it only if the plan is independent." Which word or phrase needs a clearer meaning before people can judge what Jordan means?

A. "approve it"	**B.** "aimed at new gym members"
C. "independent"	**D.** "the plan"

Answer: C. The word "independent" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "independent" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Correct. "independent" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

Question 157

Level 5

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. At the meeting, Riley says, "Let's approve it only if the plan is diverse." Which word or phrase needs a clearer meaning before people can judge what Riley means?

A. "the plan"	**B.** "diverse"
C. "aimed at auto-insurance policyholders"	**D.** "approve it"

Answer: B. The word "diverse" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is B because "diverse" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

B. Correct. "diverse" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

Question 158

Level 5

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. At the meeting, Maya says, "Let's approve it only if the plan is efficient." Which word or phrase needs a clearer meaning before people can judge what Maya means?

A. "approve it"	**B.** "the plan"
C. "efficient"	**D.** "aimed at newsletter readers"

Answer: C. The word "efficient" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is C because "efficient" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. The plan has already been named in the setup. The problem is the vague judging word attached to the plan.

C. Correct. "efficient" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

D. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

Question 159

Level 5

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. At the meeting, Sam says, "Let's approve it only if the plan is appropriate." Which word or phrase needs a clearer meaning before people can judge what Sam means?

A. "appropriate"	**B.** "aimed at weekend farmers market shoppers"
C. "approve it"	**D.** "weighing a proposal"

Answer: A. The word "appropriate" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is A because "appropriate" is the wording that needs a clear boundary before the argument can be judged.

A. Correct. "appropriate" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

B. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

C. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

D. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

Question 160

Level 5

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. At the meeting, Avery says, "Let's approve it only if the plan is meaningful." Which word or phrase needs a clearer meaning before people can judge what Avery means?

A. "approve it"	**B.** "weighing a proposal"
C. "aimed at overnight hotel guests"	**D.** "meaningful"

Answer: D. The word "meaningful" is vague here. People need a clear definition before they can tell whether the plan meets the rule.

How to work it out. To uncover the answer, look for the term that sets a standard without defining the standard. The correct choice is D because "meaningful" is the wording that needs a clear boundary before the argument can be judged.

A. Not correct. People know what approving a proposal means. The unclear part is the standard that decides when approval should happen.

B. Not correct. This phrase describes the meeting context. It is not the slippery word people need to define.

C. Not correct. This phrase identifies the group or proposal, but it does not set an unclear standard for judging the plan.

D. Correct. "meaningful" is the word doing the unclear work. Until people define it, they cannot tell what standard the plan has to meet.

Skill 03

Find the Argument

What's the Argument?

Find the conclusion, reason, evidence, example, or side comment. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What role does each sentence play in the argument?
Why it matters	Arguments are built from parts: conclusion, reason, background, example, and side comment. Naming those parts keeps readers from treating every sentence as equally important.
Conceptual core	Finding the argument means mapping the relationship among sentences. Students learn to distinguish conclusion, reason, evidence, example, context, and irrelevant detail. This is a structural skill: the same sentence can be evidence in one argument and conclusion in another. The key is the job it performs in the immediate passage.
Student method	Ask which sentence is being supported, then ask which sentence does the supporting. Conclusion indicators such as therefore help, but the real test is the role the sentence plays.
Analogy	An argument is like a table: the conclusion is the tabletop, and the reasons are the legs. Background facts may be in the room, but they are not holding the table up.
Assessment focus	A good answer identifies the conclusion, reason, or other requested role without being pulled toward the most interesting sentence.

Teaching Sequence

1. Identify the sentence that other sentences are meant to support.

2. Mark evidence or reasons that point toward that conclusion.

3. Treat examples as illustrations unless they are the main point being defended.

4. Ignore signal words if the sentence's actual role points the other way.

Common Confusions To Watch For

1. Students often treat the first fact as the conclusion because it appears first.

2. Students may mistake a topic sentence for an argued conclusion.

3. Students may choose a true background statement even when it is not doing argumentative work.

Teacher Prompts

1. Which sentence answers 'so what should we believe or do?'

2. Which sentence answers 'why should we believe that?'

3. If we removed this sentence, would the argument lose its support, its conclusion, or only some background?

Worked Example

Scenario	A school club says its bake sale raised more money than the car wash, so next month the club should run another bake sale.
Teacher think-aloud	The money comparison supports the recommendation. The conclusion is the action the club should take. The topic is fundraising, but the argument is the move from past result to future plan.
Student takeaway	The conclusion is the supported point; the reason is the support.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A club member writes: 'Our club meets on Tuesdays. Last month's bake sale earned $300 after costs, while the car wash earned $180. Therefore, we should hold another bake sale next month.'

What To Do

1. Label each sentence background, reason, or conclusion.

2. Draw an arrow from the reason to the conclusion, or write 'reason -> conclusion' using the actual sentences.

3. Explain in one sentence why the Tuesday meeting detail is not support for the fundraising recommendation.

Check before reading the answer. Does your arrow show which statement supports which? The most detailed sentence need not be the conclusion.

Model Answer

Tuesday meetings are background. The $300 versus $180 earnings comparison is the reason. Holding another bake sale is the conclusion. Draw the arrow from the earnings comparison to the recommendation. Meeting on Tuesday supplies no comparison of the two fundraising options.

Why it is adequate. The answer maps the argument's structure and explains why a true detail is not necessarily a reason.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

At a meeting about evening bus service for late-shift workers, Riley says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Riley's conclusion?

A. The city council should extend evening bus service until midnight.	**B.** The new buses were repainted blue.
C. The proposal is meant mainly for late-shift workers.	**D.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.

Answer: A. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The city council should extend evening bus service until midnight. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 2

Level 1

At a meeting about classroom phone lockers, Maya says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for ninth-grade students.	**B.** The school board should require phone lockers during class.
C. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.	**D.** The lockers are installed near the gym.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The school board should require phone lockers during class. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 3

Level 1

At a meeting about medication reminder texts for older patients, Sam says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Sam's conclusion?

A. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.	**B.** The text messages use a green pill icon.
C. The hospital should send medication reminder texts before evening doses.	**D.** The proposal is meant mainly for patients over 60.

Answer: C. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The hospital should send medication reminder texts before evening doses. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 4

Level 1

At a meeting about a four-day workweek test for software engineers, Avery says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Avery's conclusion?

A. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**B.** The test calendar starts on a Monday.
C. The proposal is meant mainly for software engineers.	**D.** The company should test a Monday-through-Thursday workweek.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The company should test a Monday-through-Thursday workweek. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 5

Level 1

At a meeting about larger grocery unit-price labels, Taylor says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Taylor's conclusion?

A. The grocery chain should add larger unit-price labels on shelf tags.	**B.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.
C. The shelf labels use bold black numbers.	**D.** The proposal is meant mainly for weekly grocery shoppers.

Answer: A. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The grocery chain should add larger unit-price labels on shelf tags. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 6

Level 1

At a meeting about late fines on children's books, Morgan says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Morgan's conclusion?

A. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.	**B.** The library should waive late fines for children's books.
C. The children's-book checkout desk moved six feet.	**D.** The proposal is meant mainly for families checking out children's books.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The library should waive late fines for children's books. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 7

Level 1

At a meeting about two-factor login for site administrators, Casey says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for site administrators.	**B.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.
C. The platform should require two-factor login for site administrators.	**D.** The login button changed from green to blue.

Answer: C. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The platform should require two-factor login for site administrators. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 8

Level 1

At a meeting about brighter streetlights on Maple Street, Jordan says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Jordan's conclusion?

A. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.	**B.** The proposal is meant mainly for residents on Maple Street.
C. The new light poles are made of aluminum.	**D.** The neighborhood association should add brighter LED streetlights on Maple Street.

Answer: D. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The neighborhood association should add brighter LED streetlights on Maple Street. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 9

Level 1

At a meeting about peer tutoring for first-year statistics students, Riley says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Riley's conclusion?

A. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.	**B.** The proposal is meant mainly for first-year statistics students.
C. The university should expand peer tutoring in statistics.	**D.** The tutoring room has new chairs.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The university should expand peer tutoring in statistics. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 10

Level 1

At a meeting about calorie labels on restaurant menus, Maya says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for lunch customers.	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.
C. The lunch menus are printed on thicker paper.	**D.** The restaurant group should show calorie labels on printed lunch menus.

Answer: D. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The restaurant group should show calorie labels on printed lunch menus. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 11

Level 1

At a meeting about bank overdraft warning texts, Sam says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Sam's conclusion?

A. The warning texts arrive from a short code.	**B.** The proposal is meant mainly for checking-account customers.
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**D.** The bank should send overdraft warning texts before fees post.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The bank should send overdraft warning texts before fees post. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 12

Level 1

At a meeting about timed-entry passes for weekend park trails, Avery says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Avery's conclusion?

A. The digital passes include a small trail map.	**B.** The park service should use timed-entry passes for weekend trail visits.
C. The proposal is meant mainly for weekend trail hikers.	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 13

Level 1

At a meeting about free Friday museum admission, Taylor says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Taylor's conclusion?

A. The Friday tickets are scanned at the east door.	**B.** The proposal is meant mainly for local families.
C. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.	**D.** The museum should offer free admission on Fridays.

Answer: D. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The museum should offer free admission on Fridays. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 14

Level 1

At a meeting about youth soccer concussion checks, Morgan says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Morgan's conclusion?

A. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.	**B.** The concussion checklist is printed on yellow paper.
C. The sports league should add mandatory sideline concussion checks.	**D.** The proposal is meant mainly for youth soccer players.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The sports league should add mandatory sideline concussion checks. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 15

Level 1

At a meeting about same-day donation receipts, Casey says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Casey's conclusion?

A. The receipt email subject line changed.	**B.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.
C. The proposal is meant mainly for first-time donors.	**D.** The nonprofit should send donation receipts within one day.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The nonprofit should send donation receipts within one day. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 16

Level 1

At a meeting about warehouse ergonomic training, Jordan says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Jordan's conclusion?

A. The training room has a ceiling-mounted projector.	**B.** The warehouse should offer monthly lifting-safety and ergonomic training.
C. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.	**D.** The proposal is meant mainly for warehouse staff.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The warehouse should offer monthly lifting-safety and ergonomic training. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 17

Level 1

At a meeting about apartment-lobby compost bins, Riley says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Riley's conclusion?

A. The lobby compost bins have foot pedals.	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.
C. The proposal is meant mainly for apartment residents.	**D.** The city sanitation office should place compost bins in apartment lobbies.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The city sanitation office should place compost bins in apartment lobbies. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 18

Level 1

At a meeting about private-by-default app profiles, Maya says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Maya's conclusion?

A. The privacy screen uses a shield icon.	**B.** The app maker should make new user profiles private by default.
C. The proposal is meant mainly for new app users.	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The app maker should make new user profiles private by default. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 19

Level 1

At a meeting about same-day clinic appointment slots, Sam says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for primary-care patients.	**B.** The clinic should reserve same-day appointment slots.
C. The appointment cards are white.	**D.** A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.

Answer: B. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The clinic should reserve same-day appointment slots. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 20

Level 1

At a meeting about seat-zone airline boarding, Avery says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Avery's conclusion?

A. The airline should board passengers by seat zone.	**B.** The gate signs are backlit.
C. The proposal is meant mainly for domestic flight passengers.	**D.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.

Answer: A. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The airline should board passengers by seat zone. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 21

Level 1

At a meeting about an online apartment repair portal, Taylor says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Taylor's conclusion?

A. The repair portal uses a house logo.	**B.** The proposal is meant mainly for apartment tenants.
C. The landlord should launch an online apartment repair portal.	**D.** A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The landlord should launch an online apartment repair portal. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 22

Level 1

At a meeting about fruit placement in a school cafeteria line, Morgan says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Morgan's conclusion?

A. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.	**B.** The fruit bowls are ceramic.
C. The proposal is meant mainly for middle-school students.	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line.

Answer: D. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The cafeteria should move fruit bowls to the front of the cafeteria line. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 23

Level 1

At a meeting about weekly call-center script coaching, Casey says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Casey's conclusion?

A. The call center should give support agents weekly script coaching.	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.
C. The proposal is meant mainly for support agents.	**D.** The coaching slides use blue headers.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The call center should give support agents weekly script coaching. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 24

Level 1

At a meeting about household water-leak alerts, Jordan says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Jordan's conclusion?

A. The water-leak alert screen includes a blue droplet icon.	**B.** The water utility should send automatic household water-leak alerts.
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.	**D.** The proposal is meant mainly for local homeowners.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The water utility should send automatic household water-leak alerts. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 25

Level 1

At a meeting about body-camera activation reminders, Riley says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Riley's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts.	**B.** The reminder tone is two beeps.
C. The proposal is meant mainly for patrol officers.	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.

Answer: A. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 26

Level 1

At a meeting about county mail-ballot tracking, Maya says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Maya's conclusion?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**B.** The proposal is meant mainly for mail voters.
C. The election office should offer online mail-ballot tracking.	**D.** The ballot-tracking page uses county colors.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The election office should offer online mail-ballot tracking. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 27

Level 1

At a meeting about language-learning spaced-review prompts, Sam says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Sam's conclusion?

A. The tutoring app should send spaced-review prompts for language vocabulary.	**B.** The proposal is meant mainly for language learners.
C. The review prompts use a bell icon.	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The tutoring app should send spaced-review prompts for language vocabulary. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 28

Level 1

At a meeting about a beginner gym orientation, Avery says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for new gym members.	**B.** The orientation mats are black.
C. The gym should offer a beginner gym orientation.	**D.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.

Answer: C. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The gym should offer a beginner gym orientation. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 29

Level 1

At a meeting about safe-driving feedback for policyholders, Taylor says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Taylor's conclusion?

A. The insurer should send weekly safe-driving feedback.	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.
C. The proposal is meant mainly for auto-insurance policyholders.	**D.** The feedback dashboard uses star ratings.

Answer: A. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 30

Level 1

At a meeting about top-of-article correction boxes, Morgan says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for newsletter readers.	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.
C. The newsroom should place corrections at the top of articles.	**D.** The correction box has a gray border.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The newsroom should place corrections at the top of articles. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 31

Level 1

At a meeting about clearer farmers market price signs, Casey says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Casey's conclusion?

A. The stall price signs are laminated.	**B.** The farmers market should require clearer price signs at vendor stalls.
C. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.	**D.** The proposal is meant mainly for weekend farmers market shoppers.

Answer: B. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The farmers market should require clearer price signs at vendor stalls. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 32

Level 1

At a meeting about hotel quiet-hours text reminders, Jordan says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Jordan's conclusion?

A. The hotel should send quiet-hours text reminders to hotel guests.	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.
C. The quiet-hours text reminder uses a small moon icon.	**D.** The proposal is meant mainly for overnight hotel guests.

Answer: A. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The hotel should send quiet-hours text reminders to hotel guests. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

At a meeting about evening bus service for late-shift workers, Maya says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Maya's conclusion?

A. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**B.** The city council should extend evening bus service until midnight.
C. The proposal is meant mainly for late-shift workers.	**D.** The new buses were repainted blue.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The city council should extend evening bus service until midnight. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 34

Level 2

At a meeting about classroom phone lockers, Sam says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Sam's conclusion?

A. The school board should require phone lockers during class.	**B.** The lockers are installed near the gym.
C. The proposal is meant mainly for ninth-grade students.	**D.** A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The school board should require phone lockers during class. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 35

Level 2

At a meeting about medication reminder texts for older patients, Avery says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for patients over 60.	**B.** A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.
C. The text messages use a green pill icon.	**D.** The hospital should send medication reminder texts before evening doses.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hospital should send medication reminder texts before evening doses. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 36

Level 2

At a meeting about a four-day workweek test for software engineers, Taylor says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Taylor's conclusion?

A. The test calendar starts on a Monday.	**B.** The proposal is meant mainly for software engineers.
C. The company should test a Monday-through-Thursday workweek.	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The company should test a Monday-through-Thursday workweek. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 37

Level 2

At a meeting about larger grocery unit-price labels, Morgan says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Morgan's conclusion?

A. The shelf labels use bold black numbers.	**B.** The grocery chain should add larger unit-price labels on shelf tags.
C. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.	**D.** The proposal is meant mainly for weekly grocery shoppers.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The grocery chain should add larger unit-price labels on shelf tags. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 38

Level 2

At a meeting about late fines on children's books, Casey says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Casey's conclusion?

A. The library should waive late fines for children's books.	**B.** The children's-book checkout desk moved six feet.
C. The proposal is meant mainly for families checking out children's books.	**D.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The library should waive late fines for children's books. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 39

Level 2

At a meeting about two-factor login for site administrators, Jordan says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Jordan's conclusion?

A. The login button changed from green to blue.	**B.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.
C. The proposal is meant mainly for site administrators.	**D.** The platform should require two-factor login for site administrators.

Answer: D. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The platform should require two-factor login for site administrators. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 40

Level 2

At a meeting about brighter streetlights on Maple Street, Riley says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Riley's conclusion?

A. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.	**B.** The proposal is meant mainly for residents on Maple Street.
C. The neighborhood association should add brighter LED streetlights on Maple Street.	**D.** The new light poles are made of aluminum.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The neighborhood association should add brighter LED streetlights on Maple Street. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 41

Level 2

At a meeting about peer tutoring for first-year statistics students, Maya says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for first-year statistics students.	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.
C. The tutoring room has new chairs.	**D.** The university should expand peer tutoring in statistics.

Answer: D. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The university should expand peer tutoring in statistics. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 42

Level 2

At a meeting about calorie labels on restaurant menus, Sam says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for lunch customers.	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.
C. The restaurant group should show calorie labels on printed lunch menus.	**D.** The lunch menus are printed on thicker paper.

Answer: C. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The restaurant group should show calorie labels on printed lunch menus. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 43

Level 2

At a meeting about bank overdraft warning texts, Avery says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Avery's conclusion?

A. The bank should send overdraft warning texts before fees post.	**B.** The warning texts arrive from a short code.
C. The proposal is meant mainly for checking-account customers.	**D.** A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.

Answer: A. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The bank should send overdraft warning texts before fees post. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 44

Level 2

At a meeting about timed-entry passes for weekend park trails, Taylor says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Taylor's conclusion?

A. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.	**B.** The park service should use timed-entry passes for weekend trail visits.
C. The proposal is meant mainly for weekend trail hikers.	**D.** The digital passes include a small trail map.

Answer: B. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 45

Level 2

At a meeting about free Friday museum admission, Morgan says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Morgan's conclusion?

A. The Friday tickets are scanned at the east door.	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.
C. The museum should offer free admission on Fridays.	**D.** The proposal is meant mainly for local families.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The museum should offer free admission on Fridays. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 46

Level 2

At a meeting about youth soccer concussion checks, Casey says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Casey's conclusion?

A. The concussion checklist is printed on yellow paper.	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.
C. The proposal is meant mainly for youth soccer players.	**D.** The sports league should add mandatory sideline concussion checks.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The sports league should add mandatory sideline concussion checks. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 47

Level 2

At a meeting about same-day donation receipts, Jordan says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Jordan's conclusion?

A. The nonprofit should send donation receipts within one day.	**B.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.
C. The proposal is meant mainly for first-time donors.	**D.** The receipt email subject line changed.

Answer: A. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The nonprofit should send donation receipts within one day. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 48

Level 2

At a meeting about warehouse ergonomic training, Riley says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Riley's conclusion?

A. The training room has a ceiling-mounted projector.	**B.** The warehouse should offer monthly lifting-safety and ergonomic training.
C. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.	**D.** The proposal is meant mainly for warehouse staff.

Answer: B. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The warehouse should offer monthly lifting-safety and ergonomic training. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 49

Level 2

At a meeting about apartment-lobby compost bins, Maya says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Maya's conclusion?

A. The lobby compost bins have foot pedals.	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.
C. The city sanitation office should place compost bins in apartment lobbies.	**D.** The proposal is meant mainly for apartment residents.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city sanitation office should place compost bins in apartment lobbies. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 50

Level 2

At a meeting about private-by-default app profiles, Sam says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Sam's conclusion?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.	**B.** The privacy screen uses a shield icon.
C. The proposal is meant mainly for new app users.	**D.** The app maker should make new user profiles private by default.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The app maker should make new user profiles private by default. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 51

Level 2

At a meeting about same-day clinic appointment slots, Avery says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Avery's conclusion?

A. The clinic should reserve same-day appointment slots.	**B.** A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.
C. The appointment cards are white.	**D.** The proposal is meant mainly for primary-care patients.

Answer: A. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The clinic should reserve same-day appointment slots. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 52

Level 2

At a meeting about seat-zone airline boarding, Taylor says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Taylor's conclusion?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.	**B.** The airline should board passengers by seat zone.
C. The proposal is meant mainly for domestic flight passengers.	**D.** The gate signs are backlit.

Answer: B. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The airline should board passengers by seat zone. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 53

Level 2

At a meeting about an online apartment repair portal, Morgan says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Morgan's conclusion?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.	**B.** The landlord should launch an online apartment repair portal.
C. The repair portal uses a house logo.	**D.** The proposal is meant mainly for apartment tenants.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The landlord should launch an online apartment repair portal. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 54

Level 2

At a meeting about fruit placement in a school cafeteria line, Casey says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Casey's conclusion?

A. The cafeteria should move fruit bowls to the front of the cafeteria line.	**B.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.
C. The fruit bowls are ceramic.	**D.** The proposal is meant mainly for middle-school students.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The cafeteria should move fruit bowls to the front of the cafeteria line. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 55

Level 2

At a meeting about weekly call-center script coaching, Jordan says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Jordan's conclusion?

A. The coaching slides use blue headers.	**B.** The proposal is meant mainly for support agents.
C. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.	**D.** The call center should give support agents weekly script coaching.

Answer: D. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The call center should give support agents weekly script coaching. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 56

Level 2

At a meeting about household water-leak alerts, Riley says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Riley's conclusion?

A. The water-leak alert screen includes a blue droplet icon.	**B.** The proposal is meant mainly for local homeowners.
C. The water utility should send automatic household water-leak alerts.	**D.** A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The water utility should send automatic household water-leak alerts. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 57

Level 2

At a meeting about body-camera activation reminders, Maya says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for patrol officers.	**B.** The police department should send body-camera activation reminders before patrol shifts.
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**D.** The reminder tone is two beeps.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The police department should send body-camera activation reminders before patrol shifts. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 58

Level 2

At a meeting about county mail-ballot tracking, Sam says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Sam's conclusion?

A. The election office should offer online mail-ballot tracking.	**B.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.
C. The proposal is meant mainly for mail voters.	**D.** The ballot-tracking page uses county colors.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The election office should offer online mail-ballot tracking. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 59

Level 2

At a meeting about language-learning spaced-review prompts, Avery says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for language learners.	**B.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.
C. The review prompts use a bell icon.	**D.** The tutoring app should send spaced-review prompts for language vocabulary.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The tutoring app should send spaced-review prompts for language vocabulary. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 60

Level 2

At a meeting about a beginner gym orientation, Taylor says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Taylor's conclusion?

A. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.	**B.** The proposal is meant mainly for new gym members.
C. The gym should offer a beginner gym orientation.	**D.** The orientation mats are black.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The gym should offer a beginner gym orientation. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 61

Level 2

At a meeting about safe-driving feedback for policyholders, Morgan says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for auto-insurance policyholders.	**B.** The insurer should send weekly safe-driving feedback.
C. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.	**D.** The feedback dashboard uses star ratings.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The insurer should send weekly safe-driving feedback. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 62

Level 2

At a meeting about top-of-article correction boxes, Casey says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Casey's conclusion?

A. The newsroom should place corrections at the top of articles.	**B.** The correction box has a gray border.
C. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.	**D.** The proposal is meant mainly for newsletter readers.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The newsroom should place corrections at the top of articles. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 63

Level 2

At a meeting about clearer farmers market price signs, Jordan says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for weekend farmers market shoppers.	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.
C. The farmers market should require clearer price signs at vendor stalls.	**D.** The stall price signs are laminated.

Answer: C. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The farmers market should require clearer price signs at vendor stalls. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 64

Level 2

At a meeting about hotel quiet-hours text reminders, Riley says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Riley's conclusion?

A. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.	**B.** The quiet-hours text reminder uses a small moon icon.
C. The proposal is meant mainly for overnight hotel guests.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hotel should send quiet-hours text reminders to hotel guests. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

At a meeting about evening bus service for late-shift workers, Sam says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for late-shift workers.	**B.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.
C. The city council should extend evening bus service until midnight.	**D.** The new buses were repainted blue.

Answer: C. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city council should extend evening bus service until midnight. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 66

Level 3

At a meeting about classroom phone lockers, Avery says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Avery's conclusion?

A. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.	**B.** The lockers are installed near the gym.
C. The proposal is meant mainly for ninth-grade students.	**D.** The school board should require phone lockers during class.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The school board should require phone lockers during class. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 67

Level 3

At a meeting about medication reminder texts for older patients, Taylor says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Taylor's conclusion?

A. The text messages use a green pill icon.	**B.** The proposal is meant mainly for patients over 60.
C. The hospital should send medication reminder texts before evening doses.	**D.** A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The hospital should send medication reminder texts before evening doses. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 68

Level 3

At a meeting about a four-day workweek test for software engineers, Morgan says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Morgan's conclusion?

A. The company should test a Monday-through-Thursday workweek.	**B.** The test calendar starts on a Monday.
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**D.** The proposal is meant mainly for software engineers.

Answer: A. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The company should test a Monday-through-Thursday workweek. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 69

Level 3

At a meeting about larger grocery unit-price labels, Casey says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for weekly grocery shoppers.	**B.** The shelf labels use bold black numbers.
C. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.	**D.** The grocery chain should add larger unit-price labels on shelf tags.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The grocery chain should add larger unit-price labels on shelf tags. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 70

Level 3

At a meeting about late fines on children's books, Jordan says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Jordan's conclusion?

A. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.	**B.** The library should waive late fines for children's books.
C. The children's-book checkout desk moved six feet.	**D.** The proposal is meant mainly for families checking out children's books.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The library should waive late fines for children's books. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 71

Level 3

At a meeting about two-factor login for site administrators, Riley says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Riley's conclusion?

A. The proposal is meant mainly for site administrators.	**B.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.
C. The login button changed from green to blue.	**D.** The platform should require two-factor login for site administrators.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The platform should require two-factor login for site administrators. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 72

Level 3

At a meeting about brighter streetlights on Maple Street, Maya says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Maya's conclusion?

A. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.	**B.** The neighborhood association should add brighter LED streetlights on Maple Street.
C. The proposal is meant mainly for residents on Maple Street.	**D.** The new light poles are made of aluminum.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The neighborhood association should add brighter LED streetlights on Maple Street. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 73

Level 3

At a meeting about peer tutoring for first-year statistics students, Sam says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Sam's conclusion?

A. The tutoring room has new chairs.	**B.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.
C. The proposal is meant mainly for first-year statistics students.	**D.** The university should expand peer tutoring in statistics.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The university should expand peer tutoring in statistics. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 74

Level 3

At a meeting about calorie labels on restaurant menus, Avery says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Avery's conclusion?

A. The lunch menus are printed on thicker paper.	**B.** The restaurant group should show calorie labels on printed lunch menus.
C. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.	**D.** The proposal is meant mainly for lunch customers.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The restaurant group should show calorie labels on printed lunch menus. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 75

Level 3

At a meeting about bank overdraft warning texts, Taylor says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Taylor's conclusion?

A. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**B.** The bank should send overdraft warning texts before fees post.
C. The proposal is meant mainly for checking-account customers.	**D.** The warning texts arrive from a short code.

Answer: B. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The bank should send overdraft warning texts before fees post. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 76

Level 3

At a meeting about timed-entry passes for weekend park trails, Morgan says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Morgan's conclusion?

A. The park service should use timed-entry passes for weekend trail visits.	**B.** The proposal is meant mainly for weekend trail hikers.
C. The digital passes include a small trail map.	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.

Answer: A. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The park service should use timed-entry passes for weekend trail visits. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 77

Level 3

At a meeting about free Friday museum admission, Casey says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Casey's conclusion?

A. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.	**B.** The Friday tickets are scanned at the east door.
C. The proposal is meant mainly for local families.	**D.** The museum should offer free admission on Fridays.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The museum should offer free admission on Fridays. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 78

Level 3

At a meeting about youth soccer concussion checks, Jordan says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Jordan's conclusion?

A. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.	**B.** The proposal is meant mainly for youth soccer players.
C. The sports league should add mandatory sideline concussion checks.	**D.** The concussion checklist is printed on yellow paper.

Answer: C. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The sports league should add mandatory sideline concussion checks. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 79

Level 3

At a meeting about same-day donation receipts, Riley says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Riley's conclusion?

A. The receipt email subject line changed.	**B.** The nonprofit should send donation receipts within one day.
C. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.	**D.** The proposal is meant mainly for first-time donors.

Answer: B. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The nonprofit should send donation receipts within one day. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 80

Level 3

At a meeting about warehouse ergonomic training, Maya says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Maya's conclusion?

A. The warehouse should offer monthly lifting-safety and ergonomic training.	**B.** The proposal is meant mainly for warehouse staff.
C. The training room has a ceiling-mounted projector.	**D.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.

Answer: A. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The warehouse should offer monthly lifting-safety and ergonomic training. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 81

Level 3

At a meeting about apartment-lobby compost bins, Sam says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for apartment residents.	**B.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.
C. The lobby compost bins have foot pedals.	**D.** The city sanitation office should place compost bins in apartment lobbies.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The city sanitation office should place compost bins in apartment lobbies. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 82

Level 3

At a meeting about private-by-default app profiles, Avery says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for new app users.	**B.** The privacy screen uses a shield icon.
C. The app maker should make new user profiles private by default.	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.

Answer: C. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The app maker should make new user profiles private by default. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 83

Level 3

At a meeting about same-day clinic appointment slots, Taylor says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Taylor's conclusion?

A. The proposal is meant mainly for primary-care patients.	**B.** The appointment cards are white.
C. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**D.** The clinic should reserve same-day appointment slots.

Answer: D. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The clinic should reserve same-day appointment slots. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 84

Level 3

At a meeting about seat-zone airline boarding, Morgan says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Morgan's conclusion?

A. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.	**B.** The gate signs are backlit.
C. The airline should board passengers by seat zone.	**D.** The proposal is meant mainly for domestic flight passengers.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The airline should board passengers by seat zone. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 85

Level 3

At a meeting about an online apartment repair portal, Casey says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for apartment tenants.	**B.** A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.
C. The landlord should launch an online apartment repair portal.	**D.** The repair portal uses a house logo.

Answer: C. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The landlord should launch an online apartment repair portal. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 86

Level 3

At a meeting about fruit placement in a school cafeteria line, Jordan says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Jordan's conclusion?

A. The cafeteria should move fruit bowls to the front of the cafeteria line.	**B.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.
C. The proposal is meant mainly for middle-school students.	**D.** The fruit bowls are ceramic.

Answer: A. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The cafeteria should move fruit bowls to the front of the cafeteria line. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 87

Level 3

At a meeting about weekly call-center script coaching, Riley says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Riley's conclusion?

A. The coaching slides use blue headers.	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.
C. The call center should give support agents weekly script coaching.	**D.** The proposal is meant mainly for support agents.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The call center should give support agents weekly script coaching. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 88

Level 3

At a meeting about household water-leak alerts, Maya says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Maya's conclusion?

A. The water utility should send automatic household water-leak alerts.	**B.** The proposal is meant mainly for local homeowners.
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: A. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The water utility should send automatic household water-leak alerts. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 89

Level 3

At a meeting about body-camera activation reminders, Sam says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Sam's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts.	**B.** The reminder tone is two beeps.
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**D.** The proposal is meant mainly for patrol officers.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 90

Level 3

At a meeting about county mail-ballot tracking, Avery says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Avery's conclusion?

A. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**B.** The election office should offer online mail-ballot tracking.
C. The ballot-tracking page uses county colors.	**D.** The proposal is meant mainly for mail voters.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The election office should offer online mail-ballot tracking. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 91

Level 3

At a meeting about language-learning spaced-review prompts, Taylor says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Taylor's conclusion?

A. The review prompts use a bell icon.	**B.** The proposal is meant mainly for language learners.
C. The tutoring app should send spaced-review prompts for language vocabulary.	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The tutoring app should send spaced-review prompts for language vocabulary. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 92

Level 3

At a meeting about a beginner gym orientation, Morgan says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Morgan's conclusion?

A. The gym should offer a beginner gym orientation.	**B.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.
C. The proposal is meant mainly for new gym members.	**D.** The orientation mats are black.

Answer: A. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The gym should offer a beginner gym orientation. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 93

Level 3

At a meeting about safe-driving feedback for policyholders, Casey says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Casey's conclusion?

A. The insurer should send weekly safe-driving feedback.	**B.** The proposal is meant mainly for auto-insurance policyholders.
C. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.	**D.** The feedback dashboard uses star ratings.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 94

Level 3

At a meeting about top-of-article correction boxes, Jordan says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for newsletter readers.	**B.** The newsroom should place corrections at the top of articles.
C. The correction box has a gray border.	**D.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The newsroom should place corrections at the top of articles. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 95

Level 3

At a meeting about clearer farmers market price signs, Riley says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Riley's conclusion?

A. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.	**B.** The farmers market should require clearer price signs at vendor stalls.
C. The stall price signs are laminated.	**D.** The proposal is meant mainly for weekend farmers market shoppers.

Answer: B. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The farmers market should require clearer price signs at vendor stalls. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 96

Level 3

At a meeting about hotel quiet-hours text reminders, Maya says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Maya's conclusion?

A. The quiet-hours text reminder uses a small moon icon.	**B.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.
C. The proposal is meant mainly for overnight hotel guests.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hotel should send quiet-hours text reminders to hotel guests. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

At a meeting about evening bus service for late-shift workers, Avery says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for late-shift workers.	**B.** The new buses were repainted blue.
C. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.	**D.** The city council should extend evening bus service until midnight.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The city council should extend evening bus service until midnight. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 98

Level 4

At a meeting about classroom phone lockers, Taylor says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Taylor's conclusion?

A. The proposal is meant mainly for ninth-grade students.	**B.** The lockers are installed near the gym.
C. The school board should require phone lockers during class.	**D.** A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The school board should require phone lockers during class. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 99

Level 4

At a meeting about medication reminder texts for older patients, Morgan says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Morgan's conclusion?

A. The text messages use a green pill icon.	**B.** The hospital should send medication reminder texts before evening doses.
C. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.	**D.** The proposal is meant mainly for patients over 60.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The hospital should send medication reminder texts before evening doses. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 100

Level 4

At a meeting about a four-day workweek test for software engineers, Casey says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Casey's conclusion?

A. The company should test a Monday-through-Thursday workweek.	**B.** The test calendar starts on a Monday.
C. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.	**D.** The proposal is meant mainly for software engineers.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The company should test a Monday-through-Thursday workweek. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 101

Level 4

At a meeting about larger grocery unit-price labels, Jordan says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Jordan's conclusion?

A. The shelf labels use bold black numbers.	**B.** The grocery chain should add larger unit-price labels on shelf tags.
C. The proposal is meant mainly for weekly grocery shoppers.	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The grocery chain should add larger unit-price labels on shelf tags. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 102

Level 4

At a meeting about late fines on children's books, Riley says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Riley's conclusion?

A. The proposal is meant mainly for families checking out children's books.	**B.** A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.
C. The children's-book checkout desk moved six feet.	**D.** The library should waive late fines for children's books.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The library should waive late fines for children's books. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 103

Level 4

At a meeting about two-factor login for site administrators, Maya says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Maya's conclusion?

A. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.	**B.** The platform should require two-factor login for site administrators.
C. The proposal is meant mainly for site administrators.	**D.** The login button changed from green to blue.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The platform should require two-factor login for site administrators. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 104

Level 4

At a meeting about brighter streetlights on Maple Street, Sam says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Sam's conclusion?

A. The neighborhood association should add brighter LED streetlights on Maple Street.	**B.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.
C. The new light poles are made of aluminum.	**D.** The proposal is meant mainly for residents on Maple Street.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The neighborhood association should add brighter LED streetlights on Maple Street. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 105

Level 4

At a meeting about peer tutoring for first-year statistics students, Avery says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Avery's conclusion?

A. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.	**B.** The tutoring room has new chairs.
C. The proposal is meant mainly for first-year statistics students.	**D.** The university should expand peer tutoring in statistics.

Answer: D. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The university should expand peer tutoring in statistics. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 106

Level 4

At a meeting about calorie labels on restaurant menus, Taylor says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Taylor's conclusion?

A. The lunch menus are printed on thicker paper.	**B.** A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.
C. The restaurant group should show calorie labels on printed lunch menus.	**D.** The proposal is meant mainly for lunch customers.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The restaurant group should show calorie labels on printed lunch menus. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 107

Level 4

At a meeting about bank overdraft warning texts, Morgan says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Morgan's conclusion?

A. The bank should send overdraft warning texts before fees post.	**B.** The proposal is meant mainly for checking-account customers.
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**D.** The warning texts arrive from a short code.

Answer: A. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The bank should send overdraft warning texts before fees post. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 108

Level 4

At a meeting about timed-entry passes for weekend park trails, Casey says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Casey's conclusion?

A. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.	**B.** The park service should use timed-entry passes for weekend trail visits.
C. The proposal is meant mainly for weekend trail hikers.	**D.** The digital passes include a small trail map.

Answer: B. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 109

Level 4

At a meeting about free Friday museum admission, Jordan says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for local families.	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.
C. The museum should offer free admission on Fridays.	**D.** The Friday tickets are scanned at the east door.

Answer: C. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The museum should offer free admission on Fridays. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 110

Level 4

At a meeting about youth soccer concussion checks, Riley says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Riley's conclusion?

A. The proposal is meant mainly for youth soccer players.	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.
C. The concussion checklist is printed on yellow paper.	**D.** The sports league should add mandatory sideline concussion checks.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The sports league should add mandatory sideline concussion checks. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 111

Level 4

At a meeting about same-day donation receipts, Maya says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for first-time donors.	**B.** The receipt email subject line changed.
C. The nonprofit should send donation receipts within one day.	**D.** A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The nonprofit should send donation receipts within one day. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 112

Level 4

At a meeting about warehouse ergonomic training, Sam says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Sam's conclusion?

A. The warehouse should offer monthly lifting-safety and ergonomic training.	**B.** A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.
C. The proposal is meant mainly for warehouse staff.	**D.** The training room has a ceiling-mounted projector.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The warehouse should offer monthly lifting-safety and ergonomic training. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 113

Level 4

At a meeting about apartment-lobby compost bins, Avery says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Avery's conclusion?

A. The lobby compost bins have foot pedals.	**B.** The proposal is meant mainly for apartment residents.
C. The city sanitation office should place compost bins in apartment lobbies.	**D.** A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.

Answer: C. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city sanitation office should place compost bins in apartment lobbies. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 114

Level 4

At a meeting about private-by-default app profiles, Taylor says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Taylor's conclusion?

A. The app maker should make new user profiles private by default.	**B.** The proposal is meant mainly for new app users.
C. The privacy screen uses a shield icon.	**D.** A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.

Answer: A. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The app maker should make new user profiles private by default. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 115

Level 4

At a meeting about same-day clinic appointment slots, Morgan says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Morgan's conclusion?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**B.** The proposal is meant mainly for primary-care patients.
C. The clinic should reserve same-day appointment slots.	**D.** The appointment cards are white.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The clinic should reserve same-day appointment slots. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 116

Level 4

At a meeting about seat-zone airline boarding, Casey says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Casey's conclusion?

A. The airline should board passengers by seat zone.	**B.** A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.
C. The gate signs are backlit.	**D.** The proposal is meant mainly for domestic flight passengers.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The airline should board passengers by seat zone. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 117

Level 4

At a meeting about an online apartment repair portal, Jordan says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for apartment tenants.	**B.** The landlord should launch an online apartment repair portal.
C. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.	**D.** The repair portal uses a house logo.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The landlord should launch an online apartment repair portal. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 118

Level 4

At a meeting about fruit placement in a school cafeteria line, Riley says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Riley's conclusion?

A. The proposal is meant mainly for middle-school students.	**B.** The fruit bowls are ceramic.
C. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.	**D.** The cafeteria should move fruit bowls to the front of the cafeteria line.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The cafeteria should move fruit bowls to the front of the cafeteria line. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 119

Level 4

At a meeting about weekly call-center script coaching, Maya says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Maya's conclusion?

A. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.	**B.** The call center should give support agents weekly script coaching.
C. The proposal is meant mainly for support agents.	**D.** The coaching slides use blue headers.

Answer: B. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The call center should give support agents weekly script coaching. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 120

Level 4

At a meeting about household water-leak alerts, Sam says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Sam's conclusion?

A. The water utility should send automatic household water-leak alerts.	**B.** The water-leak alert screen includes a blue droplet icon.
C. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.	**D.** The proposal is meant mainly for local homeowners.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The water utility should send automatic household water-leak alerts. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 121

Level 4

At a meeting about body-camera activation reminders, Avery says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Avery's conclusion?

A. The reminder tone is two beeps.	**B.** The police department should send body-camera activation reminders before patrol shifts.
C. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.	**D.** The proposal is meant mainly for patrol officers.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The police department should send body-camera activation reminders before patrol shifts. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 122

Level 4

At a meeting about county mail-ballot tracking, Taylor says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Taylor's conclusion?

A. The ballot-tracking page uses county colors.	**B.** The proposal is meant mainly for mail voters.
C. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.	**D.** The election office should offer online mail-ballot tracking.

Answer: D. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The election office should offer online mail-ballot tracking. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 123

Level 4

At a meeting about language-learning spaced-review prompts, Morgan says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Morgan's conclusion?

A. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.	**B.** The tutoring app should send spaced-review prompts for language vocabulary.
C. The review prompts use a bell icon.	**D.** The proposal is meant mainly for language learners.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The tutoring app should send spaced-review prompts for language vocabulary. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 124

Level 4

At a meeting about a beginner gym orientation, Casey says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for new gym members.	**B.** A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.
C. The orientation mats are black.	**D.** The gym should offer a beginner gym orientation.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The gym should offer a beginner gym orientation. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 125

Level 4

At a meeting about safe-driving feedback for policyholders, Jordan says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Jordan's conclusion?

A. The insurer should send weekly safe-driving feedback.	**B.** A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.
C. The feedback dashboard uses star ratings.	**D.** The proposal is meant mainly for auto-insurance policyholders.

Answer: A. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 126

Level 4

At a meeting about top-of-article correction boxes, Riley says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Riley's conclusion?

A. The proposal is meant mainly for newsletter readers.	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.
C. The newsroom should place corrections at the top of articles.	**D.** The correction box has a gray border.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The newsroom should place corrections at the top of articles. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 127

Level 4

At a meeting about clearer farmers market price signs, Maya says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Maya's conclusion?

A. The stall price signs are laminated.	**B.** The proposal is meant mainly for weekend farmers market shoppers.
C. The farmers market should require clearer price signs at vendor stalls.	**D.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The farmers market should require clearer price signs at vendor stalls. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 128

Level 4

At a meeting about hotel quiet-hours text reminders, Sam says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Sam's conclusion?

A. The quiet-hours text reminder uses a small moon icon.	**B.** The proposal is meant mainly for overnight hotel guests.
C. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.	**D.** The hotel should send quiet-hours text reminders to hotel guests.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The hotel should send quiet-hours text reminders to hotel guests. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

At a meeting about evening bus service for late-shift workers, Taylor says, "The new buses were repainted blue. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Therefore, the city council should extend evening bus service until midnight. The proposal is meant mainly for late-shift workers." Which sentence is Taylor's conclusion?

A. The proposal is meant mainly for late-shift workers.	**B.** The new buses were repainted blue.
C. The city council should extend evening bus service until midnight.	**D.** A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test.

Answer: C. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The city council should extend evening bus service until midnight. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 130

Level 5

At a meeting about classroom phone lockers, Morgan says, "The lockers are installed near the gym. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Therefore, the school board should require phone lockers during class. The proposal is meant mainly for ninth-grade students." Which sentence is Morgan's conclusion?

A. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test.	**B.** The lockers are installed near the gym.
C. The proposal is meant mainly for ninth-grade students.	**D.** The school board should require phone lockers during class.

Answer: D. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The school board should require phone lockers during class. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 131

Level 5

At a meeting about medication reminder texts for older patients, Casey says, "The text messages use a green pill icon. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Therefore, the hospital should send medication reminder texts before evening doses. The proposal is meant mainly for patients over 60." Which sentence is Casey's conclusion?

A. The hospital should send medication reminder texts before evening doses.	**B.** A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test.
C. The text messages use a green pill icon.	**D.** The proposal is meant mainly for patients over 60.

Answer: A. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The hospital should send medication reminder texts before evening doses. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 132

Level 5

At a meeting about a four-day workweek test for software engineers, Jordan says, "The test calendar starts on a Monday. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Therefore, the company should test a Monday-through-Thursday workweek. The proposal is meant mainly for software engineers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for software engineers.	**B.** The company should test a Monday-through-Thursday workweek.
C. The test calendar starts on a Monday.	**D.** A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The company should test a Monday-through-Thursday workweek. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 133

Level 5

At a meeting about larger grocery unit-price labels, Riley says, "The shelf labels use bold black numbers. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Therefore, the grocery chain should add larger unit-price labels on shelf tags. The proposal is meant mainly for weekly grocery shoppers." Which sentence is Riley's conclusion?

A. The shelf labels use bold black numbers.	**B.** The proposal is meant mainly for weekly grocery shoppers.
C. The grocery chain should add larger unit-price labels on shelf tags.	**D.** A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The grocery chain should add larger unit-price labels on shelf tags. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 134

Level 5

At a meeting about late fines on children's books, Maya says, "The children's-book checkout desk moved six feet. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Therefore, the library should waive late fines for children's books. The proposal is meant mainly for families checking out children's books." Which sentence is Maya's conclusion?

A. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test.	**B.** The children's-book checkout desk moved six feet.
C. The proposal is meant mainly for families checking out children's books.	**D.** The library should waive late fines for children's books.

Answer: D. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The library should waive late fines for children's books. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 135

Level 5

At a meeting about two-factor login for site administrators, Sam says, "The login button changed from green to blue. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Therefore, the platform should require two-factor login for site administrators. The proposal is meant mainly for site administrators." Which sentence is Sam's conclusion?

A. The platform should require two-factor login for site administrators.	**B.** The login button changed from green to blue.
C. The proposal is meant mainly for site administrators.	**D.** A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The platform should require two-factor login for site administrators. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 136

Level 5

At a meeting about brighter streetlights on Maple Street, Avery says, "The new light poles are made of aluminum. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Therefore, the neighborhood association should add brighter LED streetlights on Maple Street. The proposal is meant mainly for residents on Maple Street." Which sentence is Avery's conclusion?

A. The proposal is meant mainly for residents on Maple Street.	**B.** The neighborhood association should add brighter LED streetlights on Maple Street.
C. The new light poles are made of aluminum.	**D.** A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The neighborhood association should add brighter LED streetlights on Maple Street. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 137

Level 5

At a meeting about peer tutoring for first-year statistics students, Taylor says, "The tutoring room has new chairs. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Therefore, the university should expand peer tutoring in statistics. The proposal is meant mainly for first-year statistics students." Which sentence is Taylor's conclusion?

A. The university should expand peer tutoring in statistics.	**B.** The tutoring room has new chairs.
C. The proposal is meant mainly for first-year statistics students.	**D.** A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test.

Answer: A. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The university should expand peer tutoring in statistics. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 138

Level 5

At a meeting about calorie labels on restaurant menus, Morgan says, "The lunch menus are printed on thicker paper. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Therefore, the restaurant group should show calorie labels on printed lunch menus. The proposal is meant mainly for lunch customers." Which sentence is Morgan's conclusion?

A. The lunch menus are printed on thicker paper.	**B.** The restaurant group should show calorie labels on printed lunch menus.
C. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test.	**D.** The proposal is meant mainly for lunch customers.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The restaurant group should show calorie labels on printed lunch menus. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 139

Level 5

At a meeting about bank overdraft warning texts, Casey says, "The warning texts arrive from a short code. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Therefore, the bank should send overdraft warning texts before fees post. The proposal is meant mainly for checking-account customers." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for checking-account customers.	**B.** The warning texts arrive from a short code.
C. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test.	**D.** The bank should send overdraft warning texts before fees post.

Answer: D. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The bank should send overdraft warning texts before fees post. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 140

Level 5

At a meeting about timed-entry passes for weekend park trails, Jordan says, "The digital passes include a small trail map. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Therefore, the park service should use timed-entry passes for weekend trail visits. The proposal is meant mainly for weekend trail hikers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for weekend trail hikers.	**B.** The park service should use timed-entry passes for weekend trail visits.
C. The digital passes include a small trail map.	**D.** A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test.

Answer: B. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The park service should use timed-entry passes for weekend trail visits. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 141

Level 5

At a meeting about free Friday museum admission, Riley says, "The Friday tickets are scanned at the east door. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Therefore, the museum should offer free admission on Fridays. The proposal is meant mainly for local families." Which sentence is Riley's conclusion?

A. The Friday tickets are scanned at the east door.	**B.** A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test.
C. The proposal is meant mainly for local families.	**D.** The museum should offer free admission on Fridays.

Answer: D. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The museum should offer free admission on Fridays. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 142

Level 5

At a meeting about youth soccer concussion checks, Maya says, "The concussion checklist is printed on yellow paper. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Therefore, the sports league should add mandatory sideline concussion checks. The proposal is meant mainly for youth soccer players." Which sentence is Maya's conclusion?

A. The proposal is meant mainly for youth soccer players.	**B.** A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test.
C. The sports league should add mandatory sideline concussion checks.	**D.** The concussion checklist is printed on yellow paper.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The sports league should add mandatory sideline concussion checks. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 143

Level 5

At a meeting about same-day donation receipts, Sam says, "The receipt email subject line changed. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Therefore, the nonprofit should send donation receipts within one day. The proposal is meant mainly for first-time donors." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for first-time donors.	**B.** The nonprofit should send donation receipts within one day.
C. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test.	**D.** The receipt email subject line changed.

Answer: B. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The nonprofit should send donation receipts within one day. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 144

Level 5

At a meeting about warehouse ergonomic training, Avery says, "The training room has a ceiling-mounted projector. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Therefore, the warehouse should offer monthly lifting-safety and ergonomic training. The proposal is meant mainly for warehouse staff." Which sentence is Avery's conclusion?

A. The warehouse should offer monthly lifting-safety and ergonomic training.	**B.** The proposal is meant mainly for warehouse staff.
C. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test.	**D.** The training room has a ceiling-mounted projector.

Answer: A. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The warehouse should offer monthly lifting-safety and ergonomic training. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 145

Level 5

At a meeting about apartment-lobby compost bins, Taylor says, "The lobby compost bins have foot pedals. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Therefore, the city sanitation office should place compost bins in apartment lobbies. The proposal is meant mainly for apartment residents." Which sentence is Taylor's conclusion?

A. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test.	**B.** The proposal is meant mainly for apartment residents.
C. The lobby compost bins have foot pedals.	**D.** The city sanitation office should place compost bins in apartment lobbies.

Answer: D. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The city sanitation office should place compost bins in apartment lobbies. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 146

Level 5

At a meeting about private-by-default app profiles, Morgan says, "The privacy screen uses a shield icon. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Therefore, the app maker should make new user profiles private by default. The proposal is meant mainly for new app users." Which sentence is Morgan's conclusion?

A. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test.	**B.** The proposal is meant mainly for new app users.
C. The app maker should make new user profiles private by default.	**D.** The privacy screen uses a shield icon.

Answer: C. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The app maker should make new user profiles private by default. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 147

Level 5

At a meeting about same-day clinic appointment slots, Casey says, "The appointment cards are white. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Therefore, the clinic should reserve same-day appointment slots. The proposal is meant mainly for primary-care patients." Which sentence is Casey's conclusion?

A. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test.	**B.** The clinic should reserve same-day appointment slots.
C. The appointment cards are white.	**D.** The proposal is meant mainly for primary-care patients.

Answer: B. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The clinic should reserve same-day appointment slots. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 148

Level 5

At a meeting about seat-zone airline boarding, Jordan says, "The gate signs are backlit. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Therefore, the airline should board passengers by seat zone. The proposal is meant mainly for domestic flight passengers." Which sentence is Jordan's conclusion?

A. The proposal is meant mainly for domestic flight passengers.	**B.** The gate signs are backlit.
C. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test.	**D.** The airline should board passengers by seat zone.

Answer: D. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The airline should board passengers by seat zone. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 149

Level 5

At a meeting about an online apartment repair portal, Riley says, "The repair portal uses a house logo. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Therefore, the landlord should launch an online apartment repair portal. The proposal is meant mainly for apartment tenants." Which sentence is Riley's conclusion?

A. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test.	**B.** The proposal is meant mainly for apartment tenants.
C. The landlord should launch an online apartment repair portal.	**D.** The repair portal uses a house logo.

Answer: C. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The landlord should launch an online apartment repair portal. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 150

Level 5

At a meeting about fruit placement in a school cafeteria line, Maya says, "The fruit bowls are ceramic. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Therefore, the cafeteria should move fruit bowls to the front of the cafeteria line. The proposal is meant mainly for middle-school students." Which sentence is Maya's conclusion?

A. The cafeteria should move fruit bowls to the front of the cafeteria line.	**B.** The fruit bowls are ceramic.
C. The proposal is meant mainly for middle-school students.	**D.** A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test.

Answer: A. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The cafeteria should move fruit bowls to the front of the cafeteria line. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 151

Level 5

At a meeting about weekly call-center script coaching, Sam says, "The coaching slides use blue headers. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Therefore, the call center should give support agents weekly script coaching. The proposal is meant mainly for support agents." Which sentence is Sam's conclusion?

A. The call center should give support agents weekly script coaching.	**B.** A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test.
C. The coaching slides use blue headers.	**D.** The proposal is meant mainly for support agents.

Answer: A. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The call center should give support agents weekly script coaching. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 152

Level 5

At a meeting about household water-leak alerts, Avery says, "The water-leak alert screen includes a blue droplet icon. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Therefore, the water utility should send automatic household water-leak alerts. The proposal is meant mainly for local homeowners." Which sentence is Avery's conclusion?

A. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test.	**B.** The water utility should send automatic household water-leak alerts.
C. The water-leak alert screen includes a blue droplet icon.	**D.** The proposal is meant mainly for local homeowners.

Answer: B. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The water utility should send automatic household water-leak alerts. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 153

Level 5

At a meeting about body-camera activation reminders, Taylor says, "The reminder tone is two beeps. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Therefore, the police department should send body-camera activation reminders before patrol shifts. The proposal is meant mainly for patrol officers." Which sentence is Taylor's conclusion?

A. The police department should send body-camera activation reminders before patrol shifts.	**B.** The reminder tone is two beeps.
C. The proposal is meant mainly for patrol officers.	**D.** A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test.

Answer: A. The conclusion is Taylor's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The police department should send body-camera activation reminders before patrol shifts. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 154

Level 5

At a meeting about county mail-ballot tracking, Morgan says, "The ballot-tracking page uses county colors. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Therefore, the election office should offer online mail-ballot tracking. The proposal is meant mainly for mail voters." Which sentence is Morgan's conclusion?

A. The proposal is meant mainly for mail voters.	**B.** The election office should offer online mail-ballot tracking.
C. The ballot-tracking page uses county colors.	**D.** A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test.

Answer: B. The conclusion is Morgan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is B: The election office should offer online mail-ballot tracking. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 155

Level 5

At a meeting about language-learning spaced-review prompts, Casey says, "The review prompts use a bell icon. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Therefore, the tutoring app should send spaced-review prompts for language vocabulary. The proposal is meant mainly for language learners." Which sentence is Casey's conclusion?

A. The proposal is meant mainly for language learners.	**B.** The review prompts use a bell icon.
C. The tutoring app should send spaced-review prompts for language vocabulary.	**D.** A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test.

Answer: C. The conclusion is Casey's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The tutoring app should send spaced-review prompts for language vocabulary. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Question 156

Level 5

At a meeting about a beginner gym orientation, Jordan says, "The orientation mats are black. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Therefore, the gym should offer a beginner gym orientation. The proposal is meant mainly for new gym members." Which sentence is Jordan's conclusion?

A. The orientation mats are black.	**B.** The proposal is meant mainly for new gym members.
C. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test.	**D.** The gym should offer a beginner gym orientation.

Answer: D. The conclusion is Jordan's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The gym should offer a beginner gym orientation. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 157

Level 5

At a meeting about safe-driving feedback for policyholders, Riley says, "The feedback dashboard uses star ratings. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Therefore, the insurer should send weekly safe-driving feedback. The proposal is meant mainly for auto-insurance policyholders." Which sentence is Riley's conclusion?

A. The insurer should send weekly safe-driving feedback.	**B.** The proposal is meant mainly for auto-insurance policyholders.
C. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test.	**D.** The feedback dashboard uses star ratings.

Answer: A. The conclusion is Riley's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is A: The insurer should send weekly safe-driving feedback. Treat evidence and background as helpers, not as the conclusion itself.

A. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

D. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

Question 158

Level 5

At a meeting about top-of-article correction boxes, Maya says, "The correction box has a gray border. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Therefore, the newsroom should place corrections at the top of articles. The proposal is meant mainly for newsletter readers." Which sentence is Maya's conclusion?

A. The correction box has a gray border.	**B.** A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test.
C. The newsroom should place corrections at the top of articles.	**D.** The proposal is meant mainly for newsletter readers.

Answer: C. The conclusion is Maya's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The newsroom should place corrections at the top of articles. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

Question 159

Level 5

At a meeting about clearer farmers market price signs, Sam says, "The stall price signs are laminated. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Therefore, the farmers market should require clearer price signs at vendor stalls. The proposal is meant mainly for weekend farmers market shoppers." Which sentence is Sam's conclusion?

A. The proposal is meant mainly for weekend farmers market shoppers.	**B.** A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test.
C. The stall price signs are laminated.	**D.** The farmers market should require clearer price signs at vendor stalls.

Answer: D. The conclusion is Sam's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is D: The farmers market should require clearer price signs at vendor stalls. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

B. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

C. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

D. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

Question 160

Level 5

At a meeting about hotel quiet-hours text reminders, Avery says, "The quiet-hours text reminder uses a small moon icon. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Therefore, the hotel should send quiet-hours text reminders to hotel guests. The proposal is meant mainly for overnight hotel guests." Which sentence is Avery's conclusion?

A. The quiet-hours text reminder uses a small moon icon.	**B.** The proposal is meant mainly for overnight hotel guests.
C. The hotel should send quiet-hours text reminders to hotel guests.	**D.** A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test.

Answer: C. The conclusion is Avery's point. The test result is a reason offered to support it.

How to work it out. To uncover the answer, ask which sentence is being supported by the others. The correct choice is C: The hotel should send quiet-hours text reminders to hotel guests. Treat evidence and background as helpers, not as the conclusion itself.

A. Not correct. This is a background detail. The conclusion is the sentence that follows from the reasons and says what should be accepted.

B. Not correct. This is background about the proposal's audience. It helps set the scene, but it is not the point being argued for.

C. Correct. This sentence is the conclusion: the point being supported. The other sentences are evidence, background, or information about who the proposal is meant to help.

D. Not correct. This sentence gives a reason or evidence. A conclusion is the point that reason is meant to support.

Skill 04

Spot Hidden Assumptions

What's Assumed?

Find the unstated idea the argument needs. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	What unstated idea must be true for the reason to support the conclusion?
Why it matters	Many arguments fail not because a stated sentence is false, but because an unstated bridge is missing. Assumptions are the silent hinges that let a reason swing toward a conclusion.
Conceptual core	An assumption is not merely something unstated; it is an unstated bridge the argument needs. Students should learn to avoid both extremes: choosing an assumption so broad it would make almost any argument work, or choosing a detail that is true but not necessary for this argument. The best assumption usually connects the specific evidence to the specific conclusion.
Student method	Put the reason and conclusion side by side. Then ask what must also be true for the reason to count as support. The best assumption is usually narrower than a huge universal claim.
Analogy	A hidden assumption is a bridge over a gap. If the bridge is weak, even true facts may not get you to the conclusion.
Assessment focus	A good answer supplies a necessary bridge and avoids choices that are mere background, evidence, or overconfident guarantees.

Teaching Sequence

1. Put the stated reason and conclusion next to each other.

2. Ask what must be true for that reason to count in favor of that conclusion.

3. Prefer a narrow bridge over a sweeping guarantee.

4. Use the denial test: if this assumption were false, would the argument weaken?

Common Confusions To Watch For

1. Students may choose a statement that would be nice to know but is not required.

2. Students may choose a much stronger claim than the argument needs.

3. Students may confuse evidence with the assumption that lets the evidence matter.

Teacher Prompts

1. What is the missing bridge between these two sentences?

2. Would the conclusion still be supported if this choice were false?

3. Is this answer just helpful, or is it needed?

Worked Example

Scenario	A store's weekend trial of a new checkout line reduced waiting times, so the store should use that checkout setup every day.
Teacher think-aloud	The argument assumes weekend customers and weekday customers are similar enough, or that the checkout setup would still reduce waits under normal daily conditions.
Student takeaway	Assumptions connect the evidence to the conclusion without adding more than the argument needs.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A store tests a checkout arrangement on Saturday and Sunday. Average waits fall from six minutes to four. The manager concludes, 'This arrangement will also reduce waits on weekdays.' No weekday test has been done.

What To Do

1. Copy the observed reason and the prediction separately.

2. Complete: 'The manager assumes that weekday conditions are similar enough in ___ for the weekend result to carry over.' Name a relevant feature such as customer volume or staffing.

3. Describe one possible weekday difference that would weaken that bridge. You are proposing a possibility, not claiming it happened.

Check before reading the answer. Does your assumption connect this weekend result to weekdays, rather than merely say that faster checkout is desirable?

Model Answer

Reason: weekend waits fell from six to four minutes. Prediction: weekday waits will fall too. The manager assumes weekday customer volume and staffing are similar enough for the arrangement to help. If weekdays have much less staff available, the arrangement might not work as it did in the trial.

Why it is adequate. It identifies the needed transfer from one setting to another and tests that assumption with a relevant possible difference.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Riley argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Riley's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The new buses were repainted blue, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The city council can explain the plan clearly to people outside the test group before asking for approval.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 2

Level 1

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Maya says, "The plan caused that result." Which hidden assumption does Maya's argument need?

A. The lockers are installed near the gym, which describes the setting but does not show what caused the result.	**B.** No other major change during the test period better explains the result than the plan does.
C. The school board announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The result is important enough to discuss before making a final decision.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 3

Level 1

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Sam says, "That means the plan helped patients over 60." Which hidden assumption does Sam's argument need?

A. Patients over 60 noticed the plan during the test period.	**B.** The text messages use a green pill icon, which may be true but is not a sign that the target group was helped or that the result mattered.
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 4

Level 1

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. Avery says, "If the plan can reduce staff resignations, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The company should focus on the side detail before asking whether the result matters.	**B.** The test calendar starts on a Monday, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The plan is new enough to get public attention.	**D.** Reducing staff resignations would matter enough to count in this decision, not just sound nice.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 5

Level 1

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The short-term result will not disappear once the test period ends or the rollout begins.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The shelf labels use bold black numbers, which may stay true even if the measured result does not last.	**D.** The short test is easy to summarize in one meeting.

Answer: A. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 6

Level 1

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The library can explain the plan clearly to people outside the test group before asking for approval.	**B.** The people in the test are enough like the wider group for the result to matter outside the test.
C. The children's-book checkout desk moved six feet, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 7

Level 1

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The login button changed from green to blue, which describes the setting but does not show what caused the result.	**B.** The platform announced the plan before the measured result changed, so the timing should be listed in the report.
C. Nothing else important changed during the same test period in a way that better explains the result.	**D.** The result is important enough to discuss before making a final decision.

Answer: C. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 8

Level 1

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Jordan says, "That means the plan helped residents on Maple Street." Which hidden assumption does Jordan's argument need?

A. Residents on Maple Street noticed the plan during the test period.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. The new light poles are made of aluminum, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** The result being measured is the right kind of evidence for whether the plan helped the group.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 9

Level 1

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. Riley says, "If the plan can increase course pass rates, then it should be adopted." Which hidden assumption does Riley's argument need?

A. Increasing course pass rates is important enough to help justify the plan, not just decorate it.	**B.** The tutoring room has new chairs, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The plan is new enough to get public attention.	**D.** The university should focus on the side detail before asking whether the result matters.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 10

Level 1

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The lunch menus are printed on thicker paper, which may stay true even if the measured result does not last.	**B.** The result from the short test will last long enough to matter after the rollout begins.
C. The plan can be started quickly if people approve it, so the first few weeks matter most.	**D.** The short test is easy to summarize in one meeting.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 11

Level 1

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The bank can explain the plan clearly to people outside the test group before asking for approval.
C. The warning texts arrive from a short code, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The small test is close enough to the real rollout to count as useful evidence for the wider plan.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 12

Level 1

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The park service announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The result is important enough to discuss before making a final decision.
C. The result is not better explained by another change that happened during the same test period.	**D.** The digital passes include a small trail map, which describes the setting but does not show what caused the result.

Answer: C. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 13

Level 1

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Taylor says, "That means the plan helped local families." Which hidden assumption does Taylor's argument need?

A. The Friday tickets are scanned at the east door, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** Improvement in the tracked result would count as a real sign of help for the target group.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Local families noticed the plan during the test period.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 14

Level 1

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. Morgan says, "If the plan can reduce repeat head injuries, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. A real change in repeat head injuries would be valuable enough to matter for this decision, not just be noticed.	**B.** The concussion checklist is printed on yellow paper, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The sports league should focus on the side detail before asking whether the result matters.	**D.** The plan is new enough to get public attention.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 15

Level 1

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The receipt email subject line changed, which may stay true even if the measured result does not last.	**D.** The test result is not just a temporary bump that fades when the test is over.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 16

Level 1

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The training room has a ceiling-mounted projector, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The wider group is enough like the test group that the result is a fair clue for the decision outside the test.	**D.** The warehouse can explain the plan clearly to people outside the test group before asking for approval.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 17

Level 1

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The city sanitation office announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** Other changes during the test were not strong enough to explain the result better than the plan.
C. The result is important enough to discuss before making a final decision.	**D.** The lobby compost bins have foot pedals, which describes the setting but does not show what caused the result.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 18

Level 1

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Maya says, "That means the plan helped new app users." Which hidden assumption does Maya's argument need?

A. The measurement is close enough to the goal to show whether the group was actually helped.	**B.** The privacy screen uses a shield icon, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** New app users noticed the plan during the test period.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 19

Level 1

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. Sam says, "If the plan can reduce patient no-show rates, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The clinic should focus on the side detail before asking whether the result matters.	**B.** The appointment cards are white, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The plan is new enough to get public attention.	**D.** The goal of reducing patient no-show rates is important enough to help decide what to do.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 20

Level 1

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The gate signs are backlit, which may stay true even if the measured result does not last.	**B.** The short test is easy to summarize in one meeting.
C. The improvement seen during the test will continue if the plan becomes permanent.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 21

Level 1

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The landlord can explain the plan clearly to people outside the test group before asking for approval.	**B.** The repair portal uses a house logo, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The test setting matches the bigger decision closely enough for the result to matter beyond the trial.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 22

Level 1

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The result is important enough to discuss before making a final decision.	**B.** The cafeteria announced the plan before the measured result changed, so the timing should be listed in the report.
C. The fruit bowls are ceramic, which describes the setting but does not show what caused the result.	**D.** The plan is the best explanation of the result, not some other change during the same test period.

Answer: D. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

Question 23

Level 1

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Casey says, "That means the plan helped support agents." Which hidden assumption does Casey's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. Support agents noticed the plan during the test period.	**D.** The coaching slides use blue headers, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 24

Level 1

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. Jordan says, "If the plan can reduce average household water use, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The water-leak alert screen includes a blue droplet icon, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** Average household water use matters enough that improving it could be a serious reason for the plan.
C. The plan is new enough to get public attention.	**D.** The water utility should focus on the side detail before asking whether the result matters.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 25

Level 1

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The reminder tone is two beeps, which may stay true even if the measured result does not last.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The four-week result is stable enough to be useful for a longer-term decision.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 26

Level 1

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The election office can explain the plan clearly to people outside the test group before asking for approval.
C. The ballot-tracking page uses county colors, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 27

Level 1

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The review prompts use a bell icon, which describes the setting but does not show what caused the result.	**B.** No other major change during the test period better explains the result than the plan does.
C. The tutoring app announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The result is important enough to discuss before making a final decision.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 28

Level 1

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Avery says, "That means the plan helped new gym members." Which hidden assumption does Avery's argument need?

A. New gym members noticed the plan during the test period.	**B.** The orientation mats are black, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 29

Level 1

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. Taylor says, "If the plan can reduce reported minor crashes, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. Reducing reported minor crashes would matter enough to count in this decision, not just sound nice.	**B.** The feedback dashboard uses star ratings, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The insurer should focus on the side detail before asking whether the result matters.	**D.** The plan is new enough to get public attention.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 30

Level 1

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The short-term result will not disappear once the test period ends or the rollout begins.
C. The correction box has a gray border, which may stay true even if the measured result does not last.	**D.** The short test is easy to summarize in one meeting.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 31

Level 1

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The stall price signs are laminated, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The people in the test are enough like the wider group for the result to matter outside the test.	**D.** The farmers market can explain the plan clearly to people outside the test group before asking for approval.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 32

Level 1

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result.	**B.** The result is important enough to discuss before making a final decision.
C. The quiet-hours text reminder uses a small moon icon, which describes the setting but does not show what caused the result.	**D.** The hotel announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Maya says, "The plan caused that result." Which hidden assumption does Maya's argument need?

A. The new buses were repainted blue, which describes the setting but does not show what caused the result.	**B.** Nothing else important changed during the same test period in a way that better explains the result.
C. The result is important enough to discuss before making a final decision.	**D.** The city council announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 34

Level 2

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Sam says, "That means the plan helped ninth-grade students." Which hidden assumption does Sam's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group.	**B.** Ninth-grade students noticed the plan during the test period.
C. The lockers are installed near the gym, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 35

Level 2

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. Avery says, "If the plan can reduce missed-dose reports, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The text messages use a green pill icon, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** The hospital should focus on the side detail before asking whether the result matters.
C. The plan is new enough to get public attention.	**D.** Reducing missed-dose reports is important enough to help justify the plan, not just decorate it.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 36

Level 2

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The test calendar starts on a Monday, which may stay true even if the measured result does not last.
C. The result from the short test will last long enough to matter after the rollout begins.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 37

Level 2

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The grocery chain can explain the plan clearly to people outside the test group before asking for approval.	**B.** The people in the test are enough like the wider group for the result to matter outside the test.
C. The shelf labels use bold black numbers, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 38

Level 2

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The result is not better explained by another change that happened during the same test period.	**B.** The children's-book checkout desk moved six feet, which describes the setting but does not show what caused the result.
C. The library announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The result is important enough to discuss before making a final decision.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 39

Level 2

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Jordan says, "That means the plan helped site administrators." Which hidden assumption does Jordan's argument need?

A. Site administrators noticed the plan during the test period.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. The login button changed from green to blue, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Improvement in the tracked result would count as a real sign of help for the target group.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 40

Level 2

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. Riley says, "If the plan can reduce reported thefts, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention.	**B.** The neighborhood association should focus on the side detail before asking whether the result matters.
C. A real change in reported thefts would be valuable enough to matter for this decision, not just be noticed.	**D.** The new light poles are made of aluminum, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 41

Level 2

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The tutoring room has new chairs, which may stay true even if the measured result does not last.	**D.** The test result is not just a temporary bump that fades when the test is over.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 42

Level 2

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The restaurant group can explain the plan clearly to people outside the test group before asking for approval.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The small test is close enough to the real rollout to count as useful evidence for the wider plan.	**D.** The lunch menus are printed on thicker paper, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 43

Level 2

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The warning texts arrive from a short code, which describes the setting but does not show what caused the result.	**B.** The result is important enough to discuss before making a final decision.
C. Other changes during the test were not strong enough to explain the result better than the plan.	**D.** The bank announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: C. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 44

Level 2

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Taylor says, "That means the plan helped weekend trail hikers." Which hidden assumption does Taylor's argument need?

A. The measurement is close enough to the goal to show whether the group was actually helped.	**B.** Weekend trail hikers noticed the plan during the test period.
C. The digital passes include a small trail map, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 45

Level 2

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. Morgan says, "If the plan can increase family visits, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The goal of increasing family visits is important enough to help decide what to do.	**B.** The plan is new enough to get public attention.
C. The Friday tickets are scanned at the east door, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**D.** The museum should focus on the side detail before asking whether the result matters.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 46

Level 2

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The improvement seen during the test will continue if the plan becomes permanent.
C. The short test is easy to summarize in one meeting.	**D.** The concussion checklist is printed on yellow paper, which may stay true even if the measured result does not last.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 47

Level 2

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The wider group is enough like the test group that the result is a fair clue for the decision outside the test.	**B.** The receipt email subject line changed, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The nonprofit can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 48

Level 2

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The training room has a ceiling-mounted projector, which describes the setting but does not show what caused the result.	**B.** The result is important enough to discuss before making a final decision.
C. The plan is the best explanation of the result, not some other change during the same test period.	**D.** The warehouse announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: C. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 49

Level 2

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Maya says, "That means the plan helped apartment residents." Which hidden assumption does Maya's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved.	**B.** The lobby compost bins have foot pedals, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Apartment residents noticed the plan during the test period.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 50

Level 2

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. Sam says, "If the plan can reduce publicly visible profiles, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The privacy screen uses a shield icon, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** The app maker should focus on the side detail before asking whether the result matters.
C. Publicly visible profiles matters enough that improving it could be a serious reason for the plan.	**D.** The plan is new enough to get public attention.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 51

Level 2

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The appointment cards are white, which may stay true even if the measured result does not last.	**B.** The short test is easy to summarize in one meeting.
C. The four-week result is stable enough to be useful for a longer-term decision.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 52

Level 2

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The gate signs are backlit, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The airline can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test setting matches the bigger decision closely enough for the result to matter beyond the trial.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 53

Level 2

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The landlord announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The result is important enough to discuss before making a final decision.
C. The repair portal uses a house logo, which describes the setting but does not show what caused the result.	**D.** No other major change during the test period better explains the result than the plan does.

Answer: D. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

Question 54

Level 2

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Casey says, "That means the plan helped middle-school students." Which hidden assumption does Casey's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** Middle-school students noticed the plan during the test period.
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.	**D.** The fruit bowls are ceramic, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 55

Level 2

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. Jordan says, "If the plan can reduce customer complaint rates, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The coaching slides use blue headers, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** Reducing customer complaint rates would matter enough to count in this decision, not just sound nice.
C. The call center should focus on the side detail before asking whether the result matters.	**D.** The plan is new enough to get public attention.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 56

Level 2

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The short-term result will not disappear once the test period ends or the rollout begins.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The short test is easy to summarize in one meeting.	**D.** The water-leak alert screen includes a blue droplet icon, which may stay true even if the measured result does not last.

Answer: A. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 57

Level 2

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The reminder tone is two beeps, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The police department can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 58

Level 2

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The ballot-tracking page uses county colors, which describes the setting but does not show what caused the result.	**B.** Nothing else important changed during the same test period in a way that better explains the result.
C. The result is important enough to discuss before making a final decision.	**D.** The election office announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 59

Level 2

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Avery says, "That means the plan helped language learners." Which hidden assumption does Avery's argument need?

A. The review prompts use a bell icon, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** Language learners noticed the plan during the test period.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** The result being measured is the right kind of evidence for whether the plan helped the group.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 60

Level 2

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. Taylor says, "If the plan can reduce new-member cancellations, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The gym should focus on the side detail before asking whether the result matters.	**B.** Reducing new-member cancellations is important enough to help justify the plan, not just decorate it.
C. The plan is new enough to get public attention.	**D.** The orientation mats are black, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 61

Level 2

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The result from the short test will last long enough to matter after the rollout begins.
C. The feedback dashboard uses star ratings, which may stay true even if the measured result does not last.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 62

Level 2

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The correction box has a gray border, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The newsroom can explain the plan clearly to people outside the test group before asking for approval.
C. The test result is interesting enough to discuss before the wider rollout.	**D.** The people in the test are enough like the wider group for the result to matter outside the test.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 63

Level 2

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The result is not better explained by another change that happened during the same test period.	**B.** The result is important enough to discuss before making a final decision.
C. The stall price signs are laminated, which describes the setting but does not show what caused the result.	**D.** The farmers market announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 64

Level 2

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Riley says, "That means the plan helped overnight hotel guests." Which hidden assumption does Riley's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** Improvement in the tracked result would count as a real sign of help for the target group.
C. Overnight hotel guests noticed the plan during the test period.	**D.** The quiet-hours text reminder uses a small moon icon, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Sam says, "That means the plan helped late-shift workers." Which hidden assumption does Sam's argument need?

A. Late-shift workers noticed the plan during the test period.	**B.** The new buses were repainted blue, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Improvement in the tracked result would count as a real sign of help for the target group.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 66

Level 3

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. Avery says, "If the plan can reduce classroom disruption reports, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The plan is new enough to get public attention.	**B.** The lockers are installed near the gym, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The school board should focus on the side detail before asking whether the result matters.	**D.** A real change in classroom disruption reports would be valuable enough to matter for this decision, not just be noticed.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 67

Level 3

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The test result is not just a temporary bump that fades when the test is over.	**B.** The short test is easy to summarize in one meeting.
C. The text messages use a green pill icon, which may stay true even if the measured result does not last.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: A. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 68

Level 3

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The test calendar starts on a Monday, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan.
C. The company can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 69

Level 3

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The grocery chain announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The result is important enough to discuss before making a final decision.
C. The result is not better explained by another change that happened during the same test period.	**D.** The shelf labels use bold black numbers, which describes the setting but does not show what caused the result.

Answer: C. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 70

Level 3

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Jordan says, "That means the plan helped families checking out children's books." Which hidden assumption does Jordan's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** Families checking out children's books noticed the plan during the test period.
C. The children's-book checkout desk moved six feet, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** The measurement is close enough to the goal to show whether the group was actually helped.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 71

Level 3

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. Riley says, "If the plan can reduce admin account takeovers, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The goal of reducing admin account takeovers is important enough to help decide what to do.	**B.** The login button changed from green to blue, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The platform should focus on the side detail before asking whether the result matters.	**D.** The plan is new enough to get public attention.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 72

Level 3

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The improvement seen during the test will continue if the plan becomes permanent.
C. The new light poles are made of aluminum, which may stay true even if the measured result does not last.	**D.** The short test is easy to summarize in one meeting.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 73

Level 3

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The tutoring room has new chairs, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The wider group is enough like the test group that the result is a fair clue for the decision outside the test.	**D.** The university can explain the plan clearly to people outside the test group before asking for approval.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 74

Level 3

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The lunch menus are printed on thicker paper, which describes the setting but does not show what caused the result.	**B.** The restaurant group announced the plan before the measured result changed, so the timing should be listed in the report.
C. The result is important enough to discuss before making a final decision.	**D.** Other changes during the test were not strong enough to explain the result better than the plan.

Answer: D. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

Question 75

Level 3

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Taylor says, "That means the plan helped checking-account customers." Which hidden assumption does Taylor's argument need?

A. Checking-account customers noticed the plan during the test period.	**B.** The tracked result is a fair way to judge whether the plan helped the people involved.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** The warning texts arrive from a short code, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 76

Level 3

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. Morgan says, "If the plan can reduce trail crowding complaints, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. Trail crowding complaints matters enough that improving it could be a serious reason for the plan.	**B.** The digital passes include a small trail map, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The plan is new enough to get public attention.	**D.** The park service should focus on the side detail before asking whether the result matters.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 77

Level 3

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The Friday tickets are scanned at the east door, which may stay true even if the measured result does not last.
C. The short test is easy to summarize in one meeting.	**D.** The four-week result is stable enough to be useful for a longer-term decision.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 78

Level 3

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The concussion checklist is printed on yellow paper, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The test setting matches the bigger decision closely enough for the result to matter beyond the trial.	**D.** The sports league can explain the plan clearly to people outside the test group before asking for approval.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 79

Level 3

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The result is important enough to discuss before making a final decision.	**B.** The plan is the best explanation of the result, not some other change during the same test period.
C. The receipt email subject line changed, which describes the setting but does not show what caused the result.	**D.** The nonprofit announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 80

Level 3

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Maya says, "That means the plan helped warehouse staff." Which hidden assumption does Maya's argument need?

A. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.	**B.** Warehouse staff noticed the plan during the test period.
C. The training room has a ceiling-mounted projector, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 81

Level 3

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. Sam says, "If the plan can reduce landfill waste from participating buildings, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The plan is new enough to get public attention.	**B.** The city sanitation office should focus on the side detail before asking whether the result matters.
C. The lobby compost bins have foot pedals, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**D.** Reducing landfill waste from participating buildings would matter enough to count in this decision, not just sound nice.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 82

Level 3

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The short test is easy to summarize in one meeting.
C. The short-term result will not disappear once the test period ends or the rollout begins.	**D.** The privacy screen uses a shield icon, which may stay true even if the measured result does not last.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 83

Level 3

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.
C. The appointment cards are white, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The clinic can explain the plan clearly to people outside the test group before asking for approval.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 84

Level 3

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. No other major change during the test period better explains the result than the plan does.	**B.** The result is important enough to discuss before making a final decision.
C. The gate signs are backlit, which describes the setting but does not show what caused the result.	**D.** The airline announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 85

Level 3

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Casey says, "That means the plan helped apartment tenants." Which hidden assumption does Casey's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. Apartment tenants noticed the plan during the test period.	**D.** The repair portal uses a house logo, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 86

Level 3

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. Jordan says, "If the plan can increase fruit purchases, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention.	**B.** Increasing fruit purchases is important enough to help justify the plan, not just decorate it.
C. The fruit bowls are ceramic, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**D.** The cafeteria should focus on the side detail before asking whether the result matters.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 87

Level 3

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The coaching slides use blue headers, which may stay true even if the measured result does not last.
C. The result from the short test will last long enough to matter after the rollout begins.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 88

Level 3

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The water-leak alert screen includes a blue droplet icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The water utility can explain the plan clearly to people outside the test group before asking for approval.	**D.** The people in the test are enough like the wider group for the result to matter outside the test.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 89

Level 3

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result.	**B.** The reminder tone is two beeps, which describes the setting but does not show what caused the result.
C. The police department announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The result is important enough to discuss before making a final decision.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 90

Level 3

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Avery says, "That means the plan helped mail voters." Which hidden assumption does Avery's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** Improvement in the tracked result would count as a real sign of help for the target group.
C. The ballot-tracking page uses county colors, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Mail voters noticed the plan during the test period.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 91

Level 3

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. Taylor says, "If the plan can increase vocabulary retention quiz scores, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The plan is new enough to get public attention.	**B.** The tutoring app should focus on the side detail before asking whether the result matters.
C. A real change in vocabulary retention quiz scores would be valuable enough to matter for this decision, not just be noticed.	**D.** The review prompts use a bell icon, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 92

Level 3

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The orientation mats are black, which may stay true even if the measured result does not last.
C. The short test is easy to summarize in one meeting.	**D.** The test result is not just a temporary bump that fades when the test is over.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 93

Level 3

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The small test is close enough to the real rollout to count as useful evidence for the wider plan.	**B.** The insurer can explain the plan clearly to people outside the test group before asking for approval.
C. The test result is interesting enough to discuss before the wider rollout.	**D.** The feedback dashboard uses star ratings, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 94

Level 3

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The newsroom announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The result is not better explained by another change that happened during the same test period.
C. The result is important enough to discuss before making a final decision.	**D.** The correction box has a gray border, which describes the setting but does not show what caused the result.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 95

Level 3

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Riley says, "That means the plan helped weekend farmers market shoppers." Which hidden assumption does Riley's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** Weekend farmers market shoppers noticed the plan during the test period.
C. The stall price signs are laminated, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** The measurement is close enough to the goal to show whether the group was actually helped.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 96

Level 3

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. Maya says, "If the plan can reduce noise complaints from guest rooms, then it should be adopted." Which hidden assumption does Maya's argument need?

A. The quiet-hours text reminder uses a small moon icon, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** The hotel should focus on the side detail before asking whether the result matters.
C. The goal of reducing noise complaints from guest rooms is important enough to help decide what to do.	**D.** The plan is new enough to get public attention.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. Avery says, "If the plan can reduce late-shift commute complaints, then it should be adopted." Which hidden assumption does Avery's argument need?

A. The city council should focus on the side detail before asking whether the result matters.	**B.** The new buses were repainted blue, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The plan is new enough to get public attention.	**D.** The goal of reducing late-shift commute complaints is important enough to help decide what to do.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 98

Level 4

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The lockers are installed near the gym, which may stay true even if the measured result does not last.
C. The improvement seen during the test will continue if the plan becomes permanent.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 99

Level 4

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The wider group is enough like the test group that the result is a fair clue for the decision outside the test.
C. The text messages use a green pill icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The hospital can explain the plan clearly to people outside the test group before asking for approval.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 100

Level 4

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. Other changes during the test were not strong enough to explain the result better than the plan.	**B.** The test calendar starts on a Monday, which describes the setting but does not show what caused the result.
C. The company announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The result is important enough to discuss before making a final decision.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 101

Level 4

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. A four-week test with weekly grocery shoppers found that shopper overpayment complaints fell by 27% compared with the four weeks before the test. Jordan says, "That means the plan helped weekly grocery shoppers." Which hidden assumption does Jordan's argument need?

A. The shelf labels use bold black numbers, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. Weekly grocery shoppers noticed the plan during the test period.	**D.** The measurement is close enough to the goal to show whether the group was actually helped.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 102

Level 4

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. Riley says, "If the plan can increase library card renewals, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention.	**B.** The library should focus on the side detail before asking whether the result matters.
C. Library card renewals matters enough that improving it could be a serious reason for the plan.	**D.** The children's-book checkout desk moved six feet, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 103

Level 4

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The login button changed from green to blue, which may stay true even if the measured result does not last.	**B.** The four-week result is stable enough to be useful for a longer-term decision.
C. The short test is easy to summarize in one meeting.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 104

Level 4

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test setting matches the bigger decision closely enough for the result to matter beyond the trial.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The new light poles are made of aluminum, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The neighborhood association can explain the plan clearly to people outside the test group before asking for approval.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 105

Level 4

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The university announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The tutoring room has new chairs, which describes the setting but does not show what caused the result.
C. The result is important enough to discuss before making a final decision.	**D.** The plan is the best explanation of the result, not some other change during the same test period.

Answer: D. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

Question 106

Level 4

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. A four-week test with lunch customers found that dessert orders fell by 16% compared with the four weeks before the test. Taylor says, "That means the plan helped lunch customers." Which hidden assumption does Taylor's argument need?

A. Lunch customers noticed the plan during the test period.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. The tracked result is a fair way to judge whether the plan helped the people involved.	**D.** The lunch menus are printed on thicker paper, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 107

Level 4

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. Morgan says, "If the plan can reduce overdraft fees, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The bank should focus on the side detail before asking whether the result matters.	**B.** The plan is new enough to get public attention.
C. Reducing overdraft fees would matter enough to count in this decision, not just sound nice.	**D.** The warning texts arrive from a short code, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 108

Level 4

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The digital passes include a small trail map, which may stay true even if the measured result does not last.
C. The plan can be started quickly if people approve it, so the first few weeks matter most.	**D.** The short-term result will not disappear once the test period ends or the rollout begins.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 109

Level 4

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The museum can explain the plan clearly to people outside the test group before asking for approval.	**D.** The Friday tickets are scanned at the east door, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 110

Level 4

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The concussion checklist is printed on yellow paper, which describes the setting but does not show what caused the result.	**B.** No other major change during the test period better explains the result than the plan does.
C. The result is important enough to discuss before making a final decision.	**D.** The sports league announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 111

Level 4

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. A four-week test with first-time donors found that donor retention rose by 14% compared with the four weeks before the test. Maya says, "That means the plan helped first-time donors." Which hidden assumption does Maya's argument need?

A. First-time donors noticed the plan during the test period.	**B.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.
C. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.	**D.** The receipt email subject line changed, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 112

Level 4

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. Sam says, "If the plan can reduce back-injury claims, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The plan is new enough to get public attention.	**B.** The training room has a ceiling-mounted projector, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The warehouse should focus on the side detail before asking whether the result matters.	**D.** Reducing back-injury claims is important enough to help justify the plan, not just decorate it.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 113

Level 4

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The result from the short test will last long enough to matter after the rollout begins.	**B.** The lobby compost bins have foot pedals, which may stay true even if the measured result does not last.
C. The short test is easy to summarize in one meeting.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: A. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 114

Level 4

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The privacy screen uses a shield icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The people in the test are enough like the wider group for the result to matter outside the test.
C. The app maker can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 115

Level 4

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. Nothing else important changed during the same test period in a way that better explains the result.	**B.** The clinic announced the plan before the measured result changed, so the timing should be listed in the report.
C. The appointment cards are white, which describes the setting but does not show what caused the result.	**D.** The result is important enough to discuss before making a final decision.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 116

Level 4

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. A four-week test with domestic flight passengers found that average boarding time fell by 9% compared with the four weeks before the test. Casey says, "That means the plan helped domestic flight passengers." Which hidden assumption does Casey's argument need?

A. The gate signs are backlit, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** The result being measured is the right kind of evidence for whether the plan helped the group.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Domestic flight passengers noticed the plan during the test period.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 117

Level 4

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. Jordan says, "If the plan can reduce unresolved repair requests, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention.	**B.** The landlord should focus on the side detail before asking whether the result matters.
C. The repair portal uses a house logo, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**D.** A real change in unresolved repair requests would be valuable enough to matter for this decision, not just be noticed.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 118

Level 4

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The short test is easy to summarize in one meeting.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The test result is not just a temporary bump that fades when the test is over.	**D.** The fruit bowls are ceramic, which may stay true even if the measured result does not last.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 119

Level 4

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The coaching slides use blue headers, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan.
C. The call center can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 120

Level 4

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. The result is not better explained by another change that happened during the same test period.	**B.** The water-leak alert screen includes a blue droplet icon, which describes the setting but does not show what caused the result.
C. The result is important enough to discuss before making a final decision.	**D.** The water utility announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 121

Level 4

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. A four-week test with patrol officers found that missing-camera-footage reports fell by 35% compared with the four weeks before the test. Avery says, "That means the plan helped patrol officers." Which hidden assumption does Avery's argument need?

A. The reminder tone is two beeps, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** Patrol officers noticed the plan during the test period.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Improvement in the tracked result would count as a real sign of help for the target group.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 122

Level 4

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. Taylor says, "If the plan can reduce phone calls asking ballot status, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The ballot-tracking page uses county colors, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** The plan is new enough to get public attention.
C. The goal of reducing phone calls asking ballot status is important enough to help decide what to do.	**D.** The election office should focus on the side detail before asking whether the result matters.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 123

Level 4

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The review prompts use a bell icon, which may stay true even if the measured result does not last.	**B.** The improvement seen during the test will continue if the plan becomes permanent.
C. The plan can be started quickly if people approve it, so the first few weeks matter most.	**D.** The short test is easy to summarize in one meeting.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 124

Level 4

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The wider group is enough like the test group that the result is a fair clue for the decision outside the test.	**B.** The orientation mats are black, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The gym can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 125

Level 4

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The result is important enough to discuss before making a final decision.	**B.** The feedback dashboard uses star ratings, which describes the setting but does not show what caused the result.
C. The insurer announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** Other changes during the test were not strong enough to explain the result better than the plan.

Answer: D. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

Question 126

Level 4

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. A four-week test with newsletter readers found that reader trust ratings rose by 7% compared with the four weeks before the test. Riley says, "That means the plan helped newsletter readers." Which hidden assumption does Riley's argument need?

A. The correction box has a gray border, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** Newsletter readers noticed the plan during the test period.
C. The measurement is close enough to the goal to show whether the group was actually helped.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: C. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 127

Level 4

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. Maya says, "If the plan can reduce price disputes, then it should be adopted." Which hidden assumption does Maya's argument need?

A. Price disputes matters enough that improving it could be a serious reason for the plan.	**B.** The stall price signs are laminated, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The farmers market should focus on the side detail before asking whether the result matters.	**D.** The plan is new enough to get public attention.

Answer: A. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 128

Level 4

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Sam says, "The result will continue if the plan becomes permanent." Which hidden assumption does Sam's argument need?

A. The quiet-hours text reminder uses a small moon icon, which may stay true even if the measured result does not last.	**B.** The four-week result is stable enough to be useful for a longer-term decision.
C. The short test is easy to summarize in one meeting.	**D.** The plan can be started quickly if people approve it, so the first few weeks matter most.

Answer: B. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

The city council is weighing a proposal aimed at late-shift workers: extend evening bus service until midnight. A four-week test with late-shift workers found that late-shift commute complaints fell by 22% compared with the four weeks before the test. Taylor says, "The result will continue if the plan becomes permanent." Which hidden assumption does Taylor's argument need?

A. The new buses were repainted blue, which may stay true even if the measured result does not last.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The four-week result is stable enough to be useful for a longer-term decision.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 130

Level 5

The school board is weighing a proposal aimed at ninth-grade students: require phone lockers during class. A four-week test with ninth-grade students found that classroom disruption reports fell by 31% compared with the four weeks before the test. Morgan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Morgan's argument need?

A. The lockers are installed near the gym, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The school board can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test setting matches the bigger decision closely enough for the result to matter beyond the trial.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 131

Level 5

The hospital is weighing a proposal aimed at patients over 60: send medication reminder texts before evening doses. A four-week test with patients over 60 found that missed-dose reports fell by 18% compared with the four weeks before the test. Casey says, "The plan caused that result." Which hidden assumption does Casey's argument need?

A. The plan is the best explanation of the result, not some other change during the same test period.	**B.** The result is important enough to discuss before making a final decision.
C. The text messages use a green pill icon, which describes the setting but does not show what caused the result.	**D.** The hospital announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 132

Level 5

The company is weighing a proposal aimed at software engineers: test a Monday-through-Thursday workweek. A four-week test with software engineers found that staff resignations fell by 15% compared with the four weeks before the test. Jordan says, "That means the plan helped software engineers." Which hidden assumption does Jordan's argument need?

A. The test calendar starts on a Monday, which may be true but is not a sign that the target group was helped or that the result mattered.	**B.** The tracked result is a fair way to judge whether the plan helped the people involved.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Software engineers noticed the plan during the test period.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 133

Level 5

The grocery chain is weighing a proposal aimed at weekly grocery shoppers: add larger unit-price labels on shelf tags. Riley says, "If the plan can reduce shopper overpayment complaints, then it should be adopted." Which hidden assumption does Riley's argument need?

A. The plan is new enough to get public attention.	**B.** The grocery chain should focus on the side detail before asking whether the result matters.
C. Shopper overpayment complaints matters enough that improving it could be a serious reason for the plan.	**D.** The shelf labels use bold black numbers, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 134

Level 5

The library is weighing a proposal aimed at families checking out children's books: waive late fines for children's books. A four-week test with families checking out children's books found that library card renewals rose by 19% compared with the four weeks before the test. Maya says, "The result will continue if the plan becomes permanent." Which hidden assumption does Maya's argument need?

A. The children's-book checkout desk moved six feet, which may stay true even if the measured result does not last.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The short test is easy to summarize in one meeting.	**D.** The short-term result will not disappear once the test period ends or the rollout begins.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 135

Level 5

The platform is weighing a proposal aimed at site administrators: require two-factor login for site administrators. A four-week test with site administrators found that admin account takeovers fell by 44% compared with the four weeks before the test. Sam argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Sam's argument need?

A. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.	**B.** The login button changed from green to blue, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.
C. The platform can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 136

Level 5

The neighborhood association is weighing a proposal aimed at residents on Maple Street: add brighter LED streetlights on Maple Street. A four-week test with residents on Maple Street found that reported thefts fell by 12% compared with the four weeks before the test. Avery says, "The plan caused that result." Which hidden assumption does Avery's argument need?

A. The neighborhood association announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** No other major change during the test period better explains the result than the plan does.
C. The new light poles are made of aluminum, which describes the setting but does not show what caused the result.	**D.** The result is important enough to discuss before making a final decision.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 137

Level 5

The university is weighing a proposal aimed at first-year statistics students: expand peer tutoring in statistics. A four-week test with first-year statistics students found that course pass rates rose by 11% compared with the four weeks before the test. Taylor says, "That means the plan helped first-year statistics students." Which hidden assumption does Taylor's argument need?

A. The measured result is a reasonable sign that the plan helped the target group, not just an interesting number.	**B.** The tutoring room has new chairs, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** First-year statistics students noticed the plan during the test period.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 138

Level 5

The restaurant group is weighing a proposal aimed at lunch customers: show calorie labels on printed lunch menus. Morgan says, "If the plan can reduce dessert orders, then it should be adopted." Which hidden assumption does Morgan's argument need?

A. The lunch menus are printed on thicker paper, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** Reducing dessert orders would matter enough to count in this decision, not just sound nice.
C. The plan is new enough to get public attention.	**D.** The restaurant group should focus on the side detail before asking whether the result matters.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

Question 139

Level 5

The bank is weighing a proposal aimed at checking-account customers: send overdraft warning texts before fees post. A four-week test with checking-account customers found that overdraft fees fell by 24% compared with the four weeks before the test. Casey says, "The result will continue if the plan becomes permanent." Which hidden assumption does Casey's argument need?

A. The warning texts arrive from a short code, which may stay true even if the measured result does not last.	**B.** The short test is easy to summarize in one meeting.
C. The plan can be started quickly if people approve it, so the first few weeks matter most.	**D.** The result from the short test will last long enough to matter after the rollout begins.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 140

Level 5

The park service is weighing a proposal aimed at weekend trail hikers: use timed-entry passes for weekend trail visits. A four-week test with weekend trail hikers found that trail crowding complaints fell by 33% compared with the four weeks before the test. Jordan argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Jordan's argument need?

A. The park service can explain the plan clearly to people outside the test group before asking for approval.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The people in the test are enough like the wider group for the result to matter outside the test.	**D.** The digital passes include a small trail map, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 141

Level 5

The museum is weighing a proposal aimed at local families: offer free admission on Fridays. A four-week test with local families found that family visits rose by 29% compared with the four weeks before the test. Riley says, "The plan caused that result." Which hidden assumption does Riley's argument need?

A. The result is important enough to discuss before making a final decision.	**B.** Nothing else important changed during the same test period in a way that better explains the result.
C. The Friday tickets are scanned at the east door, which describes the setting but does not show what caused the result.	**D.** The museum announced the plan before the measured result changed, so the timing should be listed in the report.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 142

Level 5

The sports league is weighing a proposal aimed at youth soccer players: add mandatory sideline concussion checks. A four-week test with youth soccer players found that repeat head injuries fell by 21% compared with the four weeks before the test. Maya says, "That means the plan helped youth soccer players." Which hidden assumption does Maya's argument need?

A. The result being measured is the right kind of evidence for whether the plan helped the group.	**B.** Youth soccer players noticed the plan during the test period.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** The concussion checklist is printed on yellow paper, which may be true but is not a sign that the target group was helped or that the result mattered.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 143

Level 5

The nonprofit is weighing a proposal aimed at first-time donors: send donation receipts within one day. Sam says, "If the plan can increase donor retention, then it should be adopted." Which hidden assumption does Sam's argument need?

A. The receipt email subject line changed, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**B.** The plan is new enough to get public attention.
C. The nonprofit should focus on the side detail before asking whether the result matters.	**D.** Increasing donor retention is important enough to help justify the plan, not just decorate it.

Answer: D. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 144

Level 5

The warehouse is weighing a proposal aimed at warehouse staff: offer monthly lifting-safety and ergonomic training. A four-week test with warehouse staff found that back-injury claims fell by 20% compared with the four weeks before the test. Avery says, "The result will continue if the plan becomes permanent." Which hidden assumption does Avery's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The training room has a ceiling-mounted projector, which may stay true even if the measured result does not last.
C. The test result is not just a temporary bump that fades when the test is over.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 145

Level 5

The city sanitation office is weighing a proposal aimed at apartment residents: place compost bins in apartment lobbies. A four-week test with apartment residents found that landfill waste from participating buildings fell by 17% compared with the four weeks before the test. Taylor argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Taylor's argument need?

A. The lobby compost bins have foot pedals, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The small test is close enough to the real rollout to count as useful evidence for the wider plan.
C. The city sanitation office can explain the plan clearly to people outside the test group before asking for approval.	**D.** The test result is interesting enough to discuss before the wider rollout.

Answer: B. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 146

Level 5

The app maker is weighing a proposal aimed at new app users: make new user profiles private by default. A four-week test with new app users found that publicly visible profiles fell by 48% compared with the four weeks before the test. Morgan says, "The plan caused that result." Which hidden assumption does Morgan's argument need?

A. The result is not better explained by another change that happened during the same test period.	**B.** The result is important enough to discuss before making a final decision.
C. The app maker announced the plan before the measured result changed, so the timing should be listed in the report.	**D.** The privacy screen uses a shield icon, which describes the setting but does not show what caused the result.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 147

Level 5

The clinic is weighing a proposal aimed at primary-care patients: reserve same-day appointment slots. A four-week test with primary-care patients found that patient no-show rates fell by 13% compared with the four weeks before the test. Casey says, "That means the plan helped primary-care patients." Which hidden assumption does Casey's argument need?

A. Primary-care patients noticed the plan during the test period.	**B.** The appointment cards are white, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**D.** Improvement in the tracked result would count as a real sign of help for the target group.

Answer: D. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 148

Level 5

The airline is weighing a proposal aimed at domestic flight passengers: board passengers by seat zone. Jordan says, "If the plan can reduce average boarding time, then it should be adopted." Which hidden assumption does Jordan's argument need?

A. The plan is new enough to get public attention.	**B.** The airline should focus on the side detail before asking whether the result matters.
C. A real change in average boarding time would be valuable enough to matter for this decision, not just be noticed.	**D.** The gate signs are backlit, which may affect presentation but does not show that the goal is worth pursuing or important enough.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

B. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 149

Level 5

The landlord is weighing a proposal aimed at apartment tenants: launch an online apartment repair portal. A four-week test with apartment tenants found that unresolved repair requests fell by 26% compared with the four weeks before the test. Riley says, "The result will continue if the plan becomes permanent." Which hidden assumption does Riley's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The repair portal uses a house logo, which may stay true even if the measured result does not last.
C. The improvement seen during the test will continue if the plan becomes permanent.	**D.** The short test is easy to summarize in one meeting.

Answer: C. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

Question 150

Level 5

The cafeteria is weighing a proposal aimed at middle-school students: move fruit bowls to the front of the cafeteria line. A four-week test with middle-school students found that fruit purchases rose by 23% compared with the four weeks before the test. Maya argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Maya's argument need?

A. The fruit bowls are ceramic, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The cafeteria can explain the plan clearly to people outside the test group before asking for approval.	**D.** The wider group is enough like the test group that the result is a fair clue for the decision outside the test.

Answer: D. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 151

Level 5

The call center is weighing a proposal aimed at support agents: give support agents weekly script coaching. A four-week test with support agents found that customer complaint rates fell by 18% compared with the four weeks before the test. Sam says, "The plan caused that result." Which hidden assumption does Sam's argument need?

A. Other changes during the test were not strong enough to explain the result better than the plan.	**B.** The call center announced the plan before the measured result changed, so the timing should be listed in the report.
C. The result is important enough to discuss before making a final decision.	**D.** The coaching slides use blue headers, which describes the setting but does not show what caused the result.

Answer: A. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 152

Level 5

The water utility is weighing a proposal aimed at local homeowners: send automatic household water-leak alerts. A four-week test with local homeowners found that average household water use fell by 10% compared with the four weeks before the test. Avery says, "That means the plan helped local homeowners." Which hidden assumption does Avery's argument need?

A. Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.	**B.** The measurement is close enough to the goal to show whether the group was actually helped.
C. The water-leak alert screen includes a blue droplet icon, which may be true but is not a sign that the target group was helped or that the result mattered.	**D.** Local homeowners noticed the plan during the test period.

Answer: B. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 153

Level 5

The police department is weighing a proposal aimed at patrol officers: send body-camera activation reminders before patrol shifts. Taylor says, "If the plan can reduce missing-camera-footage reports, then it should be adopted." Which hidden assumption does Taylor's argument need?

A. The police department should focus on the side detail before asking whether the result matters.	**B.** The reminder tone is two beeps, which may affect presentation but does not show that the goal is worth pursuing or important enough.
C. The goal of reducing missing-camera-footage reports is important enough to help decide what to do.	**D.** The plan is new enough to get public attention.

Answer: C. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 154

Level 5

The election office is weighing a proposal aimed at mail voters: offer online mail-ballot tracking. A four-week test with mail voters found that phone calls asking ballot status fell by 42% compared with the four weeks before the test. Morgan says, "The result will continue if the plan becomes permanent." Which hidden assumption does Morgan's argument need?

A. The plan can be started quickly if people approve it, so the first few weeks matter most.	**B.** The short test is easy to summarize in one meeting.
C. The ballot-tracking page uses county colors, which may stay true even if the measured result does not last.	**D.** The four-week result is stable enough to be useful for a longer-term decision.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 155

Level 5

The tutoring app is weighing a proposal aimed at language learners: send spaced-review prompts for language vocabulary. A four-week test with language learners found that vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. Casey argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Casey's argument need?

A. The test setting matches the bigger decision closely enough for the result to matter beyond the trial.	**B.** The test result is interesting enough to discuss before the wider rollout.
C. The review prompts use a bell icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.	**D.** The tutoring app can explain the plan clearly to people outside the test group before asking for approval.

Answer: A. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Question 156

Level 5

The gym is weighing a proposal aimed at new gym members: offer a beginner gym orientation. A four-week test with new gym members found that new-member cancellations fell by 19% compared with the four weeks before the test. Jordan says, "The plan caused that result." Which hidden assumption does Jordan's argument need?

A. The gym announced the plan before the measured result changed, so the timing should be listed in the report.	**B.** The plan is the best explanation of the result, not some other change during the same test period.
C. The result is important enough to discuss before making a final decision.	**D.** The orientation mats are black, which describes the setting but does not show what caused the result.

Answer: B. The hidden assumption is that the result came from the plan, not from another cause.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the result came from the plan, not from another cause.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the result came from the plan, not from another cause.

Question 157

Level 5

The insurer is weighing a proposal aimed at auto-insurance policyholders: send weekly safe-driving feedback. A four-week test with auto-insurance policyholders found that reported minor crashes fell by 8% compared with the four weeks before the test. Riley says, "That means the plan helped auto-insurance policyholders." Which hidden assumption does Riley's argument need?

A. The tracked result is a fair way to judge whether the plan helped the people involved.	**B.** The feedback dashboard uses star ratings, which may be true but is not a sign that the target group was helped or that the result mattered.
C. Auto-insurance policyholders noticed the plan during the test period.	**D.** Any positive-looking number is enough to show the plan helped, even if the number tracks the wrong thing.

Answer: A. The hidden assumption is that the measured result is a good sign of whether the plan helped.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is A because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the measured result is a good sign of whether the plan helped.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the measured result is a good sign of whether the plan helped.

Question 158

Level 5

The newsroom is weighing a proposal aimed at newsletter readers: place corrections at the top of articles. Maya says, "If the plan can increase reader trust ratings, then it should be adopted." Which hidden assumption does Maya's argument need?

A. The newsroom should focus on the side detail before asking whether the result matters.	**B.** Reader trust ratings matters enough that improving it could be a serious reason for the plan.
C. The correction box has a gray border, which may affect presentation but does not show that the goal is worth pursuing or important enough.	**D.** The plan is new enough to get public attention.

Answer: B. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is B because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. A side detail may be noticeable, but the argument does not need it to be true. A hidden assumption must connect the reason to the conclusion.

B. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the hoped-for result is important enough to count as a real reason.

Question 159

Level 5

The farmers market is weighing a proposal aimed at weekend farmers market shoppers: require clearer price signs at vendor stalls. A four-week test with weekend farmers market shoppers found that price disputes fell by 28% compared with the four weeks before the test. Sam says, "The result will continue if the plan becomes permanent." Which hidden assumption does Sam's argument need?

A. The stall price signs are laminated, which may stay true even if the measured result does not last.	**B.** The plan can be started quickly if people approve it, so the first few weeks matter most.
C. The short test is easy to summarize in one meeting.	**D.** The short-term result will not disappear once the test period ends or the rollout begins.

Answer: D. The hidden assumption is that the short test result will last long enough to matter.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is D because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

C. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the short test result will last long enough to matter.

D. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the short test result will last long enough to matter.

Question 160

Level 5

The hotel is weighing a proposal aimed at overnight hotel guests: send quiet-hours text reminders to hotel guests. A four-week test with overnight hotel guests found that noise complaints from guest rooms fell by 30% compared with the four weeks before the test. Avery argues, "That test is enough reason to use the plan more widely." Which hidden assumption does Avery's argument need?

A. The test result is interesting enough to discuss before the wider rollout.	**B.** The hotel can explain the plan clearly to people outside the test group before asking for approval.
C. The test group is similar enough to the wider group that the result can guide the bigger decision outside the test.	**D.** The quiet-hours text reminder uses a small moon icon, which is an easy-to-notice detail about the plan but not a bridge from test to rollout.

Answer: C. The hidden assumption is that the test is a fair guide to the bigger decision.

How to work it out. To uncover the answer, put the stated reason next to the conclusion and ask what bridge must be true between them. The correct choice is C because it supplies that bridge without adding a much stronger claim than the argument needs.

A. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

B. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

C. Correct. This is the missing bridge the argument needs before the conclusion can follow. The hidden assumption is that the test is a fair guide to the bigger decision.

D. Not correct. This does not supply the missing bridge in the argument. The hidden assumption is that the test is a fair guide to the bigger decision.

Skill 05

Test Relevance

Does That Matter?

Decide whether a fact actually matters for the claim. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Which fact actually helps us judge the claim?
Why it matters	Relevant evidence bears on the claim; irrelevant detail merely stands nearby. This skill protects students from being impressed by vivid facts that do not actually test the point at issue.
Conceptual core	Relevance is about fit. Evidence can be vivid, surprising, or emotionally interesting while still not bearing on the claim. Students should learn to anchor each relevance judgment in the claim's action, target group, and outcome. A relevant fact does not have to prove the claim by itself; it just has to make the claim easier or harder to assess.
Student method	Match the evidence to the claim's action, group, and measured result. If a fact does not help decide whether that specific claim is true, it is probably a side detail.
Analogy	Relevance is a spotlight. A bright detail can still be pointed at the wrong part of the stage.
Assessment focus	A good answer identifies the fact that bears most directly on the claim's action, target group, and outcome.

Teaching Sequence

1. Circle the action, group, and outcome in the claim.

2. Ask whether each option speaks to one of those anchors.

3. Reject decorative details that only share the same topic.

4. Prefer evidence from similar conditions when the claim is about whether a plan will work.

Common Confusions To Watch For

1. Students may pick a fact because it mentions the same setting or people.

2. Students may think irrelevant means false, even though irrelevant facts can be true.

3. Students may demand conclusive proof when the task only asks what matters most.

Teacher Prompts

1. Does this fact help decide the claim, or does it just sit near the claim?

2. Which part of the claim does this evidence touch?

3. If this fact changed, would our view of the claim change?

Worked Example

Scenario	A hotel manager claims quiet-hour text reminders will reduce hallway noise complaints from overnight guests.
Teacher think-aloud	A photo of the hotel lobby is not relevant. Complaint rates after a similar reminder program at comparable hotels are relevant because they match the action and outcome.
Student takeaway	Relevant evidence touches the exact claim, not just the general topic.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A hotel manager claims text reminders reduce hallway noise complaints. Fact A: comparable floors receiving reminders had four complaints per 100 occupied room-nights, versus seven on floors without reminders in the same month. Fact B: most guests liked the new lobby painting. A room-night means one occupied room for one night.

What To Do

1. Name the action and the outcome in the claim.

2. Choose which fact bears directly on the claim and explain the connection.

3. Explain why the other fact does not answer this question, even if it is true.

Check before reading the answer. Have you linked the evidence to reminders and noise complaints, rather than to general guest satisfaction?

Model Answer

The action is sending text reminders; the outcome is hallway noise complaints. Fact A compares that outcome with and without reminders using the same unit. Fact B concerns a painting and does not show whether reminders affect noise complaints.

Why it is adequate. The answer explains relevance through the specific action and outcome. Relevance alone does not prove the comparison establishes cause.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

Riley claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**D.** The new buses were repainted blue.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 2

Level 1

Maya claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**B.** Researchers measured the actual result before and after the plan was tried.
C. The lockers are installed near the gym.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 3

Level 1

Sam claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 4

Level 1

Avery claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A report says some software engineers liked the idea, but it does not check the claimed result.	**D.** A matched group that did not use the plan was tracked so the result could be compared.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 5

Level 1

Taylor claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The report checked shopper overpayment complaints, not just whether people said they liked the idea.	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**D.** The shelf labels use bold black numbers.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 6

Level 1

Morgan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. The children's-book checkout desk moved six feet.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 7

Level 1

Casey claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue.	**B.** A report says some site administrators liked the idea, but it does not check the claimed result.
C. The report tracked the claimed result both before the plan and after the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 8

Level 1

Jordan claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**D.** The report checks the claimed result among the people the plan is supposed to affect.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 9

Level 1

Riley claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. Researchers included a similar group without the plan, giving the result a fair comparison.	**D.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 10

Level 1

Maya claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result.
C. The lunch menus are printed on thicker paper.	**D.** Direct measurement tracks dessert orders instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 11

Level 1

Sam claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. The warning texts arrive from a short code.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 12

Level 1

Avery claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map.	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**D.** Before-and-after data compare the result from before the plan with the result after it began.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 13

Level 1

Taylor claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** Data come from the target group, not from a different group with different needs.
C. A report says some local families liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 14

Level 1

Morgan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A comparison group was tracked at the same time, so the plan's result could be checked.	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** The concussion checklist is printed on yellow paper.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 15

Level 1

Casey claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. The receipt email subject line changed.	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**D.** The report focuses on donor retention, which is the result named in the claim.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 16

Level 1

Jordan claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** The training room has a ceiling-mounted projector.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 17

Level 1

Riley claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**B.** A careful check focused on the result named in the claim, not just people's reactions to the idea.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 18

Level 1

Maya claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Researchers looked at the result for the same people the proposal is meant to help.	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 19

Level 1

Sam claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. The appointment cards are white.	**D.** The report compares the target group with a similar group that did not use the plan.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 20

Level 1

Avery claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**B.** A careful check measured whether average boarding time changed, not merely whether people approved of the plan.
C. The gate signs are backlit.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 21

Level 1

Taylor claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area.	**B.** A report says some apartment tenants liked the idea, but it does not check the claimed result.
C. The repair portal uses a house logo.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 22

Level 1

Morgan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic.	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result.
C. The report measures whether the result actually changed after the plan was used.	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 23

Level 1

Casey claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** The coaching slides use blue headers.
C. The report measures the claimed result in the group named in the proposal.	**D.** A report says some support agents liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 24

Level 1

Jordan claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The water-leak alert screen includes a blue droplet icon.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** A no-plan group was measured too, making the result easier to interpret.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 25

Level 1

Riley claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.
C. Because it is about missing-camera-footage reports, the fact speaks to the exact result being claimed.	**D.** The reminder tone is two beeps.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 26

Level 1

Maya claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.
C. The ballot-tracking page uses county colors.	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 27

Level 1

Sam claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried.	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.
C. The review prompts use a bell icon.	**D.** A report says some language learners liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 28

Level 1

Avery claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result.	**B.** The actual result was measured in the group the proposal is meant to help.
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.	**D.** The orientation mats are black.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 29

Level 1

Taylor claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.
C. A matched group that did not use the plan was tracked so the result could be compared.	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 30

Level 1

Morgan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The report checked reader trust ratings, not just whether people said they liked the idea.	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result.
C. The correction box has a gray border.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 31

Level 1

Casey claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**D.** The stall price signs are laminated.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 32

Level 1

Jordan claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. The new buses were repainted blue.	**B.** The report tracked the claimed result both before the plan and after the plan.
C. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 34

Level 2

Sam claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The lockers are installed near the gym.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 35

Level 2

Avery claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** A report says some patients over 60 liked the idea, but it does not check the claimed result.
C. The text messages use a green pill icon.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 36

Level 2

Taylor claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A report says some software engineers liked the idea, but it does not check the claimed result.	**B.** The test calendar starts on a Monday.
C. Direct measurement tracks staff resignations instead of only asking whether the plan sounds good.	**D.** A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 37

Level 2

Morgan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. The shelf labels use bold black numbers.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 38

Level 2

Casey claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.
C. The children's-book checkout desk moved six feet.	**D.** A report says some families checking out children's books liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 39

Level 2

Jordan claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. The login button changed from green to blue.	**B.** A report says some site administrators liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 40

Level 2

Riley claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 41

Level 2

Maya claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** The report focuses on course pass rates, which is the result named in the claim.
C. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**D.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 42

Level 2

Sam claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction.	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.
C. The lunch menus are printed on thicker paper.	**D.** A report says some lunch customers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 43

Level 2

Avery claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**B.** The warning texts arrive from a short code.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 44

Level 2

Taylor claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**B.** The digital passes include a small trail map.
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 45

Level 2

Morgan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan.	**B.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.
C. The Friday tickets are scanned at the east door.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 46

Level 2

Casey claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.	**B.** A careful check measured whether repeat head injuries changed, not merely whether people approved of the plan.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** The concussion checklist is printed on yellow paper.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 47

Level 2

Jordan claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** The receipt email subject line changed.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 48

Level 2

Riley claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**B.** The training room has a ceiling-mounted projector.
C. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 49

Level 2

Maya claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal.	**B.** A report says some apartment residents liked the idea, but it does not check the claimed result.
C. The lobby compost bins have foot pedals.	**D.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 50

Level 2

Sam claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The privacy screen uses a shield icon.	**B.** A no-plan group was measured too, making the result easier to interpret.
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**D.** A report says some new app users liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 51

Level 2

Avery claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. Because it is about patient no-show rates, the fact speaks to the exact result being claimed.	**D.** The appointment cards are white.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 52

Level 2

Taylor claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**B.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.
C. The gate signs are backlit.	**D.** A group like the target group tried the plan and saw the result improve in the same area.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 53

Level 2

Morgan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**B.** The repair portal uses a house logo.
C. A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.	**D.** Researchers measured the actual result before and after the plan was tried.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 54

Level 2

Casey claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A report says some middle-school students liked the idea, but it does not check the claimed result.	**B.** The fruit bowls are ceramic.
C. The actual result was measured in the group the proposal is meant to help.	**D.** A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 55

Level 2

Jordan claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers.	**B.** A matched group that did not use the plan was tracked so the result could be compared.
C. A report says some support agents liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 56

Level 2

Riley claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. The report checked average household water use, not just whether people said they liked the idea.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.
C. A report says some local homeowners liked the idea, but it does not check the claimed result.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 57

Level 2

Maya claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** The reminder tone is two beeps.
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.	**D.** A comparable group tried the plan and saw the tracked result improve under similar conditions.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 58

Level 2

Sam claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors.	**B.** A report says some mail voters liked the idea, but it does not check the claimed result.
C. The report tracked the claimed result both before the plan and after the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 59

Level 2

Avery claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result.	**B.** The report checks the claimed result among the people the plan is supposed to affect.
C. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.	**D.** The review prompts use a bell icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 60

Level 2

Taylor claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. Researchers included a similar group without the plan, giving the result a fair comparison.	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.
C. A report says some new gym members liked the idea, but it does not check the claimed result.	**D.** The orientation mats are black.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 61

Level 2

Morgan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The feedback dashboard uses star ratings.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.
C. A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.	**D.** Direct measurement tracks reported minor crashes instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 62

Level 2

Casey claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. The correction box has a gray border.	**B.** A report says some newsletter readers liked the idea, but it does not check the claimed result.
C. Another group in a similar setting used the plan and the same result improved.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 63

Level 2

Jordan claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.
C. The stall price signs are laminated.	**D.** A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 64

Level 2

Riley claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**B.** Data come from the target group, not from a different group with different needs.
C. The quiet-hours text reminder uses a small moon icon.	**D.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

Sam claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Data come from the target group, not from a different group with different needs.	**B.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.
C. A report says some late-shift workers liked the idea, but it does not check the claimed result.	**D.** The new buses were repainted blue.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 66

Level 3

Avery claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym.	**B.** A comparison group was tracked at the same time, so the plan's result could be checked.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 67

Level 3

Taylor claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.
C. The report focuses on missed-dose reports, which is the result named in the claim.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 68

Level 3

Morgan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. The test calendar starts on a Monday.	**B.** A report says some software engineers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**D.** A comparable group tried the plan, and the result being checked moved in the right direction.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 69

Level 3

Casey claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** The shelf labels use bold black numbers.
C. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 70

Level 3

Jordan claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.	**B.** Researchers looked at the result for the same people the proposal is meant to help.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** The children's-book checkout desk moved six feet.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 71

Level 3

Riley claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A report says some site administrators liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.
C. The report compares the target group with a similar group that did not use the plan.	**D.** The login button changed from green to blue.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 72

Level 3

Maya claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. The new light poles are made of aluminum.	**D.** A careful check measured whether reported thefts changed, not merely whether people approved of the plan.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 73

Level 3

Sam claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. A similar group used the plan under similar conditions and the tracked result improved.	**D.** The tutoring room has new chairs.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 74

Level 3

Avery claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.
C. The lunch menus are printed on thicker paper.	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 75

Level 3

Taylor claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A report says some checking-account customers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.	**D.** The report measures the claimed result in the group named in the proposal.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 76

Level 3

Morgan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. The digital passes include a small trail map.	**B.** A report says some weekend trail hikers liked the idea, but it does not check the claimed result.
C. A no-plan group was measured too, making the result easier to interpret.	**D.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 77

Level 3

Casey claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** Because it is about family visits, the fact speaks to the exact result being claimed.
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 78

Level 3

Jordan claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. A group like the target group tried the plan and saw the result improve in the same area.	**B.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.
C. The concussion checklist is printed on yellow paper.	**D.** A report says some youth soccer players liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 79

Level 3

Riley claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A report says some first-time donors liked the idea, but it does not check the claimed result.	**B.** The receipt email subject line changed.
C. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 80

Level 3

Maya claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The training room has a ceiling-mounted projector.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 81

Level 3

Sam claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. The lobby compost bins have foot pedals.	**B.** A matched group that did not use the plan was tracked so the result could be compared.
C. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**D.** A report says some apartment residents liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 82

Level 3

Avery claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. The report checked publicly visible profiles, not just whether people said they liked the idea.	**B.** A report says some new app users liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 83

Level 3

Taylor claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A comparable group tried the plan and saw the tracked result improve under similar conditions.
C. A report says some primary-care patients liked the idea, but it does not check the claimed result.	**D.** The appointment cards are white.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 84

Level 3

Morgan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. Researchers measured the actual result before and after the plan was tried.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.
C. The gate signs are backlit.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 85

Level 3

Casey claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The repair portal uses a house logo.
C. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 86

Level 3

Jordan claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. The fruit bowls are ceramic.	**B.** Researchers included a similar group without the plan, giving the result a fair comparison.
C. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 87

Level 3

Riley claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** A report says some support agents liked the idea, but it does not check the claimed result.
C. Direct measurement tracks customer complaint rates instead of only asking whether the plan sounds good.	**D.** The coaching slides use blue headers.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 88

Level 3

Maya claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A report says some local homeowners liked the idea, but it does not check the claimed result.	**B.** The water-leak alert screen includes a blue droplet icon.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** Another group in a similar setting used the plan and the same result improved.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 89

Level 3

Sam claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** A report says some patrol officers liked the idea, but it does not check the claimed result.
C. The reminder tone is two beeps.	**D.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 90

Level 3

Avery claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** Data come from the target group, not from a different group with different needs.
C. The ballot-tracking page uses county colors.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 91

Level 3

Taylor claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A report says some language learners liked the idea, but it does not check the claimed result.	**B.** The review prompts use a bell icon.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 92

Level 3

Morgan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A report says some new gym members liked the idea, but it does not check the claimed result.	**B.** The orientation mats are black.
C. A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.	**D.** The report focuses on new-member cancellations, which is the result named in the claim.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 93

Level 3

Casey claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A comparable group tried the plan, and the result being checked moved in the right direction.	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.
C. The feedback dashboard uses star ratings.	**D.** A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 94

Level 3

Jordan claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**B.** Before-and-after data compare the result from before the plan with the result after it began.
C. The correction box has a gray border.	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 95

Level 3

Riley claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**B.** The stall price signs are laminated.
C. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 96

Level 3

Maya claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. The quiet-hours text reminder uses a small moon icon.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. The report compares the target group with a similar group that did not use the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

Avery claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.	**B.** The report compares the target group with a similar group that did not use the plan.
C. The new buses were repainted blue.	**D.** A report says some late-shift workers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 98

Level 4

Taylor claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. A careful check measured whether classroom disruption reports changed, not merely whether people approved of the plan.	**B.** A report says some ninth-grade students liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.	**D.** The lockers are installed near the gym.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 99

Level 4

Morgan claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.	**B.** The text messages use a green pill icon.
C. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**D.** A similar group used the plan under similar conditions and the tracked result improved.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 100

Level 4

Casey claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A report says some software engineers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 101

Level 4

Jordan claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.	**B.** Researchers looked at the result for the same people the proposal is meant to help.
C. The shelf labels use bold black numbers.	**D.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 102

Level 4

Riley claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some families checking out children's books liked the idea, but it does not check the claimed result.
C. The children's-book checkout desk moved six feet.	**D.** A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 103

Level 4

Maya claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**B.** The login button changed from green to blue.
C. A report says some site administrators liked the idea, but it does not check the claimed result.	**D.** Because it is about admin account takeovers, the fact speaks to the exact result being claimed.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 104

Level 4

Sam claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. The new light poles are made of aluminum.	**B.** A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.
C. A group like the target group tried the plan and saw the result improve in the same area.	**D.** A report says some residents on Maple Street liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 105

Level 4

Avery claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. The tutoring room has new chairs.	**B.** A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.
C. A report says some first-year statistics students liked the idea, but it does not check the claimed result.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 106

Level 4

Taylor claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**B.** A report says some lunch customers liked the idea, but it does not check the claimed result.
C. The report measures the claimed result in the group named in the proposal.	**D.** The lunch menus are printed on thicker paper.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 107

Level 4

Morgan claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.
C. A matched group that did not use the plan was tracked so the result could be compared.	**D.** A report says some checking-account customers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 108

Level 4

Casey claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.	**B.** The digital passes include a small trail map.
C. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**D.** The report checked trail crowding complaints, not just whether people said they liked the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 109

Level 4

Jordan claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some local families liked the idea, but it does not check the claimed result.
C. The Friday tickets are scanned at the east door.	**D.** A detailed story describes why people like the plan, but it still does not measure whether family visits changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 110

Level 4

Riley claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The concussion checklist is printed on yellow paper.	**B.** Researchers measured the actual result before and after the plan was tried.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 111

Level 4

Maya claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** The receipt email subject line changed.
C. The actual result was measured in the group the proposal is meant to help.	**D.** A report says some first-time donors liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 112

Level 4

Sam claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.	**B.** The training room has a ceiling-mounted projector.
C. A report says some warehouse staff liked the idea, but it does not check the claimed result.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 113

Level 4

Avery claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. Direct measurement tracks landfill waste from participating buildings instead of only asking whether the plan sounds good.	**B.** A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 114

Level 4

Taylor claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.	**B.** Another group in a similar setting used the plan and the same result improved.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 115

Level 4

Morgan claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. The report tracked the claimed result both before the plan and after the plan.	**B.** The appointment cards are white.
C. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**D.** A report says some primary-care patients liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 116

Level 4

Casey claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit.	**B.** The report checks the claimed result among the people the plan is supposed to affect.
C. A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 117

Level 4

Jordan claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.
C. The repair portal uses a house logo.	**D.** A comparison group was tracked at the same time, so the plan's result could be checked.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 118

Level 4

Riley claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**B.** A report says some middle-school students liked the idea, but it does not check the claimed result.
C. The report focuses on fruit purchases, which is the result named in the claim.	**D.** The fruit bowls are ceramic.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 119

Level 4

Maya claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. The coaching slides use blue headers.	**D.** A report says some support agents liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 120

Level 4

Sam claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**D.** The water-leak alert screen includes a blue droplet icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 121

Level 4

Avery claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. A report says some patrol officers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.
C. The reminder tone is two beeps.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 122

Level 4

Taylor claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. The ballot-tracking page uses county colors.	**B.** A report says some mail voters liked the idea, but it does not check the claimed result.
C. The report compares the target group with a similar group that did not use the plan.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 123

Level 4

Morgan claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.	**B.** A careful check measured whether vocabulary retention quiz scores changed, not merely whether people approved of the plan.
C. A report says some language learners liked the idea, but it does not check the claimed result.	**D.** The review prompts use a bell icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 124

Level 4

Casey claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. A similar group used the plan under similar conditions and the tracked result improved.	**B.** A report says some new gym members liked the idea, but it does not check the claimed result.
C. The orientation mats are black.	**D.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 125

Level 4

Jordan claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.	**B.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.
C. The feedback dashboard uses star ratings.	**D.** A careful check focused on the result named in the claim, not just people's reactions to the idea.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 126

Level 4

Riley claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**B.** The correction box has a gray border.
C. Researchers looked at the result for the same people the proposal is meant to help.	**D.** A report says some newsletter readers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 127

Level 4

Maya claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**D.** The stall price signs are laminated.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 128

Level 4

Sam claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A report says some overnight hotel guests liked the idea, but it does not check the claimed result.	**B.** Because it is about noise complaints from guest rooms, the fact speaks to the exact result being claimed.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

Taylor claims the proposal to extend evening bus service until midnight will reduce late-shift commute complaints. Which fact matters most for checking that claim?

A. Because it is about late-shift commute complaints, the fact speaks to the exact result being claimed.	**B.** A report says some late-shift workers liked the idea, but it does not check the claimed result.
C. The new buses were repainted blue.	**D.** A detailed story describes why people like the plan, but it still does not measure whether late-shift commute complaints changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 130

Level 5

Morgan claims the proposal to require phone lockers during class will reduce classroom disruption reports. Which fact matters most for checking that claim?

A. The lockers are installed near the gym.	**B.** A group like the target group tried the plan and saw the result improve in the same area.
C. A report says some ninth-grade students liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether classroom disruption reports changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 131

Level 5

Casey claims the proposal to send medication reminder texts before evening doses will reduce missed-dose reports. Which fact matters most for checking that claim?

A. A report says some patients over 60 liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether missed-dose reports changed.
C. The report measures whether the result actually changed after the plan was used.	**D.** The text messages use a green pill icon.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 132

Level 5

Jordan claims the proposal to test a Monday-through-Thursday workweek will reduce staff resignations. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether staff resignations changed.	**B.** The test calendar starts on a Monday.
C. A report says some software engineers liked the idea, but it does not check the claimed result.	**D.** The report measures the claimed result in the group named in the proposal.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 133

Level 5

Riley claims the proposal to add larger unit-price labels on shelf tags will reduce shopper overpayment complaints. Which fact matters most for checking that claim?

A. A no-plan group was measured too, making the result easier to interpret.	**B.** A report says some weekly grocery shoppers liked the idea, but it does not check the claimed result.
C. The shelf labels use bold black numbers.	**D.** A detailed story describes why people like the plan, but it still does not measure whether shopper overpayment complaints changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 134

Level 5

Maya claims the proposal to waive late fines for children's books will increase library card renewals. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether library card renewals changed.	**B.** The report checked library card renewals, not just whether people said they liked the idea.
C. A report says some families checking out children's books liked the idea, but it does not check the claimed result.	**D.** The children's-book checkout desk moved six feet.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 135

Level 5

Sam claims the proposal to require two-factor login for site administrators will reduce admin account takeovers. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether admin account takeovers changed.	**B.** The login button changed from green to blue.
C. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**D.** A report says some site administrators liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 136

Level 5

Avery claims the proposal to add brighter LED streetlights on Maple Street will reduce reported thefts. Which fact matters most for checking that claim?

A. A report says some residents on Maple Street liked the idea, but it does not check the claimed result.	**B.** The new light poles are made of aluminum.
C. A detailed story describes why people like the plan, but it still does not measure whether reported thefts changed.	**D.** Researchers measured the actual result before and after the plan was tried.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 137

Level 5

Taylor claims the proposal to expand peer tutoring in statistics will increase course pass rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether course pass rates changed.	**B.** A report says some first-year statistics students liked the idea, but it does not check the claimed result.
C. The actual result was measured in the group the proposal is meant to help.	**D.** The tutoring room has new chairs.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 138

Level 5

Morgan claims the proposal to show calorie labels on printed lunch menus will reduce dessert orders. Which fact matters most for checking that claim?

A. A report says some lunch customers liked the idea, but it does not check the claimed result.	**B.** The lunch menus are printed on thicker paper.
C. A detailed story describes why people like the plan, but it still does not measure whether dessert orders changed.	**D.** A matched group that did not use the plan was tracked so the result could be compared.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 139

Level 5

Casey claims the proposal to send overdraft warning texts before fees post will reduce overdraft fees. Which fact matters most for checking that claim?

A. The warning texts arrive from a short code.	**B.** A detailed story describes why people like the plan, but it still does not measure whether overdraft fees changed.
C. A report says some checking-account customers liked the idea, but it does not check the claimed result.	**D.** Direct measurement tracks overdraft fees instead of only asking whether the plan sounds good.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 140

Level 5

Jordan claims the proposal to use timed-entry passes for weekend trail visits will reduce trail crowding complaints. Which fact matters most for checking that claim?

A. A report says some weekend trail hikers liked the idea, but it does not check the claimed result.	**B.** A detailed story describes why people like the plan, but it still does not measure whether trail crowding complaints changed.
C. Another group in a similar setting used the plan and the same result improved.	**D.** The digital passes include a small trail map.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 141

Level 5

Riley claims the proposal to offer free admission on Fridays will increase family visits. Which fact matters most for checking that claim?

A. The Friday tickets are scanned at the east door.	**B.** The report tracked the claimed result both before the plan and after the plan.
C. A detailed story describes why people like the plan, but it still does not measure whether family visits changed.	**D.** A report says some local families liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 142

Level 5

Maya claims the proposal to add mandatory sideline concussion checks will reduce repeat head injuries. Which fact matters most for checking that claim?

A. The report checks the claimed result among the people the plan is supposed to affect.	**B.** The concussion checklist is printed on yellow paper.
C. A report says some youth soccer players liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether repeat head injuries changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 143

Level 5

Sam claims the proposal to send donation receipts within one day will increase donor retention. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether donor retention changed.	**B.** A report says some first-time donors liked the idea, but it does not check the claimed result.
C. The receipt email subject line changed.	**D.** Researchers included a similar group without the plan, giving the result a fair comparison.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 144

Level 5

Avery claims the proposal to offer monthly lifting-safety and ergonomic training will reduce back-injury claims. Which fact matters most for checking that claim?

A. The training room has a ceiling-mounted projector.	**B.** A report says some warehouse staff liked the idea, but it does not check the claimed result.
C. The report focuses on back-injury claims, which is the result named in the claim.	**D.** A detailed story describes why people like the plan, but it still does not measure whether back-injury claims changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 145

Level 5

Taylor claims the proposal to place compost bins in apartment lobbies will reduce landfill waste from participating buildings. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether landfill waste from participating buildings changed.	**B.** A comparable group tried the plan, and the result being checked moved in the right direction.
C. A report says some apartment residents liked the idea, but it does not check the claimed result.	**D.** The lobby compost bins have foot pedals.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 146

Level 5

Morgan claims the proposal to make new user profiles private by default will reduce publicly visible profiles. Which fact matters most for checking that claim?

A. Before-and-after data compare the result from before the plan with the result after it began.	**B.** A detailed story describes why people like the plan, but it still does not measure whether publicly visible profiles changed.
C. A report says some new app users liked the idea, but it does not check the claimed result.	**D.** The privacy screen uses a shield icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 147

Level 5

Casey claims the proposal to reserve same-day appointment slots will reduce patient no-show rates. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether patient no-show rates changed.	**B.** A report says some primary-care patients liked the idea, but it does not check the claimed result.
C. The appointment cards are white.	**D.** Data come from the target group, not from a different group with different needs.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 148

Level 5

Jordan claims the proposal to board passengers by seat zone will reduce average boarding time. Which fact matters most for checking that claim?

A. The gate signs are backlit.	**B.** A detailed story describes why people like the plan, but it still does not measure whether average boarding time changed.
C. A comparison group was tracked at the same time, so the plan's result could be checked.	**D.** A report says some domestic flight passengers liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 149

Level 5

Riley claims the proposal to launch an online apartment repair portal will reduce unresolved repair requests. Which fact matters most for checking that claim?

A. A careful check measured whether unresolved repair requests changed, not merely whether people approved of the plan.	**B.** The repair portal uses a house logo.
C. A report says some apartment tenants liked the idea, but it does not check the claimed result.	**D.** A detailed story describes why people like the plan, but it still does not measure whether unresolved repair requests changed.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 150

Level 5

Maya claims the proposal to move fruit bowls to the front of the cafeteria line will increase fruit purchases. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether fruit purchases changed.	**B.** A similar group used the plan under similar conditions and the tracked result improved.
C. The fruit bowls are ceramic.	**D.** A report says some middle-school students liked the idea, but it does not check the claimed result.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 151

Level 5

Sam claims the proposal to give support agents weekly script coaching will reduce customer complaint rates. Which fact matters most for checking that claim?

A. The coaching slides use blue headers.	**B.** A report says some support agents liked the idea, but it does not check the claimed result.
C. A careful check focused on the result named in the claim, not just people's reactions to the idea.	**D.** A detailed story describes why people like the plan, but it still does not measure whether customer complaint rates changed.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 152

Level 5

Avery claims the proposal to send automatic household water-leak alerts will reduce average household water use. Which fact matters most for checking that claim?

A. A detailed story describes why people like the plan, but it still does not measure whether average household water use changed.	**B.** A report says some local homeowners liked the idea, but it does not check the claimed result.
C. The water-leak alert screen includes a blue droplet icon.	**D.** Researchers looked at the result for the same people the proposal is meant to help.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 153

Level 5

Taylor claims the proposal to send body-camera activation reminders before patrol shifts will reduce missing-camera-footage reports. Which fact matters most for checking that claim?

A. The report compares the target group with a similar group that did not use the plan.	**B.** The reminder tone is two beeps.
C. A detailed story describes why people like the plan, but it still does not measure whether missing-camera-footage reports changed.	**D.** A report says some patrol officers liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Taylor claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 154

Level 5

Morgan claims the proposal to offer online mail-ballot tracking will reduce phone calls asking ballot status. Which fact matters most for checking that claim?

A. A report says some mail voters liked the idea, but it does not check the claimed result.	**B.** Because it is about phone calls asking ballot status, the fact speaks to the exact result being claimed.
C. The ballot-tracking page uses county colors.	**D.** A detailed story describes why people like the plan, but it still does not measure whether phone calls asking ballot status changed.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Morgan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 155

Level 5

Casey claims the proposal to send spaced-review prompts for language vocabulary will increase vocabulary retention quiz scores. Which fact matters most for checking that claim?

A. The review prompts use a bell icon.	**B.** A detailed story describes why people like the plan, but it still does not measure whether vocabulary retention quiz scores changed.
C. A group like the target group tried the plan and saw the result improve in the same area.	**D.** A report says some language learners liked the idea, but it does not check the claimed result.

Answer: C. Relevant evidence directly helps check whether the proposed action affects the result Casey claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is C because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 156

Level 5

Jordan claims the proposal to offer a beginner gym orientation will reduce new-member cancellations. Which fact matters most for checking that claim?

A. The orientation mats are black.	**B.** A detailed story describes why people like the plan, but it still does not measure whether new-member cancellations changed.
C. A report says some new gym members liked the idea, but it does not check the claimed result.	**D.** The report measures whether the result actually changed after the plan was used.

Answer: D. Relevant evidence directly helps check whether the proposed action affects the result Jordan claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is D because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

Question 157

Level 5

Riley claims the proposal to send weekly safe-driving feedback will reduce reported minor crashes. Which fact matters most for checking that claim?

A. The report measures the claimed result in the group named in the proposal.	**B.** The feedback dashboard uses star ratings.
C. A detailed story describes why people like the plan, but it still does not measure whether reported minor crashes changed.	**D.** A report says some auto-insurance policyholders liked the idea, but it does not check the claimed result.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Riley claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

Question 158

Level 5

Maya claims the proposal to place corrections at the top of articles will increase reader trust ratings. Which fact matters most for checking that claim?

A. A report says some newsletter readers liked the idea, but it does not check the claimed result.	**B.** A no-plan group was measured too, making the result easier to interpret.
C. A detailed story describes why people like the plan, but it still does not measure whether reader trust ratings changed.	**D.** The correction box has a gray border.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Maya claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 159

Level 5

Sam claims the proposal to require clearer price signs at vendor stalls will reduce price disputes. Which fact matters most for checking that claim?

A. A report says some weekend farmers market shoppers liked the idea, but it does not check the claimed result.	**B.** The report checked price disputes, not just whether people said they liked the idea.
C. A detailed story describes why people like the plan, but it still does not measure whether price disputes changed.	**D.** The stall price signs are laminated.

Answer: B. Relevant evidence directly helps check whether the proposed action affects the result Sam claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is B because it bears directly on the issue being checked rather than merely sounding related.

A. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

B. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Question 160

Level 5

Avery claims the proposal to send quiet-hours text reminders to hotel guests will reduce noise complaints from guest rooms. Which fact matters most for checking that claim?

A. A comparable group tried the plan and saw the tracked result improve under similar conditions.	**B.** A report says some overnight hotel guests liked the idea, but it does not check the claimed result.
C. A detailed story describes why people like the plan, but it still does not measure whether noise complaints from guest rooms changed.	**D.** The quiet-hours text reminder uses a small moon icon.

Answer: A. Relevant evidence directly helps check whether the proposed action affects the result Avery claimed.

How to work it out. To uncover the answer, match each fact to the claim's action, group, and result. The correct choice is A because it bears directly on the issue being checked rather than merely sounding related.

A. Correct. This fact speaks directly to the claim because it checks the same action, target group, or measured result instead of drifting to a side issue.

B. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

C. Not correct. People's reactions may be interesting, but liking a plan is not the same as checking whether the claimed result happened.

D. Not correct. This fact is mostly a side detail. Relevant evidence should bear directly on the action, group, or result named in the claim.

Skill 06

Evaluate Evidence Quality

How Good Is the Evidence?

Pick the strongest evidence from the details given. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How strong is the evidence for this claim?
Why it matters	Not all evidence deserves the same weight. A story, a tiny survey, a biased report, and a well-designed comparison can all sound like evidence, but they do different amounts of work.
Conceptual core	Evidence quality depends on directness, comparison, measurement, sample size, and transparency. Students should learn that a piece of evidence can be relevant but still weak. A single anecdote, a vague report, or a tiny unrepresentative survey may point in a direction without carrying much weight. The skill is comparative: choose the option that would deserve the most confidence under the facts given.
Student method	Prefer evidence that measures the claimed result directly, uses a fair comparison, includes enough cases, and makes the method visible. Be cautious with anecdotes, impressions, and unsupported explanations.
Analogy	Evidence quality is like camera focus. A blurry photo may show something, but a clear, well-framed photo deserves more confidence.
Assessment focus	A good answer selects the option with better direct measurement, comparison, sample, and transparency.

Teaching Sequence

1. Ask whether the evidence measures the claimed outcome directly.

2. Look for a fair comparison or baseline.

3. Check whether the sample is large enough and similar enough to the target group.

4. Prefer visible methods over impressions and unexplained summaries.

Common Confusions To Watch For

1. Students may treat any number as strong evidence because it looks precise.

2. Students may overvalue a personal story when the claim is about a larger group.

3. Students may ignore whether the measurement matches the outcome in the claim.

Teacher Prompts

1. What was measured, and was it the right thing?

2. Compared with what?

3. How many cases, and were they like the group in the claim?

Worked Example

Scenario	A tutoring program claims it improves algebra pass rates. One happy student gives a testimonial, while a district report compares pass rates in similar classes with and without tutoring.
Teacher think-aloud	The testimonial is relevant but weak. The comparison report is stronger because it uses the right outcome, a comparison group, and more cases.
Student takeaway	Strong evidence is relevant evidence with better design.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. A tutoring program claims it raises algebra pass rates. Report A quotes one volunteer saying tutoring helped. Report B follows 200 students randomly assigned to receive tutoring or usual support, uses the same exam, and reports all results: 70 of 100 tutored students pass, versus 55 of 100 others. Both reports are accurately described; use only these facts.

What To Do

1. Choose the stronger evidence for the program's claim.

2. Give three reasons using the number of students, the comparison groups, and the outcome measure.

3. State one limit: what would you still want to know before assuming the result applies to another school?

Check before reading the answer. Explain the evidence's method rather than treating a confident testimonial or a large number alone as decisive.

Model Answer

Report B is stronger: it includes 200 students rather than one selected volunteer, random assignment supplies a fairer comparison, and a common exam measures the stated outcome. I would check whether another school's students and tutoring program are similar before transferring the conclusion.

Why it is adequate. It connects three stated design features to the claim and keeps a local result separate from a universal promise.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

Riley wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A large, fair study measured late-shift commute complaints before and after the change.	**D.** A report measured late-shift commute complaints after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 2

Level 1

Maya wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A report measured classroom disruption reports after the change but did not say what it was before the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups.	**D.** A random test compared similar groups with and without the change, then measured classroom disruption reports.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 3

Level 1

Sam wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Independent researchers used the same method to measure missed-dose reports before and after the plan.	**B.** Sam's friend says the idea feels promising but gives no data about missed-dose reports.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured missed-dose reports after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 4

Level 1

Avery wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Several similar settings tried the plan, and each one measured staff resignations the same way.
C. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups.	**D.** A report measured staff resignations after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 5

Level 1

Taylor wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about shopper overpayment complaints.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. The study reported its sample size, comparison method, and results for shopper overpayment complaints.	**D.** A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 6

Level 1

Morgan wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups.	**B.** Morgan's friend says the idea feels promising but gives no data about library card renewals.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Many people were included, and researchers measured library card renewals before and after the plan.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 7

Level 1

Casey wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. Similar groups were randomly assigned to use or not use the plan, then admin account takeovers was measured.	**B.** Casey's friend says the idea feels promising but gives no data about admin account takeovers.
C. A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups.	**D.** A report measured admin account takeovers after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 8

Level 1

Jordan wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A report measured reported thefts after the change but did not say what it was before the plan.	**B.** A team not connected to the proposal measured reported thefts with the same method each time.
C. A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 9

Level 1

Riley wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. The plan was tried in several similar places, with course pass rates measured consistently in each one.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Riley's friend says the idea feels promising but gives no data about course pass rates.	**D.** A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 10

Level 1

Maya wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. A report measured dessert orders after the change but did not say what it was before the plan.	**B.** The report gave the sample size, comparison method, and measured result for dessert orders.
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 11

Level 1

Sam wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. A report measured overdraft fees after the change but did not say what it was before the plan.	**B.** A fair before-and-after study used a large sample to track overdraft fees.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 12

Level 1

Avery wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked trail crowding complaints.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Avery's friend says the idea feels promising but gives no data about trail crowding complaints.	**D.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 13

Level 1

Taylor wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups.	**B.** A report measured family visits after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Outside researchers checked family visits before and after the plan using a consistent method.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 14

Level 1

Morgan wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about repeat head injuries.	**B.** A report measured repeat head injuries after the change but did not say what it was before the plan.
C. Multiple similar settings tracked repeat head injuries using the same method after trying the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 15

Level 1

Casey wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to donor retention.
C. Casey's friend says the idea feels promising but gives no data about donor retention.	**D.** A report measured donor retention after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 16

Level 1

Jordan wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Researchers used a large sample and checked back-injury claims both before and after the change.	**B.** A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured back-injury claims after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 17

Level 1

Riley wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about landfill waste from participating buildings.	**B.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan.
C. A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups.	**D.** The plan was tested against a similar no-plan group chosen by random assignment.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 18

Level 1

Maya wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. A report measured publicly visible profiles after the change but did not say what it was before the plan.	**B.** A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups.
C. The measurement was done by an independent team using the same rules before and after.	**D.** Maya's friend says the idea feels promising but gives no data about publicly visible profiles.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 19

Level 1

Sam wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Sam's friend says the idea feels promising but gives no data about patient no-show rates.
C. A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups.	**D.** Results from several similar places were checked with the same measure of patient no-show rates.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 20

Level 1

Avery wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A study write-up included the sample size, method, and results for average boarding time.	**D.** Avery's friend says the idea feels promising but gives no data about average boarding time.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 21

Level 1

Taylor wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. The evidence covers many cases and measures unresolved repair requests on both sides of the change.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Taylor's friend says the idea feels promising but gives no data about unresolved repair requests.	**D.** A report measured unresolved repair requests after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 22

Level 1

Morgan wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A fair random comparison measured fruit purchases in both the plan group and the no-plan group.
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups.	**D.** Morgan's friend says the idea feels promising but gives no data about fruit purchases.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 23

Level 1

Casey wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. People outside the project collected comparable before-and-after data on customer complaint rates.	**D.** Casey's friend says the idea feels promising but gives no data about customer complaint rates.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 24

Level 1

Jordan wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Jordan's friend says the idea feels promising but gives no data about average household water use.
C. A report measured average household water use after the change but did not say what it was before the plan.	**D.** Comparable sites each tried the plan and used the same method to track average household water use.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 25

Level 1

Riley wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. The evidence states who was measured, how the comparison worked, and what changed in missing-camera-footage reports.	**B.** A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups.
C. Riley's friend says the idea feels promising but gives no data about missing-camera-footage reports.	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 26

Level 1

Maya wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups.	**B.** A large, fair study measured phone calls asking ballot status before and after the change.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 27

Level 1

Sam wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan.
C. Sam's friend says the idea feels promising but gives no data about vocabulary retention quiz scores.	**D.** A random test compared similar groups with and without the change, then measured vocabulary retention quiz scores.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 28

Level 1

Avery wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. A report measured new-member cancellations after the change but did not say what it was before the plan.	**B.** Independent researchers used the same method to measure new-member cancellations before and after the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 29

Level 1

Taylor wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about reported minor crashes.	**B.** A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups.
C. Several similar settings tried the plan, and each one measured reported minor crashes the same way.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 30

Level 1

Morgan wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Morgan's friend says the idea feels promising but gives no data about reader trust ratings.
C. A report measured reader trust ratings after the change but did not say what it was before the plan.	**D.** The study reported its sample size, comparison method, and results for reader trust ratings.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 31

Level 1

Casey wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Many people were included, and researchers measured price disputes before and after the plan.	**B.** Casey's friend says the idea feels promising but gives no data about price disputes.
C. A report measured price disputes after the change but did not say what it was before the plan.	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 32

Level 1

Jordan wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Similar groups were randomly assigned to use or not use the plan, then noise complaints from guest rooms was measured.	**D.** Jordan's friend says the idea feels promising but gives no data about noise complaints from guest rooms.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about late-shift commute complaints.	**B.** Similar groups were randomly assigned to use or not use the plan, then late-shift commute complaints was measured.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 34

Level 2

Sam wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A team not connected to the proposal measured classroom disruption reports with the same method each time.	**B.** A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups.
C. A report measured classroom disruption reports after the change but did not say what it was before the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 35

Level 2

Avery wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups.
C. A report measured missed-dose reports after the change but did not say what it was before the plan.	**D.** The plan was tried in several similar places, with missed-dose reports measured consistently in each one.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 36

Level 2

Taylor wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. A report measured staff resignations after the change but did not say what it was before the plan.	**B.** A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups.
C. The report gave the sample size, comparison method, and measured result for staff resignations.	**D.** Taylor's friend says the idea feels promising but gives no data about staff resignations.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 37

Level 2

Morgan wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. A report measured shopper overpayment complaints after the change but did not say what it was before the plan.	**B.** Many people were included, and researchers measured shopper overpayment complaints before and after the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Morgan's friend says the idea feels promising but gives no data about shopper overpayment complaints.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 38

Level 2

Casey wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked library card renewals.	**B.** A report measured library card renewals after the change but did not say what it was before the plan.
C. Casey's friend says the idea feels promising but gives no data about library card renewals.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 39

Level 2

Jordan wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups.	**B.** A report measured admin account takeovers after the change but did not say what it was before the plan.
C. Jordan's friend says the idea feels promising but gives no data about admin account takeovers.	**D.** Outside researchers checked admin account takeovers before and after the plan using a consistent method.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 40

Level 2

Riley wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured reported thefts after the change but did not say what it was before the plan.
C. Multiple similar settings tracked reported thefts using the same method after trying the plan.	**D.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 41

Level 2

Maya wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to course pass rates.
C. A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups.	**D.** Maya's friend says the idea feels promising but gives no data about course pass rates.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 42

Level 2

Sam wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. A fair before-and-after study used a large sample to track dessert orders.	**B.** Sam's friend says the idea feels promising but gives no data about dessert orders.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured dessert orders after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 43

Level 2

Avery wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment.	**B.** A report measured overdraft fees after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Avery's friend says the idea feels promising but gives no data about overdraft fees.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 44

Level 2

Taylor wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups.	**B.** The measurement was done by an independent team using the same rules before and after.
C. Taylor's friend says the idea feels promising but gives no data about trail crowding complaints.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 45

Level 2

Morgan wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about family visits.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Results from several similar places were checked with the same measure of family visits.	**D.** A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 46

Level 2

Casey wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. Casey's friend says the idea feels promising but gives no data about repeat head injuries.	**B.** A report measured repeat head injuries after the change but did not say what it was before the plan.
C. A brochure explains how adding mandatory sideline concussion checks would work but does not measure repeat head injuries or compare groups.	**D.** A study write-up included the sample size, method, and results for repeat head injuries.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 47

Level 2

Jordan wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Jordan's friend says the idea feels promising but gives no data about donor retention.
C. Researchers used a large sample and checked donor retention both before and after the change.	**D.** A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 48

Level 2

Riley wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. A fair random comparison measured back-injury claims in both the plan group and the no-plan group.	**B.** Riley's friend says the idea feels promising but gives no data about back-injury claims.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured back-injury claims after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 49

Level 2

Maya wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups.
C. People outside the project collected comparable before-and-after data on landfill waste from participating buildings.	**D.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 50

Level 2

Sam wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Comparable sites each tried the plan and used the same method to track publicly visible profiles.	**B.** A report measured publicly visible profiles after the change but did not say what it was before the plan.
C. A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 51

Level 2

Avery wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups.	**B.** Avery's friend says the idea feels promising but gives no data about patient no-show rates.
C. The evidence states who was measured, how the comparison worked, and what changed in patient no-show rates.	**D.** A report measured patient no-show rates after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 52

Level 2

Taylor wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. The evidence covers many cases and measures average boarding time on both sides of the change.	**B.** A report measured average boarding time after the change but did not say what it was before the plan.
C. Taylor's friend says the idea feels promising but gives no data about average boarding time.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 53

Level 2

Morgan wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups.	**B.** A random test compared similar groups with and without the change, then measured unresolved repair requests.
C. Morgan's friend says the idea feels promising but gives no data about unresolved repair requests.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 54

Level 2

Casey wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. A report measured fruit purchases after the change but did not say what it was before the plan.	**B.** Casey's friend says the idea feels promising but gives no data about fruit purchases.
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups.	**D.** Independent researchers used the same method to measure fruit purchases before and after the plan.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 55

Level 2

Jordan wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Several similar settings tried the plan, and each one measured customer complaint rates the same way.
C. A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups.	**D.** Jordan's friend says the idea feels promising but gives no data about customer complaint rates.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 56

Level 2

Riley wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. The study reported its sample size, comparison method, and results for average household water use.	**B.** A report measured average household water use after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 57

Level 2

Maya wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about missing-camera-footage reports.	**B.** A large, fair study measured missing-camera-footage reports before and after the change.
C. A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups.	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 58

Level 2

Sam wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups.	**B.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Similar groups were randomly assigned to use or not use the plan, then phone calls asking ballot status was measured.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 59

Level 2

Avery wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Avery's friend says the idea feels promising but gives no data about vocabulary retention quiz scores.	**B.** A team not connected to the proposal measured vocabulary retention quiz scores with the same method each time.
C. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 60

Level 2

Taylor wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about new-member cancellations.	**B.** A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** The plan was tried in several similar places, with new-member cancellations measured consistently in each one.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 61

Level 2

Morgan wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A report measured reported minor crashes after the change but did not say what it was before the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Morgan's friend says the idea feels promising but gives no data about reported minor crashes.	**D.** The report gave the sample size, comparison method, and measured result for reported minor crashes.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 62

Level 2

Casey wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A report measured reader trust ratings after the change but did not say what it was before the plan.	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups.
C. Many people were included, and researchers measured reader trust ratings before and after the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 63

Level 2

Jordan wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Jordan's friend says the idea feels promising but gives no data about price disputes.
C. Researchers randomly compared a plan group with a no-plan group and tracked price disputes.	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 64

Level 2

Riley wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan.	**B.** Riley's friend says the idea feels promising but gives no data about noise complaints from guest rooms.
C. A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups.	**D.** Outside researchers checked noise complaints from guest rooms before and after the plan using a consistent method.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

Sam wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. Outside researchers checked late-shift commute complaints before and after the plan using a consistent method.	**B.** Sam's friend says the idea feels promising but gives no data about late-shift commute complaints.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured late-shift commute complaints after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 66

Level 3

Avery wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Multiple similar settings tracked classroom disruption reports using the same method after trying the plan.
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups.	**D.** Avery's friend says the idea feels promising but gives no data about classroom disruption reports.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 67

Level 3

Taylor wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Taylor's friend says the idea feels promising but gives no data about missed-dose reports.	**B.** A report measured missed-dose reports after the change but did not say what it was before the plan.
C. Researchers listed how many cases were studied, how they compared them, and what happened to missed-dose reports.	**D.** A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 68

Level 3

Morgan wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups.	**B.** Morgan's friend says the idea feels promising but gives no data about staff resignations.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A fair before-and-after study used a large sample to track staff resignations.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 69

Level 3

Casey wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked shopper overpayment complaints.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups.	**D.** Casey's friend says the idea feels promising but gives no data about shopper overpayment complaints.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 70

Level 3

Jordan wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan.	**B.** The measurement was done by an independent team using the same rules before and after.
C. A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 71

Level 3

Riley wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A report measured admin account takeovers after the change but did not say what it was before the plan.	**B.** Riley's friend says the idea feels promising but gives no data about admin account takeovers.
C. Results from several similar places were checked with the same measure of admin account takeovers.	**D.** A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 72

Level 3

Maya wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A report measured reported thefts after the change but did not say what it was before the plan.	**B.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A study write-up included the sample size, method, and results for reported thefts.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 73

Level 3

Sam wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Sam's friend says the idea feels promising but gives no data about course pass rates.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Researchers used a large sample and checked course pass rates both before and after the change.	**D.** A report measured course pass rates after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 74

Level 3

Avery wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured dessert orders after the change but did not say what it was before the plan.
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups.	**D.** The plan was tested against a similar no-plan group chosen by random assignment.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 75

Level 3

Taylor wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** People outside the project collected comparable before-and-after data on overdraft fees.
C. A report measured overdraft fees after the change but did not say what it was before the plan.	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 76

Level 3

Morgan wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups.
C. Morgan's friend says the idea feels promising but gives no data about trail crowding complaints.	**D.** Comparable sites each tried the plan and used the same method to track trail crowding complaints.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 77

Level 3

Casey wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The evidence states who was measured, how the comparison worked, and what changed in family visits.
C. A report measured family visits after the change but did not say what it was before the plan.	**D.** Casey's friend says the idea feels promising but gives no data about family visits.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 78

Level 3

Jordan wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. The evidence covers many cases and measures repeat head injuries on both sides of the change.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A report measured repeat head injuries after the change but did not say what it was before the plan.	**D.** Jordan's friend says the idea feels promising but gives no data about repeat head injuries.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 79

Level 3

Riley wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about donor retention.	**B.** A report measured donor retention after the change but did not say what it was before the plan.
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups.	**D.** A fair random comparison measured donor retention in both the plan group and the no-plan group.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 80

Level 3

Maya wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups.
C. Independent researchers used the same method to measure back-injury claims before and after the plan.	**D.** Maya's friend says the idea feels promising but gives no data about back-injury claims.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 81

Level 3

Sam wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A report measured landfill waste from participating buildings after the change but did not say what it was before the plan.	**B.** Several similar settings tried the plan, and each one measured landfill waste from participating buildings the same way.
C. Sam's friend says the idea feels promising but gives no data about landfill waste from participating buildings.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 82

Level 3

Avery wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. The study reported its sample size, comparison method, and results for publicly visible profiles.	**B.** A report measured publicly visible profiles after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Avery's friend says the idea feels promising but gives no data about publicly visible profiles.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 83

Level 3

Taylor wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Taylor's friend says the idea feels promising but gives no data about patient no-show rates.
C. A report measured patient no-show rates after the change but did not say what it was before the plan.	**D.** A large, fair study measured patient no-show rates before and after the change.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 84

Level 3

Morgan wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. Morgan's friend says the idea feels promising but gives no data about average boarding time.	**B.** A random test compared similar groups with and without the change, then measured average boarding time.
C. A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups.	**D.** A report measured average boarding time after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 85

Level 3

Casey wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A team not connected to the proposal measured unresolved repair requests with the same method each time.	**B.** A report measured unresolved repair requests after the change but did not say what it was before the plan.
C. Casey's friend says the idea feels promising but gives no data about unresolved repair requests.	**D.** A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 86

Level 3

Jordan wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Jordan's friend says the idea feels promising but gives no data about fruit purchases.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. The plan was tried in several similar places, with fruit purchases measured consistently in each one.	**D.** A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 87

Level 3

Riley wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan.	**B.** Riley's friend says the idea feels promising but gives no data about customer complaint rates.
C. The report gave the sample size, comparison method, and measured result for customer complaint rates.	**D.** A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 88

Level 3

Maya wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about average household water use.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups.	**D.** Many people were included, and researchers measured average household water use before and after the plan.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 89

Level 3

Sam wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. A report measured missing-camera-footage reports after the change but did not say what it was before the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Similar groups were randomly assigned to use or not use the plan, then missing-camera-footage reports was measured.	**D.** Sam's friend says the idea feels promising but gives no data about missing-camera-footage reports.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 90

Level 3

Avery wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. A report measured phone calls asking ballot status after the change but did not say what it was before the plan.	**B.** Avery's friend says the idea feels promising but gives no data about phone calls asking ballot status.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Outside researchers checked phone calls asking ballot status before and after the plan using a consistent method.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 91

Level 3

Taylor wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. Multiple similar settings tracked vocabulary retention quiz scores using the same method after trying the plan.	**B.** A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan.
C. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 92

Level 3

Morgan wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. A brochure explains how offering a beginner gym orientation would work but does not measure new-member cancellations or compare groups.	**B.** Researchers listed how many cases were studied, how they compared them, and what happened to new-member cancellations.
C. Morgan's friend says the idea feels promising but gives no data about new-member cancellations.	**D.** A report measured new-member cancellations after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 93

Level 3

Casey wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A fair before-and-after study used a large sample to track reported minor crashes.	**D.** Casey's friend says the idea feels promising but gives no data about reported minor crashes.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 94

Level 3

Jordan wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. Researchers randomly compared a plan group with a no-plan group and tracked reader trust ratings.	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups.
C. A report measured reader trust ratings after the change but did not say what it was before the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 95

Level 3

Riley wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The measurement was done by an independent team using the same rules before and after.
C. A report measured price disputes after the change but did not say what it was before the plan.	**D.** Riley's friend says the idea feels promising but gives no data about price disputes.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 96

Level 3

Maya wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. Results from several similar places were checked with the same measure of noise complaints from guest rooms.	**B.** A report measured noise complaints from guest rooms after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Maya's friend says the idea feels promising but gives no data about noise complaints from guest rooms.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

Avery wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Avery's friend says the idea feels promising but gives no data about late-shift commute complaints.	**D.** Results from several similar places were checked with the same measure of late-shift commute complaints.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 98

Level 4

Taylor wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups.
C. A study write-up included the sample size, method, and results for classroom disruption reports.	**D.** Taylor's friend says the idea feels promising but gives no data about classroom disruption reports.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 99

Level 4

Morgan wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Researchers used a large sample and checked missed-dose reports both before and after the change.
C. A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups.	**D.** Morgan's friend says the idea feels promising but gives no data about missed-dose reports.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 100

Level 4

Casey wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment.	**B.** A report measured staff resignations after the change but did not say what it was before the plan.
C. A brochure explains how testing a Monday-through-Thursday workweek would work but does not measure staff resignations or compare groups.	**D.** Casey's friend says the idea feels promising but gives no data about staff resignations.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 101

Level 4

Jordan wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. A brochure explains how adding larger unit-price labels on shelf tags would work but does not measure shopper overpayment complaints or compare groups.	**B.** Jordan's friend says the idea feels promising but gives no data about shopper overpayment complaints.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** The measurement was done by an independent team using the same rules before and after.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 102

Level 4

Riley wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan.	**B.** A brochure explains how waiving late fines for children's books would work but does not measure library card renewals or compare groups.
C. Comparable sites each tried the plan and used the same method to track library card renewals.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 103

Level 4

Maya wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. Maya's friend says the idea feels promising but gives no data about admin account takeovers.	**B.** The evidence states who was measured, how the comparison worked, and what changed in admin account takeovers.
C. A report measured admin account takeovers after the change but did not say what it was before the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 104

Level 4

Sam wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. The evidence covers many cases and measures reported thefts on both sides of the change.	**B.** Sam's friend says the idea feels promising but gives no data about reported thefts.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 105

Level 4

Avery wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A fair random comparison measured course pass rates in both the plan group and the no-plan group.
C. A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups.	**D.** Avery's friend says the idea feels promising but gives no data about course pass rates.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 106

Level 4

Taylor wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. People outside the project collected comparable before-and-after data on dessert orders.	**B.** Taylor's friend says the idea feels promising but gives no data about dessert orders.
C. A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 107

Level 4

Morgan wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Several similar settings tried the plan, and each one measured overdraft fees the same way.	**B.** A report measured overdraft fees after the change but did not say what it was before the plan.
C. Morgan's friend says the idea feels promising but gives no data about overdraft fees.	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 108

Level 4

Casey wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The study reported its sample size, comparison method, and results for trail crowding complaints.
C. A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups.	**D.** A report measured trail crowding complaints after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 109

Level 4

Jordan wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Jordan's friend says the idea feels promising but gives no data about family visits.	**B.** A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups.
C. A large, fair study measured family visits before and after the change.	**D.** A report measured family visits after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 110

Level 4

Riley wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. A report measured repeat head injuries after the change but did not say what it was before the plan.	**B.** Riley's friend says the idea feels promising but gives no data about repeat head injuries.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A random test compared similar groups with and without the change, then measured repeat head injuries.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 111

Level 4

Maya wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Independent researchers used the same method to measure donor retention before and after the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups.	**D.** A report measured donor retention after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 112

Level 4

Sam wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups.	**B.** The plan was tried in several similar places, with back-injury claims measured consistently in each one.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A report measured back-injury claims after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 113

Level 4

Avery wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups.	**B.** A report measured landfill waste from participating buildings after the change but did not say what it was before the plan.
C. The report gave the sample size, comparison method, and measured result for landfill waste from participating buildings.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 114

Level 4

Taylor wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Taylor's friend says the idea feels promising but gives no data about publicly visible profiles.
C. A report measured publicly visible profiles after the change but did not say what it was before the plan.	**D.** Many people were included, and researchers measured publicly visible profiles before and after the plan.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 115

Level 4

Morgan wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Similar groups were randomly assigned to use or not use the plan, then patient no-show rates was measured.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Morgan's friend says the idea feels promising but gives no data about patient no-show rates.	**D.** A report measured patient no-show rates after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 116

Level 4

Casey wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A report measured average boarding time after the change but did not say what it was before the plan.	**B.** A team not connected to the proposal measured average boarding time with the same method each time.
C. Casey's friend says the idea feels promising but gives no data about average boarding time.	**D.** A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 117

Level 4

Jordan wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Multiple similar settings tracked unresolved repair requests using the same method after trying the plan.
C. A report measured unresolved repair requests after the change but did not say what it was before the plan.	**D.** A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 118

Level 4

Riley wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. Researchers listed how many cases were studied, how they compared them, and what happened to fruit purchases.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups.	**D.** Riley's friend says the idea feels promising but gives no data about fruit purchases.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 119

Level 4

Maya wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. A report measured customer complaint rates after the change but did not say what it was before the plan.	**B.** A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups.
C. Maya's friend says the idea feels promising but gives no data about customer complaint rates.	**D.** A fair before-and-after study used a large sample to track customer complaint rates.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 120

Level 4

Sam wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups.
C. Researchers randomly compared a plan group with a no-plan group and tracked average household water use.	**D.** A report measured average household water use after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 121

Level 4

Avery wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. A brochure explains how sending body-camera activation reminders before patrol shifts would work but does not measure missing-camera-footage reports or compare groups.	**B.** Outside researchers checked missing-camera-footage reports before and after the plan using a consistent method.
C. Avery's friend says the idea feels promising but gives no data about missing-camera-footage reports.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 122

Level 4

Taylor wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. Results from several similar places were checked with the same measure of phone calls asking ballot status.	**B.** A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups.
C. A report measured phone calls asking ballot status after the change but did not say what it was before the plan.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 123

Level 4

Morgan wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Morgan's friend says the idea feels promising but gives no data about vocabulary retention quiz scores.	**D.** A study write-up included the sample size, method, and results for vocabulary retention quiz scores.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 124

Level 4

Casey wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured new-member cancellations after the change but did not say what it was before the plan.
C. Researchers used a large sample and checked new-member cancellations both before and after the change.	**D.** Casey's friend says the idea feels promising but gives no data about new-member cancellations.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 125

Level 4

Jordan wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. A brochure explains how sending weekly safe-driving feedback would work but does not measure reported minor crashes or compare groups.	**B.** A report measured reported minor crashes after the change but did not say what it was before the plan.
C. Jordan's friend says the idea feels promising but gives no data about reported minor crashes.	**D.** The plan was tested against a similar no-plan group chosen by random assignment.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 126

Level 4

Riley wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A report measured reader trust ratings after the change but did not say what it was before the plan.	**B.** A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups.
C. The measurement was done by an independent team using the same rules before and after.	**D.** Riley's friend says the idea feels promising but gives no data about reader trust ratings.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 127

Level 4

Maya wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured price disputes after the change but did not say what it was before the plan.
C. Comparable sites each tried the plan and used the same method to track price disputes.	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 128

Level 4

Sam wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups.
C. A report measured noise complaints from guest rooms after the change but did not say what it was before the plan.	**D.** The evidence states who was measured, how the comparison worked, and what changed in noise complaints from guest rooms.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

Taylor wants to know whether the proposal to extend evening bus service until midnight actually helps late-shift workers by reducing late-shift commute complaints. Which evidence would be strongest?

A. The evidence states who was measured, how the comparison worked, and what changed in late-shift commute complaints.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A report measured late-shift commute complaints after the change but did not say what it was before the plan.	**D.** A brochure explains how extending evening bus service until midnight would work but does not measure late-shift commute complaints or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 130

Level 5

Morgan wants to know whether the proposal to require phone lockers during class actually helps ninth-grade students by reducing classroom disruption reports. Which evidence would be strongest?

A. A report measured classroom disruption reports after the change but did not say what it was before the plan.	**B.** The evidence covers many cases and measures classroom disruption reports on both sides of the change.
C. A brochure explains how requiring phone lockers during class would work but does not measure classroom disruption reports or compare groups.	**D.** Morgan's friend says the idea feels promising but gives no data about classroom disruption reports.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 131

Level 5

Casey wants to know whether the proposal to send medication reminder texts before evening doses actually helps patients over 60 by reducing missed-dose reports. Which evidence would be strongest?

A. A brochure explains how sending medication reminder texts before evening doses would work but does not measure missed-dose reports or compare groups.	**B.** Casey's friend says the idea feels promising but gives no data about missed-dose reports.
C. A fair random comparison measured missed-dose reports in both the plan group and the no-plan group.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 132

Level 5

Jordan wants to know whether the proposal to test a Monday-through-Thursday workweek actually helps software engineers by reducing staff resignations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured staff resignations after the change but did not say what it was before the plan.
C. Jordan's friend says the idea feels promising but gives no data about staff resignations.	**D.** People outside the project collected comparable before-and-after data on staff resignations.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 133

Level 5

Riley wants to know whether the proposal to add larger unit-price labels on shelf tags actually helps weekly grocery shoppers by reducing shopper overpayment complaints. Which evidence would be strongest?

A. Comparable sites each tried the plan and used the same method to track shopper overpayment complaints.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A report measured shopper overpayment complaints after the change but did not say what it was before the plan.	**D.** Riley's friend says the idea feels promising but gives no data about shopper overpayment complaints.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 134

Level 5

Maya wants to know whether the proposal to waive late fines for children's books actually helps families checking out children's books by increasing library card renewals. Which evidence would be strongest?

A. A report measured library card renewals after the change but did not say what it was before the plan.	**B.** The study reported its sample size, comparison method, and results for library card renewals.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** Maya's friend says the idea feels promising but gives no data about library card renewals.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 135

Level 5

Sam wants to know whether the proposal to require two-factor login for site administrators actually helps site administrators by reducing admin account takeovers. Which evidence would be strongest?

A. A report measured admin account takeovers after the change but did not say what it was before the plan.	**B.** Sam's friend says the idea feels promising but gives no data about admin account takeovers.
C. A large, fair study measured admin account takeovers before and after the change.	**D.** A brochure explains how requiring two-factor login for site administrators would work but does not measure admin account takeovers or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 136

Level 5

Avery wants to know whether the proposal to add brighter LED streetlights on Maple Street actually helps residents on Maple Street by reducing reported thefts. Which evidence would be strongest?

A. A brochure explains how adding brighter LED streetlights on Maple Street would work but does not measure reported thefts or compare groups.	**B.** A report measured reported thefts after the change but did not say what it was before the plan.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A random test compared similar groups with and without the change, then measured reported thefts.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 137

Level 5

Taylor wants to know whether the proposal to expand peer tutoring in statistics actually helps first-year statistics students by increasing course pass rates. Which evidence would be strongest?

A. Independent researchers used the same method to measure course pass rates before and after the plan.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. Taylor's friend says the idea feels promising but gives no data about course pass rates.	**D.** A brochure explains how expanding peer tutoring in statistics would work but does not measure course pass rates or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 138

Level 5

Morgan wants to know whether the proposal to show calorie labels on printed lunch menus actually helps lunch customers by reducing dessert orders. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Several similar settings tried the plan, and each one measured dessert orders the same way.
C. Morgan's friend says the idea feels promising but gives no data about dessert orders.	**D.** A brochure explains how showing calorie labels on printed lunch menus would work but does not measure dessert orders or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 139

Level 5

Casey wants to know whether the proposal to send overdraft warning texts before fees post actually helps checking-account customers by reducing overdraft fees. Which evidence would be strongest?

A. Casey's friend says the idea feels promising but gives no data about overdraft fees.	**B.** The report gave the sample size, comparison method, and measured result for overdraft fees.
C. A report measured overdraft fees after the change but did not say what it was before the plan.	**D.** A brochure explains how sending overdraft warning texts before fees post would work but does not measure overdraft fees or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 140

Level 5

Jordan wants to know whether the proposal to use timed-entry passes for weekend trail visits actually helps weekend trail hikers by reducing trail crowding complaints. Which evidence would be strongest?

A. Many people were included, and researchers measured trail crowding complaints before and after the plan.	**B.** Jordan's friend says the idea feels promising but gives no data about trail crowding complaints.
C. A report measured trail crowding complaints after the change but did not say what it was before the plan.	**D.** A brochure explains how using timed-entry passes for weekend trail visits would work but does not measure trail crowding complaints or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 141

Level 5

Riley wants to know whether the proposal to offer free admission on Fridays actually helps local families by increasing family visits. Which evidence would be strongest?

A. Riley's friend says the idea feels promising but gives no data about family visits.	**B.** A report measured family visits after the change but did not say what it was before the plan.
C. A brochure explains how offering free admission on Fridays would work but does not measure family visits or compare groups.	**D.** Similar groups were randomly assigned to use or not use the plan, then family visits was measured.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 142

Level 5

Maya wants to know whether the proposal to add mandatory sideline concussion checks actually helps youth soccer players by reducing repeat head injuries. Which evidence would be strongest?

A. A brochure explains how adding mandatory sideline concussion checks would work but does not measure repeat head injuries or compare groups.	**B.** Maya's friend says the idea feels promising but gives no data about repeat head injuries.
C. A team not connected to the proposal measured repeat head injuries with the same method each time.	**D.** A report measured repeat head injuries after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 143

Level 5

Sam wants to know whether the proposal to send donation receipts within one day actually helps first-time donors by increasing donor retention. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The plan was tried in several similar places, with donor retention measured consistently in each one.
C. A brochure explains how sending donation receipts within one day would work but does not measure donor retention or compare groups.	**D.** A report measured donor retention after the change but did not say what it was before the plan.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 144

Level 5

Avery wants to know whether the proposal to offer monthly lifting-safety and ergonomic training actually helps warehouse staff by reducing back-injury claims. Which evidence would be strongest?

A. Researchers listed how many cases were studied, how they compared them, and what happened to back-injury claims.	**B.** A report measured back-injury claims after the change but did not say what it was before the plan.
C. A brochure explains how offering monthly lifting-safety and ergonomic training would work but does not measure back-injury claims or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 145

Level 5

Taylor wants to know whether the proposal to place compost bins in apartment lobbies actually helps apartment residents by reducing landfill waste from participating buildings. Which evidence would be strongest?

A. A report measured landfill waste from participating buildings after the change but did not say what it was before the plan.	**B.** A brochure explains how placing compost bins in apartment lobbies would work but does not measure landfill waste from participating buildings or compare groups.
C. Three people on social media say they like the idea after hearing about it, but no results are reported.	**D.** A fair before-and-after study used a large sample to track landfill waste from participating buildings.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 146

Level 5

Morgan wants to know whether the proposal to make new user profiles private by default actually helps new app users by reducing publicly visible profiles. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Morgan's friend says the idea feels promising but gives no data about publicly visible profiles.
C. Researchers randomly compared a plan group with a no-plan group and tracked publicly visible profiles.	**D.** A brochure explains how making new user profiles private by default would work but does not measure publicly visible profiles or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 147

Level 5

Casey wants to know whether the proposal to reserve same-day appointment slots actually helps primary-care patients by reducing patient no-show rates. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A brochure explains how reserving same-day appointment slots would work but does not measure patient no-show rates or compare groups.
C. Casey's friend says the idea feels promising but gives no data about patient no-show rates.	**D.** Outside researchers checked patient no-show rates before and after the plan using a consistent method.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 148

Level 5

Jordan wants to know whether the proposal to board passengers by seat zone actually helps domestic flight passengers by reducing average boarding time. Which evidence would be strongest?

A. A report measured average boarding time after the change but did not say what it was before the plan.	**B.** Jordan's friend says the idea feels promising but gives no data about average boarding time.
C. Multiple similar settings tracked average boarding time using the same method after trying the plan.	**D.** A brochure explains how boarding passengers by seat zone would work but does not measure average boarding time or compare groups.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 149

Level 5

Riley wants to know whether the proposal to launch an online apartment repair portal actually helps apartment tenants by reducing unresolved repair requests. Which evidence would be strongest?

A. A brochure explains how launching an online apartment repair portal would work but does not measure unresolved repair requests or compare groups.	**B.** Riley's friend says the idea feels promising but gives no data about unresolved repair requests.
C. A study write-up included the sample size, method, and results for unresolved repair requests.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 150

Level 5

Maya wants to know whether the proposal to move fruit bowls to the front of the cafeteria line actually helps middle-school students by increasing fruit purchases. Which evidence would be strongest?

A. A report measured fruit purchases after the change but did not say what it was before the plan.	**B.** Maya's friend says the idea feels promising but gives no data about fruit purchases.
C. A brochure explains how moving fruit bowls to the front of the cafeteria line would work but does not measure fruit purchases or compare groups.	**D.** Researchers used a large sample and checked fruit purchases both before and after the change.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 151

Level 5

Sam wants to know whether the proposal to give support agents weekly script coaching actually helps support agents by reducing customer complaint rates. Which evidence would be strongest?

A. The plan was tested against a similar no-plan group chosen by random assignment.	**B.** Sam's friend says the idea feels promising but gives no data about customer complaint rates.
C. A brochure explains how giving support agents weekly script coaching would work but does not measure customer complaint rates or compare groups.	**D.** Three people on social media say they like the idea after hearing about it, but no results are reported.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

Question 152

Level 5

Avery wants to know whether the proposal to send automatic household water-leak alerts actually helps local homeowners by reducing average household water use. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The measurement was done by an independent team using the same rules before and after.
C. Avery's friend says the idea feels promising but gives no data about average household water use.	**D.** A brochure explains how sending automatic household water-leak alerts would work but does not measure average household water use or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 153

Level 5

Taylor wants to know whether the proposal to send body-camera activation reminders before patrol shifts actually helps patrol officers by reducing missing-camera-footage reports. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Taylor's friend says the idea feels promising but gives no data about missing-camera-footage reports.
C. Results from several similar places were checked with the same measure of missing-camera-footage reports.	**D.** A report measured missing-camera-footage reports after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 154

Level 5

Morgan wants to know whether the proposal to offer online mail-ballot tracking actually helps mail voters by reducing phone calls asking ballot status. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A report measured phone calls asking ballot status after the change but did not say what it was before the plan.
C. A brochure explains how offering online mail-ballot tracking would work but does not measure phone calls asking ballot status or compare groups.	**D.** The evidence states who was measured, how the comparison worked, and what changed in phone calls asking ballot status.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

C. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 155

Level 5

Casey wants to know whether the proposal to send spaced-review prompts for language vocabulary actually helps language learners by increasing vocabulary retention quiz scores. Which evidence would be strongest?

A. The evidence covers many cases and measures vocabulary retention quiz scores on both sides of the change.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A report measured vocabulary retention quiz scores after the change but did not say what it was before the plan.	**D.** A brochure explains how sending spaced-review prompts for language vocabulary would work but does not measure vocabulary retention quiz scores or compare groups.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 156

Level 5

Jordan wants to know whether the proposal to offer a beginner gym orientation actually helps new gym members by reducing new-member cancellations. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** A fair random comparison measured new-member cancellations in both the plan group and the no-plan group.
C. A report measured new-member cancellations after the change but did not say what it was before the plan.	**D.** Jordan's friend says the idea feels promising but gives no data about new-member cancellations.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

Question 157

Level 5

Riley wants to know whether the proposal to send weekly safe-driving feedback actually helps auto-insurance policyholders by reducing reported minor crashes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** Riley's friend says the idea feels promising but gives no data about reported minor crashes.
C. People outside the project collected comparable before-and-after data on reported minor crashes.	**D.** A report measured reported minor crashes after the change but did not say what it was before the plan.

Answer: C. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is C because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

C. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Question 158

Level 5

Maya wants to know whether the proposal to place corrections at the top of articles actually helps newsletter readers by increasing reader trust ratings. Which evidence would be strongest?

A. A brochure explains how placing corrections at the top of articles would work but does not measure reader trust ratings or compare groups.	**B.** Three people on social media say they like the idea after hearing about it, but no results are reported.
C. A report measured reader trust ratings after the change but did not say what it was before the plan.	**D.** Comparable sites each tried the plan and used the same method to track reader trust ratings.

Answer: D. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is D because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

B. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

C. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

D. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

Question 159

Level 5

Sam wants to know whether the proposal to require clearer price signs at vendor stalls actually helps weekend farmers market shoppers by reducing price disputes. Which evidence would be strongest?

A. Three people on social media say they like the idea after hearing about it, but no results are reported.	**B.** The study reported its sample size, comparison method, and results for price disputes.
C. Sam's friend says the idea feels promising but gives no data about price disputes.	**D.** A brochure explains how requiring clearer price signs at vendor stalls would work but does not measure price disputes or compare groups.

Answer: B. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is B because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Not correct. A few reactions on social media are too thin and unmeasured to be strong evidence about the result.

B. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

Question 160

Level 5

Avery wants to know whether the proposal to send quiet-hours text reminders to hotel guests actually helps overnight hotel guests by reducing noise complaints from guest rooms. Which evidence would be strongest?

A. A large, fair study measured noise complaints from guest rooms before and after the change.	**B.** A brochure explains how sending quiet-hours text reminders to hotel guests would work but does not measure noise complaints from guest rooms or compare groups.
C. Avery's friend says the idea feels promising but gives no data about noise complaints from guest rooms.	**D.** A report measured noise complaints from guest rooms after the change but did not say what it was before the plan.

Answer: A. The strongest option measures the result in a fair way, often with a comparison group.

How to work it out. To uncover the answer, compare how directly and fairly each option tests the claim. The correct choice is A because it gives stronger measurement, comparison, sample, or method than the alternatives.

A. Correct. This is the strongest evidence because it measures the claimed result in a fairer way, usually with a larger sample, a comparison, repeated settings, or a clear method.

B. Not correct. A brochure can explain how a plan is supposed to work, but explanation is not the same as evidence that it did work.

C. Not correct. A friend's impression is weak evidence because it gives no measured result and no fair comparison.

D. Not correct. Measuring only after the change leaves out the baseline, so it is hard to tell whether anything improved.

Skill 07

Check Source Reliability

Can We Trust the Source?

Judge a source using expertise, motives, method, and openness. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	How much trust should we place in this source, and why?
Why it matters	A source can be wrong because it lacks expertise, hides its method, samples badly, or has strong pressure to reach a certain answer. Source checks do not replace evidence checks; they tell us how carefully to treat the evidence.
Conceptual core	Source reliability is not a vibe check. It is a structured judgment about expertise, method, independence, transparency, and track record. Students should learn that a source with a possible interest is not automatically wrong, and a source without an obvious interest is not automatically right. The question is how the source's position affects the weight we should give its claim.
Student method	Ask four questions: Does the source know the topic? Does it show the method? Does it have a reason to tilt the result? Does it include inconvenient information?
Analogy	A source is like a witness. You ask what they saw, how close they were, what they know, and whether they have a reason to shade the story.
Assessment focus	A good answer names the reliability issue precisely: expertise, method, sampling, independence, transparency, or track record.

Teaching Sequence

1. Ask whether the source has relevant knowledge or access.

2. Look for a clear method, sample, and data path.

3. Check whether the source has pressure, incentives, or commitments that could slant judgment.

4. Value sources that show limitations or inconvenient evidence.

Common Confusions To Watch For

1. Students may treat motive as proof of falsehood rather than a reason for caution.

2. Students may trust impressive titles even when the topic is outside the person's expertise.

3. Students may ignore missing methods because the conclusion sounds reasonable.

Teacher Prompts

1. What does this source know, and how would it know?

2. What method is visible?

3. What reason might this source have to leave something out?

Worked Example

Scenario	A company claims its study shows its app improves sleep, but the report does not say how users were selected or how sleep was measured.
Teacher think-aloud	The problem is not just that the company benefits. The missing method makes the claim hard to check, and the source's incentive gives us another reason to ask for transparency.
Student takeaway	Reliability grows when expertise, method, and openness are visible.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. An app seller says its product improves sleep, citing 12 testimonials with no recruitment details or sleep measure. A university team studies the same app: 200 adults are randomly assigned to app or no-app groups, sleep is measured identically, and the complete results and funding are disclosed. No result figures are supplied here; you are judging how checkable the sources are.

What To Do

1. Make a two-row chart, one row per source, with columns for participant selection, measurement, comparison group, and disclosed interests.

2. Write 'not supplied' wherever the scenario lacks a detail; do not invent it.

3. Write two sentences identifying which report is easier to check and why a seller's financial interest is a reason for scrutiny rather than automatic disproof.

Check before reading the answer. Did you compare reporting methods rather than trust the university's name or reject the seller's identity alone?

Model Answer

Seller: selection not supplied; sleep measure not supplied; no comparison group described; sells the app. University: recruitment details not supplied, but random group assignment stated; common sleep measure; app/no-app comparison; funding disclosed. The university report is easier to inspect because it describes methods and a comparison. The seller has an incentive to promote the product, but that incentive alone does not prove its claim false.

Why it is adequate. It distinguishes known details from missing ones and treats incentives and methods as evidence to examine, not shortcuts to a verdict.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

Riley reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The author is a transportation expert who has studied similar programs.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 2

Level 1

Maya reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report does not say how the data was gathered.
C. The author is an education expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 3

Level 1

Sam reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Sam trust the report less?

A. The author has no relevant expertise and cites no one who does.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a health expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 4

Level 1

Avery reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Avery trust the report less?

A. The author is a workplace expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report leaves out results that went against its conclusion.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 5

Level 1

Taylor reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The author is a retail expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 6

Level 1

Morgan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author works for a firm bidding to run part of the plan.
C. The author is a public services expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 7

Level 1

Casey reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Casey trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 8

Level 1

Jordan reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Jordan trust the report less?

A. The author is a public safety expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 9

Level 1

Riley reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Riley trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author reports only the best month and skips weaker months.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 10

Level 1

Maya reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The survey came from a signup list for fans of the proposal.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 11

Level 1

Sam reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a finance expert who has studied similar programs.	**D.** The report was sponsored by a supplier that could be hired if the plan passed.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 12

Level 1

Avery reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Avery trust the report less?

A. The report never explains who was surveyed or how they were chosen.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an environment expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 13

Level 1

Taylor reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report is written by a publicity intern with no background in the field.
C. The author is a culture expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 14

Level 1

Morgan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a sports expert who has studied similar programs.
C. The report mentions successes but leaves out failed trials of the same plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 15

Level 1

Casey reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The author is a nonprofit expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 16

Level 1

Jordan reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Jordan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a workplace safety expert who has studied similar programs.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 17

Level 1

Riley reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The methods section is missing, so readers cannot check the process.
C. The author is an environment expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 18

Level 1

Maya reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Maya trust the report less?

A. The author is a technology expert who has studied similar programs.	**B.** The report names who collected the data.
C. No expert source is named, even though the report makes technical claims.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 19

Level 1

Sam reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Sam trust the report less?

A. The author is a health expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 20

Level 1

Avery reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Avery trust the report less?

A. The sample was drawn from a meeting organized by supporters of the plan.	**B.** The report names who collected the data.
C. The author is a travel expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 21

Level 1

Taylor reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Taylor trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The publisher sells products connected to the recommendation.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 22

Level 1

Morgan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report gives a conclusion but no way to inspect the raw data.
C. The author is a food expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 23

Level 1

Casey reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Casey trust the report less?

A. The author gives no qualifications for judging this kind of plan.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a customer support expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 24

Level 1

Jordan reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Jordan trust the report less?

A. The author is an utilities expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 25

Level 1

Riley reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Riley trust the report less?

A. The author is a governance expert who has studied similar programs.	**B.** The report names who collected the data.
C. Only people who had already benefited from the plan were surveyed.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 26

Level 1

Maya reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The report comes from a group seeking the contract created by the plan.
C. The author is an election administration expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 27

Level 1

Sam reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Sam trust the report less?

A. The report does not say how the data was gathered.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a learning expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 28

Level 1

Avery reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Avery trust the report less?

A. The author is a fitness expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author has no relevant expertise and cites no one who does.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 29

Level 1

Taylor reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report leaves out results that went against its conclusion.	**D.** The author is an insurance expert who has studied similar programs.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 30

Level 1

Morgan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The survey only included people who already supported the plan.
C. The report names who collected the data.	**D.** The author is a media expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 31

Level 1

Casey reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a local commerce expert who has studied similar programs.
C. The report names who collected the data.	**D.** A company that sells services tied to the recommendation helped write the report.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 32

Level 1

Jordan reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Jordan trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The author is a hospitality expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a transportation expert who has studied similar programs.
C. The report gives results but no sample size, dates, or data source.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 34

Level 2

Sam reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 35

Level 2

Avery reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Avery trust the report less?

A. The author reports only the best month and skips weaker months.	**B.** The author is a health expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 36

Level 2

Taylor reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The survey came from a signup list for fans of the proposal.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a workplace expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 37

Level 2

Morgan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. The author works for a firm bidding to run part of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 38

Level 2

Casey reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a public services expert who has studied similar programs.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 39

Level 2

Jordan reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Jordan trust the report less?

A. The report is written by a publicity intern with no background in the field.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 40

Level 2

Riley reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Riley trust the report less?

A. The author is a public safety expert who has studied similar programs.	**B.** The report mentions successes but leaves out failed trials of the same plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 41

Level 2

Maya reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Maya trust the report less?

A. People who disliked the plan were not invited to answer the survey.	**B.** The author is an education expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 42

Level 2

Sam reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report was sponsored by a supplier that could be hired if the plan passed.
C. The report names who collected the data.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 43

Level 2

Avery reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Avery trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The methods section is missing, so readers cannot check the process.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 44

Level 2

Taylor reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** No expert source is named, even though the report makes technical claims.
C. The author is an environment expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 45

Level 2

Morgan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a culture expert who has studied similar programs.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 46

Level 2

Casey reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a sports expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 47

Level 2

Jordan reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Jordan trust the report less?

A. The report names who collected the data.	**B.** A consultant who helped design the plan was paid to evaluate it.
C. The author is a nonprofit expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 48

Level 2

Riley reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data.	**B.** The report names who collected the data.
C. The author is a workplace safety expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 49

Level 2

Maya reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The author gives no qualifications for judging this kind of plan.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 50

Level 2

Sam reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Sam trust the report less?

A. The author is a technology expert who has studied similar programs.	**B.** The report names who collected the data.
C. The chart starts after the worst results had already happened.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 51

Level 2

Avery reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Avery trust the report less?

A. The author is a health expert who has studied similar programs.	**B.** Only people who had already benefited from the plan were surveyed.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 52

Level 2

Taylor reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a travel expert who has studied similar programs.	**D.** The publisher sells products connected to the recommendation.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 53

Level 2

Morgan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Morgan trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 54

Level 2

Casey reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Casey trust the report less?

A. The author has no relevant expertise and cites no one who does.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a food expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 55

Level 2

Jordan reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Jordan trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report names who collected the data.
C. The author is a customer support expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 56

Level 2

Riley reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The survey only included people who already supported the plan.
C. The report names who collected the data.	**D.** The author is an utilities expert who has studied similar programs.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 57

Level 2

Maya reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Maya trust the report less?

A. The report comes from a group seeking the contract created by the plan.	**B.** The report names who collected the data.
C. The author is a governance expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 58

Level 2

Sam reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report gives results but no sample size, dates, or data source.
C. The author is an election administration expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 59

Level 2

Avery reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Avery trust the report less?

A. The author is a learning expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author works outside the topic area and does not quote experts.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 60

Level 2

Taylor reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a fitness expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author reports only the best month and skips weaker months.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 61

Level 2

Morgan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Morgan trust the report less?

A. The survey came from a signup list for fans of the proposal.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an insurance expert who has studied similar programs.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 62

Level 2

Casey reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a media expert who has studied similar programs.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 63

Level 2

Jordan reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Jordan trust the report less?

A. The report names who collected the data.	**B.** The author is a local commerce expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 64

Level 2

Riley reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a hospitality expert who has studied similar programs.
C. The report is written by a publicity intern with no background in the field.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

Sam reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Sam trust the report less?

A. The author is a transportation expert who has studied similar programs.	**B.** The report is written by a publicity intern with no background in the field.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 66

Level 3

Avery reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Avery trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 67

Level 3

Taylor reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a health expert who has studied similar programs.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 68

Level 3

Morgan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Morgan trust the report less?

A. The author is a workplace expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report was sponsored by a supplier that could be hired if the plan passed.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 69

Level 3

Casey reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Casey trust the report less?

A. The author is a retail expert who has studied similar programs.	**B.** The report never explains who was surveyed or how they were chosen.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 70

Level 3

Jordan reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Jordan trust the report less?

A. No expert source is named, even though the report makes technical claims.	**B.** The author is a public services expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 71

Level 3

Riley reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a technology expert who has studied similar programs.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 72

Level 3

Maya reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a public safety expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 73

Level 3

Sam reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Sam trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** A consultant who helped design the plan was paid to evaluate it.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 74

Level 3

Avery reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Avery trust the report less?

A. The methods section is missing, so readers cannot check the process.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a nutrition expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 75

Level 3

Taylor reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Taylor trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author gives no qualifications for judging this kind of plan.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 76

Level 3

Morgan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is an environment expert who has studied similar programs.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 77

Level 3

Casey reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Casey trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The author is a culture expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 78

Level 3

Jordan reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The publisher sells products connected to the recommendation.
C. The author is a sports expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 79

Level 3

Riley reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Riley trust the report less?

A. The report gives a conclusion but no way to inspect the raw data.	**B.** The author is a nonprofit expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 80

Level 3

Maya reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The author is a workplace safety expert who has studied similar programs.
C. The author has no relevant expertise and cites no one who does.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 81

Level 3

Sam reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Sam trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is an environment expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 82

Level 3

Avery reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The author is a technology expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 83

Level 3

Taylor reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Taylor trust the report less?

A. The report comes from a group seeking the contract created by the plan.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a health expert who has studied similar programs.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 84

Level 3

Morgan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a travel expert who has studied similar programs.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 85

Level 3

Casey reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Casey trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author works outside the topic area and does not quote experts.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 86

Level 3

Jordan reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author reports only the best month and skips weaker months.
C. The report names who collected the data.	**D.** The author is a food expert who has studied similar programs.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 87

Level 3

Riley reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Riley trust the report less?

A. The author is a customer support expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The survey came from a signup list for fans of the proposal.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 88

Level 3

Maya reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The author is an utilities expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 89

Level 3

Sam reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Sam trust the report less?

A. The author is a governance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report gives results but no sample size, dates, or data source.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 90

Level 3

Avery reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Avery trust the report less?

A. The report names who collected the data.	**B.** The report is written by a publicity intern with no background in the field.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an election administration expert who has studied similar programs.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 91

Level 3

Taylor reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Taylor trust the report less?

A. The author is a learning expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report mentions successes but leaves out failed trials of the same plan.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 92

Level 3

Morgan reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** People who disliked the plan were not invited to answer the survey.
C. The author is a fitness expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 93

Level 3

Casey reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author works for a firm bidding to run part of the plan.
C. The report names who collected the data.	**D.** The author is an insurance expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 94

Level 3

Jordan reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Jordan trust the report less?

A. The report never explains who was surveyed or how they were chosen.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a media expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 95

Level 3

Riley reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The author is a local commerce expert who has studied similar programs.
C. No expert source is named, even though the report makes technical claims.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 96

Level 3

Maya reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Maya trust the report less?

A. The author is a hospitality expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** Several negative results were collected but not included in the summary.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

Avery reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. Several negative results were collected but not included in the summary.	**D.** The author is a transportation expert who has studied similar programs.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 98

Level 4

Taylor reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Taylor trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an education expert who has studied similar programs.
C. The report names who collected the data.	**D.** The sample was drawn from a meeting organized by supporters of the plan.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 99

Level 4

Morgan reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Morgan trust the report less?

A. A consultant who helped design the plan was paid to evaluate it.	**B.** The author is a health expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 100

Level 4

Casey reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The methods section is missing, so readers cannot check the process.
C. The report names who collected the data.	**D.** The author is a workplace expert who has studied similar programs.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 101

Level 4

Jordan reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. No expert source is named, even though the report makes technical claims.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 102

Level 4

Riley reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a public services expert who has studied similar programs.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 103

Level 4

Maya reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Maya trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 104

Level 4

Sam reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The publisher sells products connected to the recommendation.
C. The author is a public safety expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 105

Level 4

Avery reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Avery trust the report less?

A. The report names who collected the data.	**B.** The author is an education expert who has studied similar programs.
C. The report gives a conclusion but no way to inspect the raw data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 106

Level 4

Taylor reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a nutrition expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author gives no qualifications for judging this kind of plan.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 107

Level 4

Morgan reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Morgan trust the report less?

A. The author is a finance expert who has studied similar programs.	**B.** The report leaves out results that went against its conclusion.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 108

Level 4

Casey reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Casey trust the report less?

A. The survey only included people who already supported the plan.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 109

Level 4

Jordan reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Jordan trust the report less?

A. The author is a culture expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The report comes from a group seeking the contract created by the plan.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 110

Level 4

Riley reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Riley trust the report less?

A. The author is a sports expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report does not say how the data was gathered.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 111

Level 4

Maya reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Maya trust the report less?

A. The author is a nonprofit expert who has studied similar programs.	**B.** The author has no relevant expertise and cites no one who does.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 112

Level 4

Sam reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Sam trust the report less?

A. The author reports only the best month and skips weaker months.	**B.** The author is a workplace safety expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 113

Level 4

Avery reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is an environment expert who has studied similar programs.	**D.** The survey came from a signup list for fans of the proposal.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 114

Level 4

Taylor reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. A company that sells services tied to the recommendation helped write the report.	**D.** The author is a technology expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 115

Level 4

Morgan reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a health expert who has studied similar programs.	**D.** The report gives results but no sample size, dates, or data source.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 116

Level 4

Casey reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Casey trust the report less?

A. The author is a travel expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author works outside the topic area and does not quote experts.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 117

Level 4

Jordan reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Jordan trust the report less?

A. The report mentions successes but leaves out failed trials of the same plan.	**B.** The report names who collected the data.
C. The author is a housing expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 118

Level 4

Riley reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** People who disliked the plan were not invited to answer the survey.
C. The author is a food expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 119

Level 4

Maya reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Maya trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author works for a firm bidding to run part of the plan.	**D.** The author is a customer support expert who has studied similar programs.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 120

Level 4

Sam reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Sam trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is an utilities expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report never explains who was surveyed or how they were chosen.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 121

Level 4

Avery reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Avery trust the report less?

A. The report is written by a publicity intern with no background in the field.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a governance expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 122

Level 4

Taylor reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Taylor trust the report less?

A. The author is an election administration expert who has studied similar programs.	**B.** Several negative results were collected but not included in the summary.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 123

Level 4

Morgan reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Morgan trust the report less?

A. The report names who collected the data.	**B.** The author is a learning expert who has studied similar programs.
C. The sample was drawn from a meeting organized by supporters of the plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 124

Level 4

Casey reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a fitness expert who has studied similar programs.	**D.** The report was sponsored by a supplier that could be hired if the plan passed.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 125

Level 4

Jordan reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Jordan trust the report less?

A. The methods section is missing, so readers cannot check the process.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an insurance expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 126

Level 4

Riley reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Riley trust the report less?

A. The report names who collected the data.	**B.** No expert source is named, even though the report makes technical claims.
C. The author is a media expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 127

Level 4

Maya reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The chart starts after the worst results had already happened.
C. The author is a local commerce expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 128

Level 4

Sam reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Sam trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a hospitality expert who has studied similar programs.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Level 5

Level 5 is for fluency: the learner should now name the thinking move and explain the elimination path.

Question 129

Level 5

Taylor reads a report about evening bus service for late-shift workers. The report recommends that the city council extend evening bus service until midnight, and it claims the plan would reduce late-shift commute complaints. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author is a transportation expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** Only people who had already benefited from the plan were surveyed.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 130

Level 5

Morgan reads a report about classroom phone lockers. The report recommends that the school board require phone lockers during class, and it claims the plan would reduce classroom disruption reports. Which detail would make Morgan trust the report less?

A. The author is an education expert who has studied similar programs.	**B.** The report names who collected the data.
C. The publisher sells products connected to the recommendation.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 131

Level 5

Casey reads a report about medication reminder texts for older patients. The report recommends that the hospital send medication reminder texts before evening doses, and it claims the plan would reduce missed-dose reports. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report gives a conclusion but no way to inspect the raw data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a health expert who has studied similar programs.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 132

Level 5

Jordan reads a report about a four-day workweek test for software engineers. The report recommends that the company test a Monday-through-Thursday workweek, and it claims the plan would reduce staff resignations. Which detail would make Jordan trust the report less?

A. The author gives no qualifications for judging this kind of plan.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author is a workplace expert who has studied similar programs.

Answer: A. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 133

Level 5

Riley reads a report about larger grocery unit-price labels. The report recommends that the grocery chain add larger unit-price labels on shelf tags, and it claims the plan would reduce shopper overpayment complaints. Which detail would make Riley trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The author is a retail expert who has studied similar programs.
C. The report names who collected the data.	**D.** The chart starts after the worst results had already happened.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 134

Level 5

Maya reads a report about late fines on children's books. The report recommends that the library waive late fines for children's books, and it claims the plan would increase library card renewals. Which detail would make Maya trust the report less?

A. The author is a public services expert who has studied similar programs.	**B.** The report names who collected the data.
C. The survey only included people who already supported the plan.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 135

Level 5

Sam reads a report about two-factor login for site administrators. The report recommends that the platform require two-factor login for site administrators, and it claims the plan would reduce admin account takeovers. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The report comes from a group seeking the contract created by the plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a technology expert who has studied similar programs.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 136

Level 5

Avery reads a report about brighter streetlights on Maple Street. The report recommends that the neighborhood association add brighter LED streetlights on Maple Street, and it claims the plan would reduce reported thefts. Which detail would make Avery trust the report less?

A. The report does not say how the data was gathered.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is a public safety expert who has studied similar programs.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 137

Level 5

Taylor reads a report about peer tutoring for first-year statistics students. The report recommends that the university expand peer tutoring in statistics, and it claims the plan would increase course pass rates. Which detail would make Taylor trust the report less?

A. The report names who collected the data.	**B.** The author has no relevant expertise and cites no one who does.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The author is an education expert who has studied similar programs.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 138

Level 5

Morgan reads a report about calorie labels on restaurant menus. The report recommends that the restaurant group show calorie labels on printed lunch menus, and it claims the plan would reduce dessert orders. Which detail would make Morgan trust the report less?

A. The report leaves out results that went against its conclusion.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a nutrition expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 139

Level 5

Casey reads a report about bank overdraft warning texts. The report recommends that the bank send overdraft warning texts before fees post, and it claims the plan would reduce overdraft fees. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The survey came from a signup list for fans of the proposal.	**D.** The author is a finance expert who has studied similar programs.

Answer: C. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 140

Level 5

Jordan reads a report about timed-entry passes for weekend park trails. The report recommends that the park service use timed-entry passes for weekend trail visits, and it claims the plan would reduce trail crowding complaints. Which detail would make Jordan trust the report less?

A. The author is an environment expert who has studied similar programs.	**B.** The report names who collected the data.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** A company that sells services tied to the recommendation helped write the report.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 141

Level 5

Riley reads a report about free Friday museum admission. The report recommends that the museum offer free admission on Fridays, and it claims the plan would increase family visits. Which detail would make Riley trust the report less?

A. The report gives results but no sample size, dates, or data source.	**B.** The author is a culture expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 142

Level 5

Maya reads a report about youth soccer concussion checks. The report recommends that the sports league add mandatory sideline concussion checks, and it claims the plan would reduce repeat head injuries. Which detail would make Maya trust the report less?

A. The report names who collected the data.	**B.** The author works outside the topic area and does not quote experts.
C. The author is a sports expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: B. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 143

Level 5

Sam reads a report about same-day donation receipts. The report recommends that the nonprofit send donation receipts within one day, and it claims the plan would increase donor retention. Which detail would make Sam trust the report less?

A. The author is a nonprofit expert who has studied similar programs.	**B.** The report names who collected the data.
C. The author reports only the best month and skips weaker months.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 144

Level 5

Avery reads a report about warehouse ergonomic training. The report recommends that the warehouse offer monthly lifting-safety and ergonomic training, and it claims the plan would reduce back-injury claims. Which detail would make Avery trust the report less?

A. The author is a workplace safety expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** People who disliked the plan were not invited to answer the survey.

Answer: D. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

Question 145

Level 5

Taylor reads a report about apartment-lobby compost bins. The report recommends that the city sanitation office place compost bins in apartment lobbies, and it claims the plan would reduce landfill waste from participating buildings. Which detail would make Taylor trust the report less?

A. The author works for a firm bidding to run part of the plan.	**B.** The author is an environment expert who has studied similar programs.
C. The report names who collected the data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 146

Level 5

Morgan reads a report about private-by-default app profiles. The report recommends that the app maker make new user profiles private by default, and it claims the plan would reduce publicly visible profiles. Which detail would make Morgan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report never explains who was surveyed or how they were chosen.
C. The author is a technology expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 147

Level 5

Casey reads a report about same-day clinic appointment slots. The report recommends that the clinic reserve same-day appointment slots, and it claims the plan would reduce patient no-show rates. Which detail would make Casey trust the report less?

A. The report names who collected the data.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report is written by a publicity intern with no background in the field.	**D.** The author is a health expert who has studied similar programs.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

Question 148

Level 5

Jordan reads a report about seat-zone airline boarding. The report recommends that the airline board passengers by seat zone, and it claims the plan would reduce average boarding time. Which detail would make Jordan trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a travel expert who has studied similar programs.	**D.** The report mentions successes but leaves out failed trials of the same plan.

Answer: D. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

Question 149

Level 5

Riley reads a report about an online apartment repair portal. The report recommends that the landlord launch an online apartment repair portal, and it claims the plan would reduce unresolved repair requests. Which detail would make Riley trust the report less?

A. The author is a housing expert who has studied similar programs.	**B.** The sample was drawn from a meeting organized by supporters of the plan.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 150

Level 5

Maya reads a report about fruit placement in a school cafeteria line. The report recommends that the cafeteria move fruit bowls to the front of the cafeteria line, and it claims the plan would increase fruit purchases. Which detail would make Maya trust the report less?

A. The report was sponsored by a supplier that could be hired if the plan passed.	**B.** The author is a food expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 151

Level 5

Sam reads a report about weekly call-center script coaching. The report recommends that the call center give support agents weekly script coaching, and it claims the plan would reduce customer complaint rates. Which detail would make Sam trust the report less?

A. The report names who collected the data.	**B.** The author is a customer support expert who has studied similar programs.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The methods section is missing, so readers cannot check the process.

Answer: D. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

Question 152

Level 5

Avery reads a report about household water-leak alerts. The report recommends that the water utility send automatic household water-leak alerts, and it claims the plan would reduce average household water use. Which detail would make Avery trust the report less?

A. The report names who collected the data.	**B.** The author is an utilities expert who has studied similar programs.
C. No expert source is named, even though the report makes technical claims.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 153

Level 5

Taylor reads a report about body-camera activation reminders. The report recommends that the police department send body-camera activation reminders before patrol shifts, and it claims the plan would reduce missing-camera-footage reports. Which detail would make Taylor trust the report less?

A. The author is a governance expert who has studied similar programs.	**B.** Several negative results were collected but not included in the summary.
C. The report lists where the data came from and includes results that do not favor the author.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

C. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 154

Level 5

Morgan reads a report about county mail-ballot tracking. The report recommends that the election office offer online mail-ballot tracking, and it claims the plan would reduce phone calls asking ballot status. Which detail would make Morgan trust the report less?

A. Only people who had already benefited from the plan were surveyed.	**B.** The report names who collected the data.
C. The author is an election administration expert who has studied similar programs.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 155

Level 5

Casey reads a report about language-learning spaced-review prompts. The report recommends that the tutoring app send spaced-review prompts for language vocabulary, and it claims the plan would increase vocabulary retention quiz scores. Which detail would make Casey trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The report names who collected the data.
C. The author is a learning expert who has studied similar programs.	**D.** A consultant who helped design the plan was paid to evaluate it.

Answer: D. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

Question 156

Level 5

Jordan reads a report about a beginner gym orientation. The report recommends that the gym offer a beginner gym orientation, and it claims the plan would reduce new-member cancellations. Which detail would make Jordan trust the report less?

A. The report names who collected the data.	**B.** The author is a fitness expert who has studied similar programs.
C. The report gives a conclusion but no way to inspect the raw data.	**D.** The report lists where the data came from and includes results that do not favor the author.

Answer: C. A source is less trustworthy when readers cannot check its method.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

B. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when readers cannot check its method.

D. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

Question 157

Level 5

Riley reads a report about safe-driving feedback for policyholders. The report recommends that the insurer send weekly safe-driving feedback, and it claims the plan would reduce reported minor crashes. Which detail would make Riley trust the report less?

A. The author is an insurance expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The report names who collected the data.	**D.** The author gives no qualifications for judging this kind of plan.

Answer: D. A source is less trustworthy when it lacks expertise on the topic.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is D because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

D. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it lacks expertise on the topic.

Question 158

Level 5

Maya reads a report about top-of-article correction boxes. The report recommends that the newsroom place corrections at the top of articles, and it claims the plan would increase reader trust ratings. Which detail would make Maya trust the report less?

A. The author is a media expert who has studied similar programs.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The chart starts after the worst results had already happened.	**D.** The report names who collected the data.

Answer: C. A source is less trustworthy when it hides inconvenient evidence.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is C because it gives that kind of warning.

A. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it hides inconvenient evidence.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 159

Level 5

Sam reads a report about clearer farmers market price signs. The report recommends that the farmers market require clearer price signs at vendor stalls, and it claims the plan would reduce price disputes. Which detail would make Sam trust the report less?

A. The survey only included people who already supported the plan.	**B.** The report lists where the data came from and includes results that do not favor the author.
C. The author is a local commerce expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: A. A source is less trustworthy when its sample is tilted toward one answer.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is A because it gives that kind of warning.

A. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when its sample is tilted toward one answer.

B. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Question 160

Level 5

Avery reads a report about hotel quiet-hours text reminders. The report recommends that the hotel send quiet-hours text reminders to hotel guests, and it claims the plan would reduce noise complaints from guest rooms. Which detail would make Avery trust the report less?

A. The report lists where the data came from and includes results that do not favor the author.	**B.** The publisher sells products connected to the recommendation.
C. The author is a hospitality expert who has studied similar programs.	**D.** The report names who collected the data.

Answer: B. A source is less trustworthy when it may profit from the answer it gives.

How to work it out. To uncover the answer, ask what would make the source less trustworthy as a source: weak expertise, hidden method, tilted sample, or pressure to slant the result. The correct choice is B because it gives that kind of warning.

A. Not correct. Openness about data sources and unfavorable results is a trust-building sign, not a warning sign.

B. Correct. This detail gives readers a concrete reason to trust the source less. A source is less trustworthy when it may profit from the answer it gives.

C. Not correct. Relevant expertise usually makes a source more trustworthy, not less, unless there is another problem.

D. Not correct. Naming who collected the data usually makes a report easier to check, so it is not a reason by itself to trust it less.

Skill 08

Detect Logical Gaps

Does the Logic Follow?

Find the step that does not follow. Objective	**160** Items	**Levels 1-5** Difficulty bands

Essential question	Does the conclusion really follow from the evidence?
Why it matters	A logical gap appears when the conclusion reaches farther than the evidence. The facts may be true, the source may be decent, and the wording may be clear, yet the argument still may not follow.
Conceptual core	Logical gaps occur when the evidence is asked to do more than it can do. Students should learn to compare the exact scope of the evidence with the exact scope of the conclusion. Gaps often involve quantity, time, group, certainty, causation, or universality. This skill is not about whether the conclusion is false; it is about whether this argument has earned it.
Student method	Compare what the evidence says with what the conclusion adds. Watch for jumps from some to all, average to every person, possible to certain, or before-after to caused-by.
Analogy	Logic is a staircase. A gap is a missing step; you may see the upper floor, but you cannot simply pretend the step is there.
Assessment focus	A good answer identifies the precise leap from evidence to conclusion rather than attacking the topic generally.

Teaching Sequence

1. State what the evidence actually shows in one careful sentence.

2. State what the conclusion adds.

3. Look for jumps from some to all, possible to certain, short term to long term, or one group to another.

4. Choose the answer that names the unsupported jump.

Common Confusions To Watch For

1. Students may reject a conclusion because they dislike it rather than because it fails to follow.

2. Students may accept a conclusion because the evidence is true.

3. Students may overlook small words like all, always, only, or proves.

Teacher Prompts

1. What does the evidence show only?

2. What extra thing does the conclusion claim?

3. Which word makes the conclusion stronger than the evidence?

Worked Example

Scenario	A survey finds that most students in one art class liked a new grading rubric, so the school says every student will prefer it.
Teacher think-aloud	The evidence is about one class and most students in that class. The conclusion expands to every student in the school. That group and certainty jump is the gap.
Student takeaway	True evidence can still be too narrow for the conclusion.

Guided Classroom Exercise

Invented case. Use only the facts below; write on paper. Try the steps and check your work before reading the model answer. Different wording can be equally adequate.

Situation. Eighteen of 24 students in one art class say they prefer a new grading rubric. The principal announces, 'Every student in our 600-student school prefers it.' No other students were asked.

What To Do

1. Complete: 'The evidence covers ___, but the conclusion covers ___.'

2. Rewrite the conclusion as one sentence that the survey actually supports.

3. Name one additional kind of evidence needed before making a claim about school-wide preferences.

Check before reading the answer. Does your rewrite preserve both the actual sample and the fact that six surveyed students did not prefer the rubric?

Model Answer

The evidence covers 24 students in one art class, but the conclusion covers all 600 students. A majority of the surveyed art class, 18 of 24 students, preferred the new rubric. A school-wide estimate would need a representative sample across classes; even that would not justify saying every student agrees.

Why it is adequate. It narrows the claim to the evidence and separates a statement about a majority from a statement about everyone.

Item Bank

Items are grouped by level. For each item, read the prompt, predict the answer, choose, and then use the feedback and process commentary to examine the reasoning path.

Level 1

Level 1 establishes the clean version of the skill: the cue is direct, the distractors are visible, and the main task is to learn the contrast.

Question 1

Level 1

In a memo about evening bus service for late-shift workers, Riley writes, "During a small trial of extending evening bus service until midnight, late-shift commute complaints fell by 22% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 2

Level 1

Maya says, "Most ninth-grade students asked in a survey liked requiring phone lockers during class. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The claim moves from what most surveyed people liked to what everyone will benefit from.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** The claim talks about benefit, so the next step would be to define what benefit means.

Answer: B. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 3

Level 1

A report says the average result improved after sending medication reminder texts before evening doses. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The average change is used as proof that every individual changed the same way.	**D.** The conclusion comes after the report's result, which is not automatically a mistake.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 4

Level 1

At a planning meeting about a four-day workweek test for software engineers, Avery says, "In one group that tried testing a Monday-through-Thursday workweek, staff resignations fell by 15% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully.	**B.** The argument uses one example, which can be a helpful starting point for discussion.
C. The argument gives the result before stating the recommendation.	**D.** The argument generalizes from one case to every case without enough support.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 5

Level 1

In a memo about larger grocery unit-price labels, Taylor writes, "During a small trial of adding larger unit-price labels on shelf tags, shopper overpayment complaints fell by 27% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. A before-and-after change is used as proof of cause without more evidence.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 6

Level 1

Morgan says, "Most families checking out children's books asked in a survey liked waiving late fines for children's books. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background.	**B.** Most survey approval is used as proof that every affected person will be helped.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: B. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 7

Level 1

A report says the average result improved after requiring two-factor login for site administrators. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The group average is assumed to show what happened to each individual person.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 8

Level 1

At a planning meeting about brighter streetlights on Maple Street, Jordan says, "In one group that tried adding brighter LED streetlights on Maple Street, reported thefts fell by 12% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument gives the result before stating the recommendation.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** One successful example is used as if it proves the result will happen everywhere.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 9

Level 1

In a memo about peer tutoring for first-year statistics students, Riley writes, "During a small trial of expanding peer tutoring in statistics, course pass rates rose by 11% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. The action is assumed to be the cause just because the change came after it.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 10

Level 1

Maya says, "Most lunch customers asked in a survey liked showing calorie labels on printed lunch menus. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background.	**B.** The argument uses ordinary language rather than technical terms.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** Liking the plan is treated as proof that the plan benefits every person affected.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 11

Level 1

A report says the average result improved after sending overdraft warning texts before fees post. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The reasoning stretches an average improvement into the claim that everyone improved.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The argument talks about a group, so individual stories may still be relevant later.

Answer: B. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 12

Level 1

At a planning meeting about timed-entry passes for weekend park trails, Avery says, "In one group that tried using timed-entry passes for weekend trail visits, trail crowding complaints fell by 33% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully.	**B.** The argument uses one example, which can be a helpful starting point for discussion.
C. The argument gives the result before stating the recommendation.	**D.** One group improved, but that does not show all similar settings will improve too.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 13

Level 1

In a memo about free Friday museum admission, Taylor writes, "During a small trial of offering free admission on Fridays, family visits rose by 29% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording.	**B.** The reasoning moves from sequence to cause without checking what else changed.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 14

Level 1

Morgan says, "Most youth soccer players asked in a survey liked adding mandatory sideline concussion checks. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. A survey of most people is assumed to show that every person will benefit.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 15

Level 1

A report says the average result improved after sending donation receipts within one day. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The argument talks about a group, so individual stories may still be relevant later.	**D.** A group-level result is read as if it proves the same result for every person.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 16

Level 1

At a planning meeting about warehouse ergonomic training, Jordan says, "In one group that tried offering monthly lifting-safety and ergonomic training, back-injury claims fell by 20% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. One test is assumed to be enough to show the plan will work in every setting.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 17

Level 1

In a memo about apartment-lobby compost bins, Riley writes, "During a small trial of placing compost bins in apartment lobbies, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** Timing is counted as enough evidence even though another cause could explain the result.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 18

Level 1

Maya says, "Most new app users asked in a survey liked making new user profiles private by default. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. People liking the plan is confused with evidence that the plan helps everyone.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 19

Level 1

A report says the average result improved after reserving same-day appointment slots. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The argument talks about a group, so individual stories may still be relevant later.	**D.** Some people may not improve even when the average does, and the argument misses that.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 20

Level 1

At a planning meeting about seat-zone airline boarding, Avery says, "In one group that tried boarding passengers by seat zone, average boarding time fell by 9% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully.	**B.** A single success becomes a much broader claim than the evidence supports.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** The argument gives the result before stating the recommendation.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 21

Level 1

In a memo about an online apartment repair portal, Taylor writes, "During a small trial of launching an online apartment repair portal, unresolved repair requests fell by 26% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. The memo uses a small trial, which may still provide a clue worth checking.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 22

Level 1

Morgan says, "Most middle-school students asked in a survey liked moving fruit bowls to the front of the cafeteria line. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim moves from what most surveyed people liked to what everyone will benefit from.	**D.** The argument uses ordinary language rather than technical terms.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 23

Level 1

A report says the average result improved after giving support agents weekly script coaching. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The average change is used as proof that every individual changed the same way.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 24

Level 1

At a planning meeting about household water-leak alerts, Jordan says, "In one group that tried sending automatic household water-leak alerts, average household water use fell by 10% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument gives the result before stating the recommendation.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument generalizes from one case to every case without enough support.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 25

Level 1

In a memo about body-camera activation reminders, Riley writes, "During a small trial of sending body-camera activation reminders before patrol shifts, missing-camera-footage reports fell by 35% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. A before-and-after change is used as proof of cause without more evidence.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 26

Level 1

Maya says, "Most mail voters asked in a survey liked offering online mail-ballot tracking. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The argument uses ordinary language rather than technical terms.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** Most survey approval is used as proof that every affected person will be helped.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 27

Level 1

A report says the average result improved after sending spaced-review prompts for language vocabulary. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The group average is assumed to show what happened to each individual person.	**B.** The report uses an average, which can be a useful summary when read carefully.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The argument talks about a group, so individual stories may still be relevant later.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 28

Level 1

At a planning meeting about a beginner gym orientation, Avery says, "In one group that tried offering a beginner gym orientation, new-member cancellations fell by 19% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** One successful example is used as if it proves the result will happen everywhere.
C. The argument gives the result before stating the recommendation.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 29

Level 1

In a memo about safe-driving feedback for policyholders, Taylor writes, "During a small trial of sending weekly safe-driving feedback, reported minor crashes fell by 8% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The action is assumed to be the cause just because the change came after it.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 30

Level 1

Morgan says, "Most newsletter readers asked in a survey liked placing corrections at the top of articles. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. Liking the plan is treated as proof that the plan benefits every person affected.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 31

Level 1

A report says the average result improved after requiring clearer price signs at vendor stalls. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The reasoning stretches an average improvement into the claim that everyone improved.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** The conclusion comes after the report's result, which is not automatically a mistake.

Answer: B. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 32

Level 1

At a planning meeting about hotel quiet-hours text reminders, Jordan says, "In one group that tried sending quiet-hours text reminders to hotel guests, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. One group improved, but that does not show all similar settings will improve too.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** The argument gives the result before stating the recommendation.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Level 2

Level 2 keeps the same skill but adds more realistic wording and more tempting distractors.

Question 33

Level 2

Maya says, "Most late-shift workers asked in a survey liked extending evening bus service until midnight. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The argument uses ordinary language rather than technical terms.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** Most survey approval is used as proof that every affected person will be helped.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 34

Level 2

A report says the average result improved after requiring phone lockers during class. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The group average is assumed to show what happened to each individual person.	**D.** The conclusion comes after the report's result, which is not automatically a mistake.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 35

Level 2

At a planning meeting about medication reminder texts for older patients, Avery says, "In one group that tried sending medication reminder texts before evening doses, missed-dose reports fell by 18% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully.	**B.** One successful example is used as if it proves the result will happen everywhere.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** The argument gives the result before stating the recommendation.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 36

Level 2

In a memo about a four-day workweek test for software engineers, Taylor writes, "During a small trial of testing a Monday-through-Thursday workweek, staff resignations fell by 15% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. A before-and-after change is used as proof of cause without more evidence.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 37

Level 2

Morgan says, "Most weekly grocery shoppers asked in a survey liked adding larger unit-price labels on shelf tags. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background.	**B.** The argument uses ordinary language rather than technical terms.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** Liking the plan is treated as proof that the plan benefits every person affected.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 38

Level 2

A report says the average result improved after waiving late fines for children's books. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The reasoning stretches an average improvement into the claim that everyone improved.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 39

Level 2

At a planning meeting about two-factor login for site administrators, Jordan says, "In one group that tried requiring two-factor login for site administrators, admin account takeovers fell by 44% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** One group improved, but that does not show all similar settings will improve too.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 40

Level 2

In a memo about brighter streetlights on Maple Street, Riley writes, "During a small trial of adding brighter LED streetlights on Maple Street, reported thefts fell by 12% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The action is assumed to be the cause just because the change came after it.	**B.** The evidence comes before the conclusion, which is a normal way to present an argument.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 41

Level 2

Maya says, "Most first-year statistics students asked in a survey liked expanding peer tutoring in statistics. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** A survey of most people is assumed to show that every person will benefit.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 42

Level 2

A report says the average result improved after showing calorie labels on printed lunch menus. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. A group-level result is read as if it proves the same result for every person.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 43

Level 2

At a planning meeting about bank overdraft warning texts, Avery says, "In one group that tried sending overdraft warning texts before fees post, overdraft fees fell by 24% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. One test is assumed to be enough to show the plan will work in every setting.	**B.** The argument gives the result before stating the recommendation.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 44

Level 2

In a memo about timed-entry passes for weekend park trails, Taylor writes, "During a small trial of using timed-entry passes for weekend trail visits, trail crowding complaints fell by 33% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The reasoning moves from sequence to cause without checking what else changed.
C. The memo uses a small trial, which may still provide a clue worth checking.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 45

Level 2

Morgan says, "Most local families asked in a survey liked offering free admission on Fridays. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. People liking the plan is confused with evidence that the plan helps everyone.	**D.** The argument uses ordinary language rather than technical terms.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 46

Level 2

A report says the average result improved after adding mandatory sideline concussion checks. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The report uses an average, which can be a useful summary when read carefully.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** Some people may not improve even when the average does, and the argument misses that.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 47

Level 2

At a planning meeting about same-day donation receipts, Jordan says, "In one group that tried sending donation receipts within one day, donor retention rose by 14% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. A single success becomes a much broader claim than the evidence supports.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** The argument gives the result before stating the recommendation.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 48

Level 2

In a memo about warehouse ergonomic training, Riley writes, "During a small trial of offering monthly lifting-safety and ergonomic training, back-injury claims fell by 20% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** Timing is counted as enough evidence even though another cause could explain the result.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 49

Level 2

Maya says, "Most apartment residents asked in a survey liked placing compost bins in apartment lobbies. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The argument uses ordinary language rather than technical terms.
C. The claim moves from what most surveyed people liked to what everyone will benefit from.	**D.** The survey gives people a chance to react to the idea, which can be useful background.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 50

Level 2

A report says the average result improved after making new user profiles private by default. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** The average change is used as proof that every individual changed the same way.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 51

Level 2

At a planning meeting about same-day clinic appointment slots, Avery says, "In one group that tried reserving same-day appointment slots, patient no-show rates fell by 13% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument generalizes from one case to every case without enough support.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. The argument gives the result before stating the recommendation.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 52

Level 2

In a memo about seat-zone airline boarding, Taylor writes, "During a small trial of boarding passengers by seat zone, average boarding time fell by 9% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** Timing alone is treated as proof of causation, without ruling out other causes.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 53

Level 2

Morgan says, "Most apartment tenants asked in a survey liked launching an online apartment repair portal. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** Most survey approval is used as proof that every affected person will be helped.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 54

Level 2

A report says the average result improved after moving fruit bowls to the front of the cafeteria line. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The group average is assumed to show what happened to each individual person.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 55

Level 2

At a planning meeting about weekly call-center script coaching, Jordan says, "In one group that tried giving support agents weekly script coaching, customer complaint rates fell by 18% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** One successful example is used as if it proves the result will happen everywhere.
C. The argument gives the result before stating the recommendation.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 56

Level 2

In a memo about household water-leak alerts, Riley writes, "During a small trial of sending automatic household water-leak alerts, average household water use fell by 10% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. A before-and-after change is used as proof of cause without more evidence.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 57

Level 2

Maya says, "Most patrol officers asked in a survey liked sending body-camera activation reminders before patrol shifts. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The claim talks about benefit, so the next step would be to define what benefit means.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** Liking the plan is treated as proof that the plan benefits every person affected.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 58

Level 2

A report says the average result improved after offering online mail-ballot tracking. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The reasoning stretches an average improvement into the claim that everyone improved.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 59

Level 2

At a planning meeting about language-learning spaced-review prompts, Avery says, "In one group that tried sending spaced-review prompts for language vocabulary, vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** One group improved, but that does not show all similar settings will improve too.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 60

Level 2

In a memo about a beginner gym orientation, Taylor writes, "During a small trial of offering a beginner gym orientation, new-member cancellations fell by 19% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The action is assumed to be the cause just because the change came after it.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 61

Level 2

Morgan says, "Most auto-insurance policyholders asked in a survey liked sending weekly safe-driving feedback. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The argument uses ordinary language rather than technical terms.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** A survey of most people is assumed to show that every person will benefit.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 62

Level 2

A report says the average result improved after placing corrections at the top of articles. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. A group-level result is read as if it proves the same result for every person.	**D.** The conclusion comes after the report's result, which is not automatically a mistake.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 63

Level 2

At a planning meeting about clearer farmers market price signs, Jordan says, "In one group that tried requiring clearer price signs at vendor stalls, price disputes fell by 28% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. One test is assumed to be enough to show the plan will work in every setting.	**B.** The argument uses one example, which can be a helpful starting point for discussion.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument gives the result before stating the recommendation.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 64

Level 2

In a memo about hotel quiet-hours text reminders, Riley writes, "During a small trial of sending quiet-hours text reminders to hotel guests, noise complaints from guest rooms fell by 30% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording.	**B.** The reasoning moves from sequence to cause without checking what else changed.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Level 3

Level 3 asks for steadier discrimination: the right answer is still objective, but the wrong answers often sound plausible.

Question 65

Level 3

A report says the average result improved after extending evening bus service until midnight. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The reasoning stretches an average improvement into the claim that everyone improved.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: C. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 66

Level 3

At a planning meeting about classroom phone lockers, Avery says, "In one group that tried requiring phone lockers during class, classroom disruption reports fell by 31% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. One group improved, but that does not show all similar settings will improve too.	**B.** The argument uses one example, which can be a helpful starting point for discussion.
C. The argument gives the result before stating the recommendation.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: A. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 67

Level 3

In a memo about medication reminder texts for older patients, Taylor writes, "During a small trial of sending medication reminder texts before evening doses, missed-dose reports fell by 18% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The action is assumed to be the cause just because the change came after it.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 68

Level 3

Morgan says, "Most software engineers asked in a survey liked testing a Monday-through-Thursday workweek. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. Liking the plan is treated as proof that the plan benefits every person affected.	**B.** The claim talks about benefit, so the next step would be to define what benefit means.
C. The argument uses ordinary language rather than technical terms.	**D.** The survey gives people a chance to react to the idea, which can be useful background.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 69

Level 3

A report says the average result improved after adding larger unit-price labels on shelf tags. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. A group-level result is read as if it proves the same result for every person.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 70

Level 3

At a planning meeting about late fines on children's books, Jordan says, "In one group that tried waiving late fines for children's books, library card renewals rose by 19% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. One test is assumed to be enough to show the plan will work in every setting.	**D.** The argument gives the result before stating the recommendation.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 71

Level 3

In a memo about two-factor login for site administrators, Riley writes, "During a small trial of requiring two-factor login for site administrators, admin account takeovers fell by 44% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The reasoning moves from sequence to cause without checking what else changed.

Answer: D. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 72

Level 3

Maya says, "Most residents on Maple Street asked in a survey liked adding brighter LED streetlights on Maple Street. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim talks about benefit, so the next step would be to define what benefit means.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. A survey of most people is assumed to show that every person will benefit.	**D.** The argument uses ordinary language rather than technical terms.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 73

Level 3

A report says the average result improved after expanding peer tutoring in statistics. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. Some people may not improve even when the average does, and the argument misses that.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 74

Level 3

At a planning meeting about calorie labels on restaurant menus, Avery says, "In one group that tried showing calorie labels on printed lunch menus, dessert orders fell by 16% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** A single success becomes a much broader claim than the evidence supports.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument gives the result before stating the recommendation.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 75

Level 3

In a memo about bank overdraft warning texts, Taylor writes, "During a small trial of sending overdraft warning texts before fees post, overdraft fees fell by 24% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** Timing is counted as enough evidence even though another cause could explain the result.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 76

Level 3

Morgan says, "Most weekend trail hikers asked in a survey liked using timed-entry passes for weekend trail visits. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. People liking the plan is confused with evidence that the plan helps everyone.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 77

Level 3

A report says the average result improved after offering free admission on Fridays. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The report uses an average, which can be a useful summary when read carefully.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The average change is used as proof that every individual changed the same way.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 78

Level 3

At a planning meeting about youth soccer concussion checks, Jordan says, "In one group that tried adding mandatory sideline concussion checks, repeat head injuries fell by 21% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. The argument generalizes from one case to every case without enough support.	**D.** The argument gives the result before stating the recommendation.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 79

Level 3

In a memo about same-day donation receipts, Riley writes, "During a small trial of sending donation receipts within one day, donor retention rose by 14% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording.	**B.** Timing alone is treated as proof of causation, without ruling out other causes.
C. The evidence comes before the conclusion, which is a normal way to present an argument.	**D.** The memo uses a small trial, which may still provide a clue worth checking.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 80

Level 3

Maya says, "Most warehouse staff asked in a survey liked offering monthly lifting-safety and ergonomic training. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The claim moves from what most surveyed people liked to what everyone will benefit from.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The argument uses ordinary language rather than technical terms.	**D.** The claim talks about benefit, so the next step would be to define what benefit means.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 81

Level 3

A report says the average result improved after placing compost bins in apartment lobbies. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** The group average is assumed to show what happened to each individual person.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 82

Level 3

At a planning meeting about private-by-default app profiles, Avery says, "In one group that tried making new user profiles private by default, publicly visible profiles fell by 48% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. One successful example is used as if it proves the result will happen everywhere.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 83

Level 3

In a memo about same-day clinic appointment slots, Taylor writes, "During a small trial of reserving same-day appointment slots, patient no-show rates fell by 13% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The argument names the action clearly, so the main problem is not unclear wording.	**B.** The evidence comes before the conclusion, which is a normal way to present an argument.
C. The memo uses a small trial, which may still provide a clue worth checking.	**D.** A before-and-after change is used as proof of cause without more evidence.

Answer: D. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 84

Level 3

Morgan says, "Most domestic flight passengers asked in a survey liked boarding passengers by seat zone. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background.	**B.** The argument uses ordinary language rather than technical terms.
C. Most survey approval is used as proof that every affected person will be helped.	**D.** The claim talks about benefit, so the next step would be to define what benefit means.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 85

Level 3

A report says the average result improved after launching an online apartment repair portal. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The reasoning stretches an average improvement into the claim that everyone improved.	**B.** The report uses an average, which can be a useful summary when read carefully.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The argument talks about a group, so individual stories may still be relevant later.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 86

Level 3

At a planning meeting about fruit placement in a school cafeteria line, Jordan says, "In one group that tried moving fruit bowls to the front of the cafeteria line, fruit purchases rose by 23% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** One group improved, but that does not show all similar settings will improve too.
C. The argument gives the result before stating the recommendation.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 87

Level 3

In a memo about weekly call-center script coaching, Riley writes, "During a small trial of giving support agents weekly script coaching, customer complaint rates fell by 18% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The action is assumed to be the cause just because the change came after it.

Answer: D. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 88

Level 3

Maya says, "Most local homeowners asked in a survey liked sending automatic household water-leak alerts. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** Liking the plan is treated as proof that the plan benefits every person affected.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The survey gives people a chance to react to the idea, which can be useful background.

Answer: B. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 89

Level 3

A report says the average result improved after sending body-camera activation reminders before patrol shifts. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The conclusion comes after the report's result, which is not automatically a mistake.	**B.** The argument talks about a group, so individual stories may still be relevant later.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** A group-level result is read as if it proves the same result for every person.

Answer: D. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

Question 90

Level 3

At a planning meeting about county mail-ballot tracking, Avery says, "In one group that tried offering online mail-ballot tracking, phone calls asking ballot status fell by 42% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** One test is assumed to be enough to show the plan will work in every setting.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 91

Level 3

In a memo about language-learning spaced-review prompts, Taylor writes, "During a small trial of sending spaced-review prompts for language vocabulary, vocabulary retention quiz scores rose by 12% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The reasoning moves from sequence to cause without checking what else changed.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. The memo uses a small trial, which may still provide a clue worth checking.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 92

Level 3

Morgan says, "Most new gym members asked in a survey liked offering a beginner gym orientation. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The claim talks about benefit, so the next step would be to define what benefit means.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** A survey of most people is assumed to show that every person will benefit.

Answer: D. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 93

Level 3

A report says the average result improved after sending weekly safe-driving feedback. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** Some people may not improve even when the average does, and the argument misses that.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: B. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 94

Level 3

At a planning meeting about top-of-article correction boxes, Jordan says, "In one group that tried placing corrections at the top of articles, reader trust ratings rose by 7% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument mentions a measured change, so the number should be checked carefully.	**B.** The argument gives the result before stating the recommendation.
C. The argument uses one example, which can be a helpful starting point for discussion.	**D.** A single success becomes a much broader claim than the evidence supports.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 95

Level 3

In a memo about clearer farmers market price signs, Riley writes, "During a small trial of requiring clearer price signs at vendor stalls, price disputes fell by 28% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** Timing is counted as enough evidence even though another cause could explain the result.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: B. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 96

Level 3

Maya says, "Most overnight hotel guests asked in a survey liked sending quiet-hours text reminders to hotel guests. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** The claim talks about benefit, so the next step would be to define what benefit means.
C. People liking the plan is confused with evidence that the plan helps everyone.	**D.** The survey gives people a chance to react to the idea, which can be useful background.

Answer: C. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Level 4

Level 4 asks learners to hold more context in mind while applying the same method.

Question 97

Level 4

At a planning meeting about evening bus service for late-shift workers, Avery says, "In one group that tried extending evening bus service until midnight, late-shift commute complaints fell by 22% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument gives the result before stating the recommendation.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** One test is assumed to be enough to show the plan will work in every setting.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 98

Level 4

In a memo about classroom phone lockers, Taylor writes, "During a small trial of requiring phone lockers during class, classroom disruption reports fell by 31% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** The argument names the action clearly, so the main problem is not unclear wording.
C. The reasoning moves from sequence to cause without checking what else changed.	**D.** The evidence comes before the conclusion, which is a normal way to present an argument.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 99

Level 4

Morgan says, "Most patients over 60 asked in a survey liked sending medication reminder texts before evening doses. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The argument uses ordinary language rather than technical terms.	**B.** A survey of most people is assumed to show that every person will benefit.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The survey gives people a chance to react to the idea, which can be useful background.

Answer: B. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 100

Level 4

A report says the average result improved after testing a Monday-through-Thursday workweek. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. A group-level result is read as if it proves the same result for every person.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** The argument talks about a group, so individual stories may still be relevant later.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 101

Level 4

At a planning meeting about larger grocery unit-price labels, Jordan says, "In one group that tried adding larger unit-price labels on shelf tags, shopper overpayment complaints fell by 27% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument mentions a measured change, so the number should be checked carefully.
C. The argument gives the result before stating the recommendation.	**D.** A single success becomes a much broader claim than the evidence supports.

Answer: D. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 102

Level 4

In a memo about late fines on children's books, Riley writes, "During a small trial of waiving late fines for children's books, library card renewals rose by 19% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The evidence comes before the conclusion, which is a normal way to present an argument.	**B.** The memo uses a small trial, which may still provide a clue worth checking.
C. Timing is counted as enough evidence even though another cause could explain the result.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: C. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 103

Level 4

Maya says, "Most site administrators asked in a survey liked requiring two-factor login for site administrators. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. The survey gives people a chance to react to the idea, which can be useful background.	**B.** People liking the plan is confused with evidence that the plan helps everyone.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: B. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 104

Level 4

A report says the average result improved after adding brighter LED streetlights on Maple Street. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. Some people may not improve even when the average does, and the argument misses that.	**B.** The conclusion comes after the report's result, which is not automatically a mistake.
C. The report uses an average, which can be a useful summary when read carefully.	**D.** The argument talks about a group, so individual stories may still be relevant later.

Answer: A. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

B. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 105

Level 4

At a planning meeting about peer tutoring for first-year statistics students, Avery says, "In one group that tried expanding peer tutoring in statistics, course pass rates rose by 11% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** The argument generalizes from one case to every case without enough support.
C. The argument mentions a measured change, so the number should be checked carefully.	**D.** The argument uses one example, which can be a helpful starting point for discussion.

Answer: B. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 106

Level 4

In a memo about calorie labels on restaurant menus, Taylor writes, "During a small trial of showing calorie labels on printed lunch menus, dessert orders fell by 16% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. Timing alone is treated as proof of causation, without ruling out other causes.	**B.** The evidence comes before the conclusion, which is a normal way to present an argument.
C. The memo uses a small trial, which may still provide a clue worth checking.	**D.** The argument names the action clearly, so the main problem is not unclear wording.

Answer: A. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 107

Level 4

Morgan says, "Most checking-account customers asked in a survey liked sending overdraft warning texts before fees post. So every person affected will benefit from it." What is the logical gap in Morgan's reasoning?

A. The claim moves from what most surveyed people liked to what everyone will benefit from.	**B.** The survey gives people a chance to react to the idea, which can be useful background.
C. The claim talks about benefit, so the next step would be to define what benefit means.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 108

Level 4

A report says the average result improved after using timed-entry passes for weekend trail visits. Casey concludes, "That means every person in the group improved." What is the logical gap in Casey's reasoning?

A. The argument talks about a group, so individual stories may still be relevant later.	**B.** The average change is used as proof that every individual changed the same way.
C. The conclusion comes after the report's result, which is not automatically a mistake.	**D.** The report uses an average, which can be a useful summary when read carefully.

Answer: B. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 109

Level 4

At a planning meeting about free Friday museum admission, Jordan says, "In one group that tried offering free admission on Fridays, family visits rose by 29% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Jordan's reasoning?

A. The argument uses one example, which can be a helpful starting point for discussion.	**B.** The argument gives the result before stating the recommendation.
C. One successful example is used as if it proves the result will happen everywhere.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 110

Level 4

In a memo about youth soccer concussion checks, Riley writes, "During a small trial of adding mandatory sideline concussion checks, repeat head injuries fell by 21% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Riley's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** The evidence comes before the conclusion, which is a normal way to present an argument.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** A before-and-after change is used as proof of cause without more evidence.

Answer: D. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

D. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

Question 111

Level 4

Maya says, "Most first-time donors asked in a survey liked sending donation receipts within one day. So every person affected will benefit from it." What is the logical gap in Maya's reasoning?

A. Most survey approval is used as proof that every affected person will be helped.	**B.** The claim talks about benefit, so the next step would be to define what benefit means.
C. The survey gives people a chance to react to the idea, which can be useful background.	**D.** The argument uses ordinary language rather than technical terms.

Answer: A. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is A because it names the jump the argument makes.

A. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

B. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

C. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

D. Not correct. This does not identify the inference problem. The logical gap is moving from most surveyed people to every affected person. Liking a plan also does not prove the plan helps.

Question 112

Level 4

A report says the average result improved after offering monthly lifting-safety and ergonomic training. Sam concludes, "That means every person in the group improved." What is the logical gap in Sam's reasoning?

A. The report uses an average, which can be a useful summary when read carefully.	**B.** The group average is assumed to show what happened to each individual person.
C. The argument talks about a group, so individual stories may still be relevant later.	**D.** The conclusion comes after the report's result, which is not automatically a mistake.

Answer: B. The logical gap is that an average can go up even when some people do not improve.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is B because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

B. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is that an average can go up even when some people do not improve.

C. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

D. Not correct. This does not identify the inference problem. The logical gap is that an average can go up even when some people do not improve.

Question 113

Level 4

At a planning meeting about apartment-lobby compost bins, Avery says, "In one group that tried placing compost bins in apartment lobbies, landfill waste from participating buildings fell by 17% compared with the four weeks before the test. So this plan will work in every similar setting." What is the logical gap in Avery's reasoning?

A. The argument gives the result before stating the recommendation.	**B.** The argument uses one example, which can be a helpful starting point for discussion.
C. One group improved, but that does not show all similar settings will improve too.	**D.** The argument mentions a measured change, so the number should be checked carefully.

Answer: C. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is C because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

B. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

C. Correct. This names the step in the reasoning that does not follow from the evidence. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

D. Not correct. This does not identify the inference problem. The logical gap is the jump from one case to every case. One success does not prove the same thing will happen everywhere.

Question 114

Level 4

In a memo about private-by-default app profiles, Taylor writes, "During a small trial of making new user profiles private by default, publicly visible profiles fell by 48% compared with the four weeks before the test. So the action caused the change." What is the logical gap in Taylor's reasoning?

A. The memo uses a small trial, which may still provide a clue worth checking.	**B.** The evidence comes before the conclusion, which is a normal way to present an argument.
C. The argument names the action clearly, so the main problem is not unclear wording.	**D.** The action is assumed to be the cause just because the change came after it.

Answer: D. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

How to work it out. To uncover the answer, state exactly what the evidence shows, then compare it with what the conclusion adds. The correct choice is D because it names the jump the argument makes.

A. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

B. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.

C. Not correct. This does not identify the inference problem. The logical gap is treating timing as proof of cause. Something happening first does not, by itself, prove it caused what came next.
